

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Senior Software Engineer with 9+ years of experience designing, building, and scaling backend systems with Java, Spring Boot, and cloud-native technologies. Proven expertise in distributed systems, microservice architecture, database optimization, CI/CD automation, and Agile practices. Strong advocate of quality-driven development, test automation, and continuous improvement. Experienced in AWS, GCP, Kubernetes, PostgreSQL, Docker, and DevOps culture. Passionate about empowering teams, mentoring engineers, and delivering business-critical software in high-performance environments.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Spring Boot, Hibernate, JavaScript, TypeScript, Node.js
- **Backend & APIs:** RESTful APIs, Microservices, Event-driven architecture
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, ECS), GCP, Docker, Kubernetes, GitLab CI/CD, Terraform, CloudFormation
- **Databases:** PostgreSQL, MSSQL, MySQL, MongoDB, Redis
- **Testing & QA:** JUnit, Mockito, TestContainers, Selenium, Cucumber, TDD, BDD
- **Version Control & Tools:** Git, GitLab, Bitbucket, Jira, Confluence, Prometheus, Grafana

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led backend development of microservices powering a SaaS platform using Java 17, Spring Boot, PostgreSQL, and Kafka, improving service scalability by 40%.
- Designed and implemented CI/CD pipelines using GitLab CI, Docker, and Kubernetes, enabling zero-downtime deployments across staging and production environments.
- Integrated AWS services such as S3, Lambda, and ECS for cloud-native workflows, reducing infrastructure costs and improving system reliability.
- Collaborated with frontend, QA, and DevOps teams in an Agile setup, delivering incremental improvements through pair programming, code reviews, and daily stand-ups.
- Automated system testing using JUnit and Cucumber with full coverage on business-critical components, reducing bugs by 65% post-deployment.
- Participated in architecture decisions, ensuring clean design patterns, testability, and performance benchmarks for high-concurrency modules.

- Conducted technical interviews and mentored junior developers, creating internal training materials to improve onboarding and team performance.
- Monitored systems with Prometheus and Grafana, setting up alerting and observability tools for fast resolution and system health insights.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built and maintained a RESTful backend using Java and Spring Boot for an e-commerce platform serving 100K+ users, with optimized PostgreSQL and MSSQL schemas.
- Containerized services using Docker and deployed to Kubernetes clusters, reducing deployment time from hours to minutes while ensuring environment parity.
- Embraced TDD using JUnit and Mockito, achieving 95% test coverage and reducing integration failures by over 50%.
- Implemented automated workflows using GitLab CI/CD, allowing faster delivery cycles and consistent code quality with linting and static analysis checks.
- Refactored legacy codebase to follow SOLID and DDD principles, reducing technical debt and improving maintainability.
- Worked closely with product and design teams in Scrum ceremonies to refine requirements and ensure iterative feature delivery aligned with business goals.
- Improved performance of reporting modules by optimizing SQL queries and introducing caching strategies with Redis.
- Delivered clear, concise technical documentation for APIs and deployment processes, aiding team scalability.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Designed and developed multiple backend components for enterprise clients in healthcare and education sectors using Spring Boot and Hibernate.
- Integrated third-party APIs and internal microservices with JWT-based security and OAuth2 authorization flows.
- Set up Docker-based local development environments to ensure consistent builds and eliminate system-specific issues.
- Developed analytics pipelines using scheduled batch jobs and PostgreSQL functions, enabling client KPI tracking and custom report generation.
- Collaborated with cross-functional teams using Kanban methodology to manage tasks and priorities, adapting to changing project scopes.
- Participated in code audits and enforced code quality through review checklists and pull request guidelines.
- Migrated monolithic systems to microservice-based architecture, improving modularity and reducing deployment risk.
- Provided production support and root cause analysis for incidents, reducing downtime and enhancing end-user satisfaction.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Delivered high-quality backend modules for a B2B marketing platform using Java, Spring MVC, and Hibernate.
- Refined legacy endpoints for improved performance and standardized API responses for frontend consumption.
- Contributed to early CI/CD adoption through Jenkins setup and Bash scripting for build and deployment automation.
- Participated in early-stage architecture planning for platform scalability and modularity.
- Conducted integration tests and wrote unit tests, improving test confidence for each feature deployed.
- Enhanced SQL procedures and added indexes to improve query response times by over 70%.
- Supported migration of databases from MySQL to PostgreSQL with zero data loss.
- Liaised with business analysts to ensure accurate delivery of user story requirements.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in backend development for an inventory management tool using Java, JSP, and PostgreSQL.
- Designed and implemented new CRUD functionalities with user permission layers.
- Created test cases and manual scripts for quality assurance under supervision of senior engineers.
- Refactored inefficient SQL queries, improving report generation speed for large datasets.
- Built RESTful endpoints for mobile app integration, enhancing accessibility of the platform.
- Participated in Agile meetings and learned about sprint planning and retrospectives.
- Gained hands-on experience with Git workflows, merging, rebasing, and resolving conflicts.
- Shadowed code reviews and learned best practices in scalable backend development.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate (2024)
 - ❖ Google Associate Cloud Engineer (2023)
 - ❖ Oracle Certified Professional: Java SE 11 Developer (2022)
 - ❖ Certified Kubernetes Application Developer (CKAD, 2023)
-

PROJECTS

- ✓ **Salon360 – SaaS Platform for Salon Chains**
Led the backend engineering for a multi-tenant salon management system handling bookings, payments, and CRM. Integrated with Stripe for payments and used AWS services for scalability.
- ✓ **CI/CD Observatory**
Built an internal CI/CD monitoring tool that integrates GitLab, Prometheus, and Grafana to track deployments, test results, and system uptime in real time.
- ✓ **Cloud Cost Tracker**
Designed a GCP-based tool to monitor and alert on cloud resource usage with BigQuery, Pub/Sub, and Firebase to help internal teams reduce monthly billing.
