

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Senior Software Engineer with 9+ years of full-stack development expertise, specializing in Java, Spring Boot, Node.js, and enterprise-grade API solutions. Adept in microservice architecture, API gateways, and performance optimization. Passionate about building scalable systems in cloud-native environments. Seeking to bring hands-on expertise and drive innovation as a Full-Stack API Engineer within a high-impact team.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Spring Boot, JavaScript, Node.js, TypeScript, Express.js
- **API & Architecture:** REST, GraphQL, Apigee, IBM API Connect, AWS API Gateway, OAuth2, Swagger
- **Cloud & DevOps:** AWS, GCP, Docker, Kubernetes, Lambda, Terraform
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis
- **Tools & CI/CD:** Git, GitLab CI/CD, Jenkins, Jira, Confluence, ServiceNow
- **Testing:** JUnit, Mockito, Postman, Newman, K6
- **Other:** Event-driven architecture, Message Queues (Kafka, RabbitMQ), System Design

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and developed scalable RESTful APIs and event-driven microservices using Java (Spring Boot) and Node.js for high-load applications serving thousands of concurrent users.
- Integrated AWS API Gateway and Lambda functions to enable serverless APIs with strict latency thresholds and high availability across multiple regions.
- Led migration from monolithic systems to microservices, optimizing for API governance, modularity, and secure OAuth2 token-based access control.
- Built enterprise-level authentication flows with OAuth2 and JWT for both internal and public-facing APIs, ensuring secure and auditable integrations.
- Created reusable API templates and implemented centralized logging across distributed services using Kafka and GCP Pub/Sub.
- Collaborated with QA and DevOps to build and execute performance and stress tests using K6 and Postman collections, reducing endpoint response time by 30%.

- Documented APIs using Swagger/OpenAPI and integrated lifecycle management with Apigee and IBM API Connect for internal teams.
- Participated in daily Agile ceremonies and used Jira and Confluence for sprint planning, backlog refinement, and cross-functional collaboration.
- Monitored API reliability and health using GCP operations suite and AWS CloudWatch, reducing API downtime by 90% over 6 months.
- Trained junior developers on secure coding, event-driven principles, and RESTful design patterns for scalable enterprise APIs.
- Developed custom middleware for Express.js and Java filters to implement advanced API gateway policies like rate-limiting, IP filtering, and access logging.
- Refactored legacy backend services into modular components, reducing codebase complexity and onboarding time for new developers.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built backend services and public-facing APIs using Spring Boot and integrated them with third-party marketing tools via webhooks and RESTful endpoints.
- Delivered APIs using Node.js and Express for campaign automation and reporting dashboards, enabling end-to-end insight into user engagement.
- Worked on OAuth2 integration with external identity providers, implementing SSO and secure token storage across multiple environments.
- Applied AWS API Gateway and Lambda for event-based triggers, such as email/SMS notifications, reducing operational overhead and cost.
- Contributed to implementation of Kafka-based message pipelines for asynchronous data ingestion and real-time analytics.
- Improved API reliability and uptime by applying circuit breaker patterns and fallback strategies using Spring Cloud and Hystrix.
- Defined API contracts and versioning strategies that allowed seamless rollout and backward compatibility for partner systems.
- Managed containerized deployment of services using Docker and Kubernetes across staging and production.
- Built custom dashboards for tracking API usage, latency, and failure patterns; enabled proactive incident detection and SLA adherence.
- Configured CI/CD pipelines with GitLab to automate code checks, unit testing, and deployment.
- Mentored junior devs on Spring framework, test-driven development, and API scalability.
- Implemented encrypted audit trails for sensitive operations, ensuring compliance with GDPR and internal data handling policies.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed internal systems with Java and Node.js to manage resource allocation, employee onboarding, and digital document signing workflows.
- Created APIs for system integrations with HR and payroll providers, optimizing XML/JSON transformation and validation.
- Built reusable Node.js modules for email queuing and file processing using SQS and S3 on AWS.
- Led the development of performance benchmarks for REST APIs, profiling Java code with JVisualVM and async threads tuning.

- Maintained MySQL and PostgreSQL databases, added index optimization and query tuning, improving query speed by 40%.
- Integrated OAuth2 and LDAP-based login flow for internal user role-based access control.
- Implemented middleware layers to abstract business logic and handle cross-cutting concerns like logging and validation.
- Worked closely with cross-regional teams in Spain and Estonia, facilitating API design standards across teams.
- Optimized AWS EC2 hosting by replacing high-usage instances with containerized alternatives, cutting monthly cost by 25%.
- Introduced monitoring dashboards using Grafana and Prometheus for real-time API visibility and alerting.
- Converted legacy SOAP APIs into RESTful equivalents while maintaining compatibility with dependent clients.
- Automated documentation sync from Postman collections to Swagger Hub to streamline stakeholder collaboration.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Built internal management portals using Spring Boot and Thymeleaf, exposing REST endpoints for mobile and web clients.
- Migrated monolithic Java backend to modular Spring services, enabling parallel team development and reduced deployment risk.
- Authored documentation and developer onboarding material covering key API use cases, security policies, and integration guidelines.
- Developed role-based access control policies using Spring Security and integrated with custom authentication server.
- Optimized API response performance via caching layers using Redis and GCP Memorystore.
- Provided support for integration testing and QA automation pipelines, including Postman and Selenium scripts.
- Participated in weekly product demos and user feedback sessions to drive API usability improvements.
- Integrated Jenkins CI with Maven builds and Docker image generation for repeatable deployments.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in building APIs using Java and PHP for educational platforms, integrating basic auth and later migrating to token-based flows.
- Developed reusable templates for API input validation, error responses, and logging for backend services.
- Managed bug tracking and documentation using Jira and Confluence for continuous improvement.
- Implemented MongoDB-backed services for user content storage, including version control and rollback features.
- Helped configure cron-based reporting tools that pulled data from APIs and stored aggregated analytics in PostgreSQL.
- Shadowed senior engineers on API integration tasks with payment processors and third-party identity services.
- Learned best practices for scalable REST API design, rate-limiting, and monitoring.
- Created unit test cases using JUnit for backend modules and participated in weekly code reviews.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Solutions Architect – Associate
 - ❖ Apigee API Engineer – Google Cloud
 - ❖ Java Spring Professional Certification – Oracle
 - ❖ Advanced API Security with OAuth2 – Coursera
-

PROJECTS

Cloud API Analytics Platform

- Built a centralized dashboard to analyze usage, error trends, and performance metrics across AWS and GCP-hosted APIs using Apigee and AWS API Gateway integrations.

Event-Based Payroll System

- Led architecture and development of an event-driven payroll processing platform with Java (Spring Boot) and Kafka, supporting real-time employee data sync across systems.

OAuth2 Identity Broker Service

- Developed a lightweight OAuth2 server supporting access token issuance, refresh tokens, and multi-client registration for internal applications.
