PROFESSIONAL SUMMARY

Strategic and results-driven Lead Java Engineer with over 10 years of experience in backend development, software architecture, and engineering team leadership. Proven expertise in building scalable eCommerce systems using Java, Spring, and microservices architecture deployed on cloud infrastructure (GCP). Adept at improving system performance, driving technical vision, optimizing workflows, and aligning engineering execution with business goals. Passionate about fostering collaborative development environments, conducting rigorous code reviews, and continuously enhancing productivity and delivery speed.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Spring Boot, Kotlin, JavaScript, TypeScript, Python
- **Architecture:** Microservices, Event-Driven Architecture, REST APIs, Domain-Driven Design
- **Cloud & Infrastructure:** Google Cloud Platform (GCP), AWS, Docker, Kubernetes, Terraform, CI/CD, DevOps
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Tools & Platforms:** Git, GitHub Actions, Bitbucket, Jenkins, JIRA, Confluence, IntelliJ
- **Testing & QA:** JUnit, Mockito, TestContainers, Postman
- **Leadership & Methodologies:** Agile, Scrum, Sprint Planning, KPI setting, OKRs, Cross-functional Collaboration

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led backend development for high-availability eCommerce solutions, designing scalable systems using Java Spring Boot and GCP with microservices-based architecture.
- Collaborated directly with business stakeholders and the CEO to convert requirements into technical strategy, aligning sprint objectives with revenue-focused KPIs.
- Managed a cross-functional team of 8 engineers, establishing CI/CD pipelines, writing deployment scripts, and improving code integration workflows for rapid release cycles.
- Optimized legacy systems by implementing event-driven patterns, reducing processing latency by over 35% and enhancing concurrent order handling.
- Instituted a culture of code quality via mandatory peer code reviews, test automation protocols, and performance monitoring on backend APIs.
- Architected data models to accommodate high-volume vendor and product onboarding, ensuring reliable syncing across multiple third-party inventory systems.

- Conducted backend audits to identify inefficiencies, reducing GCP compute costs by 27% through architecture redesign and memory usage tuning.
- Championed DevOps-first practices by embedding observability tools, containerizing services with Docker, and leading IaC adoption using Terraform.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed and maintained core backend services using Java and Spring Boot to support the company's dynamic digital marketing campaigns and eCommerce integrations.
- Designed asynchronous job processing using Kafka to manage high-volume data workflows, reducing campaign delivery time by 50% during peak demand.
- Mentored junior developers, conducted onboarding training, and supported career development through regular 1:1s and performance feedback.
- Introduced modular API designs and OpenAPI specs that improved integration with third-party partners and reduced onboarding time by 40%.
- Spearheaded migration to containerized deployments using Docker and GCP Cloud Run, leading to more scalable and cost-effective deployments.
- Defined clear team KPIs and introduced agile sprint cadences, improving sprint velocity and delivery consistency across multiple project streams.
- Led technical retrospectives to assess architectural bottlenecks, resulting in system refactoring that improved database response time by 60%.
- Coordinated cross-departmental initiatives with marketing and sales teams to align development features with conversion funnel objectives.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built internal CRM and inventory modules for B2B eCommerce clients using Java, JSP, and Spring MVC, later refactored into Spring Boot microservices.
- Worked directly with product and customer success teams to define requirements, implement A/B features, and iterate based on live customer feedback.
- Integrated third-party logistics (3PL) APIs into the backend system, ensuring real-time sync of inventory and order tracking for international shipments.
- Refactored batch job handlers for data import/export into efficient, reusable services that cut processing times from hours to under 15 minutes.
- Implemented unit and integration test suites that increased code coverage by over 65%, reducing bug reports and time-to-resolution.
- Participated in architectural planning and early adoption of Docker to containerize legacy services for consistent local and production environments.
- Managed uptime SLAs by contributing to backend monitoring strategies with Prometheus and custom alerting rules for critical endpoints.
- Supported product scaling efforts by stress-testing services and identifying optimal load-balancing strategies using HAProxy and GCP backend services.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Developed reusable backend components for a custom CMS powering multi-brand eCommerce storefronts using Spring Boot and PostgreSQL.
- Participated in architectural planning meetings and backend infrastructure refactoring sessions to improve maintainability and modularity.
- Built backend data synchronization services between the CMS and product catalog APIs using scheduled cron jobs and data mapping utilities.
- Enhanced caching layers using Redis for frequently accessed product metadata and category hierarchies, improving frontend load time by 20%.
- Created RESTful services and integrated JWT-based authentication to secure internal admin APIs from unauthorized access.
- Introduced Swagger documentation to help frontend teams consume and test backend services with greater autonomy.
- Collaborated on QA initiatives and contributed to establishing automated test pipelines with JUnit and Mockito.
- Delivered high-priority hotfixes to production systems with minimal downtime, following a rollback-safe deployment strategy.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Supported senior developers in building backend features for a logistics management platform, contributing REST APIs using Java and Spring MVC.
- Built admin dashboards and inventory screens in AngularJS, integrating data from backend services via secured API endpoints.
- Participated in daily scrum stand-ups and sprint planning, gaining firsthand experience in Agile development workflows.
- Implemented SQL queries and indexed table structures to speed up report generation by logistics teams during peak periods.
- Helped test and validate new features using Postman, JUnit, and manual test scenarios, contributing to a smooth QA cycle.
- Shadowed technical leads during architectural meetings and documentation writing to learn software design principles and documentation practices.
- Created internal documentation for recurring developer tasks, helping improve onboarding for subsequent interns.
- Actively participated in knowledge-sharing sessions, improving Java and version control skills with Git and GitHub.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Google Professional Cloud Architect** – Issued 2023
- ❖ **Oracle Certified Professional: Java SE 11 Developer** – Issued 2022

- ❖ **Certified Kubernetes Application Developer (CKAD)** – Issued 2022
 - ❖ **Spring Professional Certification (VMware)** – Issued 2021
-

PROJECTS

- ✓ **VendorConnect (2023 – 2024)**
Architected and led the development of a scalable vendor onboarding system for an eCommerce platform, integrating third-party logistics, product catalog sync, and automated pricing engines using Java, Spring Boot, and GCP.
- ✓ **LogiSync ERP (2020 – 2021)**
Designed microservices to manage warehouse inventory and fulfillment automation across distributed hubs. Reduced API response time by 50% and improved uptime via retry queues and cloud-native failover handling.
- ✓ **InsightBot (2018 – 2019)**
Built a backend analytics engine to generate customer segmentation and conversion trends using event-driven architecture and scheduled jobs. Helped the marketing team personalize content and increase ROI.
