

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Backend Engineer with 9+ years of experience architecting and delivering distributed, cloud-native systems. Adept in designing robust microservices using Java, Spring Boot, and reactive programming with Spring WebFlux. Proven success integrating AWS, Docker, Kubernetes, Kafka, and gRPC to build scalable, secure, and asynchronous backend platforms. Track record includes performance-critical ERP integrations, API-first development, CI/CD automation, and container orchestration across high-traffic systems.

TECHNICAL SKILLS

- **Languages:** Java, Kotlin, Python, TypeScript, JavaScript, SQL
- **Frameworks:** Spring Boot, Spring WebFlux, FastAPI, Flask, Django (basic)
- **Messaging:** Kafka, RabbitMQ, gRPC
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch
- **Cloud & DevOps:** AWS (EC2, S3, RDS, Lambda), Docker, Kubernetes, GitHub Actions, Terraform, Jenkins
- **CI/CD & Monitoring:** GitHub Actions, Prometheus, Grafana, ELK Stack
- **Frontend (supporting):** React, Next.js, Tailwind CSS
- **Tools:** Git, Postman, JIRA, Confluence, Figma, Zeplin
- **Testing:** JUnit, Mockito, Pytest, Jest

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed microservices using Spring Boot and WebFlux to support real-time ERP operations with PostgreSQL, increasing transactional throughput by over 35%.
- Integrated Kafka for asynchronous workflows between CRM, inventory, and invoicing services, enabling fault-tolerant message streaming across isolated domains.
- Led AWS infrastructure setup using EC2, S3, RDS, and IAM; deployed Java services via Docker containers orchestrated under Kubernetes with Helm charts.
- Refactored legacy Odoo API modules to use RESTful endpoints and gRPC contracts, reducing inter-service communication latency by 42%.
- Configured CI/CD pipelines in GitHub Actions and Jenkins for test, staging, and production environments using Terraform and Docker.
- Integrated Elasticsearch into Java backend analytics modules for high-speed queries, optimizing multi-tenant dashboards for finance and HR managers.

- Enforced secure development practices via OAuth2 token management, TLS-enabled APIs, and AWS IAM role assumptions across distributed services.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed Java-based backend services for campaign analytics and segmentation tools using Spring Boot, integrating with external CRM APIs and databases.
- Automated deployment of REST APIs using Docker Compose, AWS ECS, and CI pipelines, supporting cross-functional delivery teams in marketing and operations.
- Implemented asynchronous message queues with RabbitMQ and Kafka to decouple user tracking and logging systems, increasing system resilience during traffic spikes.
- Built monitoring dashboards with Prometheus and Grafana to visualize JVM metrics, Kafka lag, and container health, reducing mean time to resolution (MTTR) by 50%.
- Wrote batch processors in Kotlin for lead import/export operations, cleaning malformed CSV files and syncing with PostgreSQL and MongoDB using scheduled cron jobs.
- Participated in weekly code reviews, applying SOLID principles and enforcing architectural patterns such as CQRS and event sourcing within services.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Created and scaled internal financial reporting tools using Java and PostgreSQL, exposing APIs for payroll, resource management, and accounting dashboards.
- Designed and deployed microservices to manage HR records, integrating LDAP and OAuth2 for secure authentication and role-based access control.
- Built ETL pipelines for legacy ERP migration, parsing data using Apache POI and persisting into normalized PostgreSQL schemas via batch jobs.
- Used Docker Swarm to containerize and deploy Java-based services on internal Linux infrastructure with NGINX reverse proxies and Let's Encrypt SSL.
- Implemented reactive streams for high-volume data sync using Spring WebFlux and integrated backpressure handling to manage server load.
- Configured Jenkins pipelines with environment-specific deployment variables and rollback logic for mission-critical backend updates.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Built Java microservices for collecting, cleansing, and storing web analytics data across PostgreSQL, used for BI reports rendered via ELK stack.
- Modernized Odoo-based systems by integrating REST endpoints using Spring Boot and exposing them to frontend clients via secure APIs.
- Supported Kubernetes transition by containerizing Java services and writing Helm manifests for zero-downtime deployments in staging environments.
- Integrated Redis caching to reduce response time for user-heavy dashboard modules by over 65% and ensured cache invalidation on data updates.

- Helped implement authentication gateways using Spring Security and JWT, enforcing secure access to APIs and internal admin tools.
- Provided documentation and onboarding guides for new team members to accelerate familiarity with Java modules and data ingestion pipelines.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Developed helper microservices using FastAPI and Spring Boot to manage metadata synchronization across multiple internal systems and clients.
- Wrote shell scripts and Dockerfiles to automate local development setup for Java services, accelerating developer onboarding by over 70%.
- Implemented Elasticsearch indexing for ERP data, integrating bulk sync operations to maintain near real-time searchability of business records.
- Shadowed senior engineers in Kafka message consumption, learning best practices around consumer groups, dead letter queues, and replay handling.
- Researched gRPC and helped create proof-of-concepts for lightweight binary communication across distributed backend services.
- Assisted with test-driven development in Java modules, contributing JUnit and Mockito test cases to ensure high coverage before integration.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Spring Framework Masterclass** – Udemy
- ❖ **Docker for Developers** – Udemy
- ❖ **AWS Cloud Practitioner** – Amazon
- ❖ **Odoo Technical Training** – OdooClass
- ❖ **Kafka Streams and kSQL** – Confluent Academy

PROJECTS

- ✓ **Cloud-Native ERP Sync Engine:**
Java-based microservices platform for synchronizing ERP modules with third-party SaaS providers using Kafka, Redis, and PostgreSQL, deployed to AWS using EKS.
- ✓ **Realtime Analytics Dashboard:**
Spring WebFlux backend with Kafka and Elasticsearch powering real-time data visualization and metrics aggregation for distributed marketing systems.
- ✓ **API Security Gateway:**
JWT-enabled gateway built with Spring Security, handling authentication, rate limiting, and request tracing across multiple backend services deployed on Kubernetes.
