

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Backend Engineer with 8+ years of experience designing and building robust backend systems using Java and Spring Boot, managing modern cloud infrastructure on AWS and GCP, and developing scalable internal tools and APIs. Proficient in RESTful API design, CI/CD, system integration, and Infrastructure as Code (IaC) using Terraform. Proven success leading internal platform development, domain/SSL lifecycle automation, and backend optimizations for high availability and performance. Strong communicator who thrives in cross-functional teams and fast-paced environments.

TECHNICAL SKILLS

- **Languages:** Java, JavaScript, TypeScript, HTML, CSS, SQL, Bash
- **Frameworks:** Spring Boot, Node.js, Express, React, Redux, Next.js
- **Cloud Platforms:** AWS (EC2, S3, CloudFront, Route53, CloudWatch), GCP (App Engine, Cloud Run)
- **Infrastructure & Tools:** Terraform, CloudFormation, Docker, Kubernetes, Jenkins, GitHub Actions
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis
- **Testing & Monitoring:** JUnit, Mockito, Cypress, Grafana, Prometheus, Sentry, CloudWatch
- **Other:** REST APIs, Microservices, CI/CD, TDD, Agile/Scrum, Domain & SSL Management

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and deployed scalable backend microservices in Java and Spring Boot to power internal product platforms, reducing runtime errors and increasing feature delivery speed by 30%.
- Engineered RESTful APIs to integrate third-party systems like Affise, UptimeRobot, and Slack, streamlining deep-link routing and campaign automation across domains.
- Led the infrastructure automation using Terraform and GitHub Actions, improving infrastructure reliability and reducing environment provisioning time by 60%.
- Developed and maintained batch-processing jobs and backend tooling for campaign and domain lifecycle automation, reducing manual overhead by 80%.
- Implemented full domain lifecycle automation including registration, DNS updates via Route53, and SSL/TLS provisioning using AWS Certificate Manager.

- Enhanced monitoring via CloudWatch and custom health checks with Slack alerting, ensuring 99.95% uptime and proactive fault detection across services.
- Built internal dashboards and admin tools using Java backend and React front-end to manage workspace accounts, campaign metrics, and link tracking.
- Spearheaded the adoption of AI-powered prompt workflows for domain naming suggestions and content recommendations via internal Slack bots.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed backend systems using Java and Spring Boot with PostgreSQL, focused on managing marketing campaign lifecycles and audience segmentation.
- Built APIs to integrate with marketing and analytics platforms like Google Analytics, Affise, and internal CRMs, enabling real-time campaign tracking.
- Automated domain and SSL operations using shell scripting and AWS CLI tools, ensuring secure setup for client-specific marketing microsites.
- Designed and deployed infrastructure for internal campaign automation tools using EC2, Lambda, and Terraform, increasing automation coverage to 90%.
- Collaborated with QA and product teams to implement test-driven development practices, reducing bugs in production by 35%.
- Created domain management service to automate domain purchases, DNS propagation (Cloudflare), and SSL certificate rotation.
- Integrated monitoring via CloudWatch Logs and SNS alerts, achieving sub-10-minute average incident response time.
- Mentored junior developers in backend architecture and DevOps practices, fostering team-wide knowledge sharing and code quality improvements.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed backend systems in Java and Node.js to support customer-facing insurance and property management applications.
- Built and maintained APIs for policy management, document storage, and user permissions, improving modularity and access control.
- Migrated legacy backend systems to containerized environments using Docker and orchestrated with Kubernetes on AWS.
- Refactored key modules to follow DDD principles and achieve higher test coverage, contributing to more stable releases.
- Led CI/CD integration using Jenkins and GitLab pipelines, automating deployments and improving release reliability by 40%.
- Integrated NoSQL solutions (MongoDB) for storing unstructured document metadata and user logs to improve performance.
- Worked with DevOps team to implement monitoring and log aggregation using Prometheus and Grafana dashboards.
- Supported GDPR compliance initiatives by implementing anonymization and consent tracking modules across APIs.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Contributed to the development of backend systems for an e-commerce automation suite using Java, Spring Boot, and MySQL.
- Designed order and inventory management services with scalable REST APIs, improving third-party integration capabilities.
- Assisted in deploying the platform on AWS EC2 and configuring VPC and Route53 for scalable DNS and traffic management.
- Supported transition from FTP-based sync to real-time API-based syncing, reducing latency and manual errors.
- Built unit and integration tests for critical services, improving stability and test coverage from 40% to 85%.
- Collaborated with front-end team to expose new API capabilities in customer dashboards.
- Performed infrastructure maintenance tasks including database backups and log management via shell scripts.
- Assisted in project planning and agile ceremonies, offering insights on backend timelines and risk assessments.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Designed backend modules in Java for educational data systems, focused on grading analytics and content delivery tools.
- Built reporting APIs to integrate learning progress data into dashboards consumed by React front-end apps.
- Participated in SSL/TLS rollout and implemented HTTPS support across internal tools for secure data transmission.
- Contributed to Docker-based dev environments, enabling consistency across local, staging, and prod setups.
- Learned and applied RESTful API design patterns, improving collaboration with mobile and front-end teams.
- Wrote documentation for internal services and developer setup guides to streamline onboarding for new interns.
- Provided support for bug triage and regression testing of backend APIs during major release cycles.
- Improved performance of data export services through query optimization and job scheduling.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
 - ❖ Oracle Certified Professional: Java SE 11 Developer
 - ❖ Terraform Associate Certification (HashiCorp)
 - ❖ Spring Professional Certification (VMware)
-

PROJECTS

- ✓ **Internal Workspace Dashboard & DMS System**
Led architecture and development of a domain management platform with full domain lifecycle automation (registration, DNS, SSL) on AWS using Java and Terraform. Integrated batch jobs and Slack alerting for fault recovery.
- ✓ **Campaign Automation Engine**
Built a backend system in Spring Boot for marketing campaign execution with deep-link routing (Affise), real-time tracking, and auto-domain provisioning using AWS SDKs and Cloudflare APIs.
- ✓ **Monitoring & Recovery Suite**
Designed and implemented an automated monitoring and recovery system using CloudWatch, custom shell scripts, Slack bots, and EC2 event hooks to maintain 99.95% system uptime.
