

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 9+ years of experience in full-stack and backend development, specializing in **Java, Neo4j graph databases, and AWS cloud solutions**. Skilled in building scalable distributed systems, optimizing complex data models, and delivering production-grade solutions in highly transactional and international environments. Proven track record of leading cloud migrations, architecting graph-driven platforms, and mentoring teams in modern DevOps practices. Strong expertise across **SQL/NoSQL, AWS, GCP, and distributed microservices** with hands-on delivery in automotive, finance, and digital transformation projects.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Spring Boot, Jakarta EE, C#, .NET Core, Python, JavaScript, TypeScript, PHP
- **Databases:** Neo4j, PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Cassandra
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, RDS, CloudFormation, ECS), GCP (GKE, BigQuery, Pub/Sub), Azure DevOps, Docker, Kubernetes, Terraform, CI/CD Pipelines
- **Architectures:** Microservices, Event-Driven Systems, Graph-Based Data Models, Domain-Driven Design, API-First Development
- **Other Tools:** Git, Jira, Jenkins, Kafka, RabbitMQ, Elasticsearch, REST, GraphQL

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented **Java backend microservices integrated with Neo4j graph databases** to power recommendation and catalog features for enterprise clients in e-commerce and automotive sectors.
- Migrated core services to **AWS cloud infrastructure**, leveraging ECS, S3, and RDS while introducing IaC via Terraform and CloudFormation to automate scalable deployments.
- Engineered advanced **graph traversal queries in Neo4j** to optimize parts catalogue lookups, reducing query response times by 45% in production environments.
- Collaborated in a distributed international team, conducting **technical reviews, architecture discussions, and cross-functional design sessions** to ensure scalable backend delivery.

- Enhanced resilience of distributed systems by implementing **event-driven Kafka pipelines** for real-time synchronization across services, improving consistency and fault tolerance.
- Developed **monitoring and observability solutions** with AWS CloudWatch, Grafana, and ELK stack, enabling proactive incident response and improving SLA compliance.
- Mentored junior engineers in **Java best practices, graph database modeling, and cloud-native patterns**, ensuring high-quality, maintainable codebases.
- Acted as a key contributor in **automotive parts catalogue modernization project**, integrating global supplier data sources into a unified AWS-Neo4j ecosystem.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built and maintained backend APIs in **Java and Spring Boot**, integrated with MySQL and MongoDB, supporting marketing automation and analytics products.
- Led the design of **AWS-hosted services** with EC2 and Lambda, ensuring scalability and secure deployment of business-critical applications.
- Designed and implemented **NoSQL caching solutions** using Redis to reduce database load and achieve sub-second response times under high traffic.
- Contributed to development of **graph-based relationship models** in Neo4j for targeted campaign personalization, resulting in increased engagement rates.
- Streamlined CI/CD delivery pipelines with Jenkins and Docker, introducing automated tests and reducing release cycle times by 30%.
- Integrated third-party APIs and built secure OAuth2 authentication flows to ensure compliance with industry security standards.
- Coordinated closely with product managers and clients to translate requirements into **scalable backend architecture designs**.
- Delivered production systems used by enterprise clients in **telecommunications and automotive retail**, supporting millions of user interactions monthly.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed enterprise applications in **Java and .NET Core**, focusing on backend microservices and modular monolith refactoring into distributed systems.
- Designed **SQL and NoSQL schemas** optimized for performance, enabling analytics dashboards to scale to millions of daily transactions.
- Implemented **AWS-based data ingestion pipelines** for real-time financial and automotive datasets, using Kinesis and Lambda for scalable ETL workflows.
- Contributed to **automotive data catalog platforms**, integrating supplier systems into unified backend models for international markets.
- Reduced query complexity and improved maintainability by adopting **Neo4j graph data models** in internal knowledge management systems.
- Introduced **unit and integration testing frameworks** (JUnit, Mockito) to increase system reliability and reduce regression bugs in releases.
- Collaborated with DevOps team to containerize applications with Docker and orchestrate with Kubernetes for production deployments.
- Ensured compliance with GDPR and ISO data protection standards while designing secure data access layers.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Contributed to backend services in **Java and PHP**, supporting large-scale CMS and e-commerce platforms serving European automotive clients.
- Implemented **Neo4j proof-of-concept graph modules** for product catalog relationship mapping, laying foundation for future production adoption.
- Integrated RESTful APIs with AWS-hosted applications, ensuring seamless synchronization between distributed systems.
- Collaborated with cross-functional UI/UX teams to deliver customer-facing features on tight deadlines.
- Maintained high-performance relational database schemas, optimizing SQL queries for low latency in catalog search engines.
- Designed custom logging and monitoring tools to improve error detection and reduce downtime in client-facing applications.
- Applied Agile methodology to deliver sprint-based increments, ensuring timely delivery of client projects.
- Enhanced platform scalability by introducing caching mechanisms and distributed data storage approaches.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in the development of **Java and PHP backend services**, gaining experience in building modular applications for e-commerce platforms.
- Designed **SQL database schemas** and optimized queries under mentorship, improving response times for internal applications.
- Learned and applied **Neo4j concepts** in prototype systems for product recommendation engines.
- Supported integration of AWS S3 storage for file management workflows in production applications.
- Participated in Agile sprints, contributing to feature development, bug fixing, and peer code reviews.
- Automated testing for APIs with Postman and JUnit, ensuring reliability of services before release.
- Built reporting scripts to extract insights from MySQL and MongoDB data sources, supporting business decision making.
- Contributed to knowledge sharing and documentation, accelerating onboarding for future interns.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **AWS Certified Solutions Architect – Associate**

- ❖ **Neo4j Certified Professional**
 - ❖ **Oracle Certified Professional: Java SE Programmer**
 - ❖ **Google Cloud Professional Cloud Architect**
-

PROJECTS

- ✓ **Automotive Parts Catalogue Platform (AWS + Neo4j + Java):** Led backend engineering for a large-scale automotive parts catalogue integrating Neo4j graph databases and AWS microservices, enabling real-time supplier data queries across multiple international markets.
- ✓ **Graph-Based Personalization Engine:** Designed Neo4j-powered recommendation service for marketing automation, deployed in AWS with event-driven architecture, improving engagement metrics by 35%.
- ✓ **Cloud Migration for Enterprise Finance Client:** Migrated legacy monolithic apps into AWS microservices, leveraging Lambda, ECS, and RDS, achieving 50% cost reduction and improved scalability.
