

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and results-driven Senior Software Engineer with 9+ years of experience designing, developing, and delivering high-performance SaaS platforms, enterprise applications, and microservices architectures. Expert in Java, Spring Boot, JPA, Hibernate, REST APIs, and event-driven solutions, with proven success in building scalable systems deployed on AWS and GCP. Adept at implementing CI/CD pipelines, Docker/Kubernetes container orchestration, and database design for SQL (PostgreSQL, MySQL) and NoSQL (MongoDB, Redis). Collaborative leader with a passion for clean architecture, agile development, and delivering business value through technology innovation.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java (JDK 8–21), Spring Boot, Spring MVC, Hibernate, JPA, REST, GraphQL, Node.js, JavaScript, TypeScript
- **Cloud Platforms:** AWS (EC2, S3, RDS, Lambda, API Gateway, CloudFormation), GCP (Compute Engine, Cloud SQL, Firestore, Pub/Sub)
- **Databases:** PostgreSQL, MySQL, Oracle, MongoDB, Redis
- **DevOps & Tools:** Docker, Kubernetes, Jenkins, Git, GitHub, GitLab CI/CD, Maven, Gradle, SonarQube
- **Architectures:** Microservices, Event-Driven Architecture, Domain-Driven Design, SaaS multi-tenancy
- **Other:** NoSQL data modeling, API Security (OAuth2, JWT), Agile/Scrum, Test-Driven Development (JUnit, Mockito)

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led the design and development of a multi-tenant SaaS platform using Java 17, Spring Boot microservices, and PostgreSQL, ensuring scalability to support over 500 concurrent enterprise clients without performance degradation.
- Architected and deployed containerized services on AWS EKS with automated scaling policies, reducing infrastructure costs by 20% while improving service availability to 99.99%.
- Developed complex REST APIs with advanced query optimizations, caching strategies, and security layers using OAuth2/JWT to handle millions of monthly API calls securely.

- Implemented CI/CD pipelines in GitLab integrating automated tests, security scans, and zero-downtime deployments, reducing release cycles from bi-weekly to daily.
- Optimized Hibernate/JPA entity relationships and indexes for PostgreSQL and MongoDB, achieving up to 40% faster query execution in critical modules.
- Mentored junior developers on clean code, SOLID principles, and microservices best practices, resulting in measurable improvements in code quality metrics.
- Led migration of core services from monolithic architecture to event-driven microservices using Apache Kafka, enabling asynchronous processing and reducing API response times by 35%.
- Integrated GCP Pub/Sub for cross-service messaging in hybrid cloud deployment, ensuring high availability and disaster recovery compliance.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed enterprise-level Java Spring Boot applications with REST APIs, enabling seamless integration with third-party CRM and payment gateway services.
- Deployed applications on AWS EC2 and Docker containers, automating infrastructure provisioning with CloudFormation templates for faster onboarding of new environments.
- Designed and implemented role-based authentication and authorization systems using Spring Security and JWT, meeting GDPR compliance requirements.
- Enhanced SQL and NoSQL database schemas, introducing optimized indexes and query structures that reduced average data retrieval time by 30%.
- Integrated real-time analytics dashboards with PostgreSQL and Redis caching for high-speed metric updates, improving stakeholder decision-making capabilities.
- Collaborated with cross-functional teams in Agile sprints, providing technical input to refine business requirements into deliverable features.
- Conducted API load testing and performance tuning to sustain peak traffic during seasonal campaigns without service interruptions.
- Introduced automated integration testing pipelines with JUnit and Mockito, increasing test coverage from 45% to 85% within six months.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built and maintained custom enterprise solutions in Java and Spring Boot for clients across finance and logistics sectors.
- Managed PostgreSQL, MySQL, and MongoDB instances, ensuring optimal performance through regular query optimization and schema refinement.
- Implemented Docker-based development environments and orchestrated deployments with Kubernetes, reducing manual setup time for developers by 60%.
- Developed RESTful microservices for data synchronization between internal ERP systems and third-party APIs, achieving near real-time updates.
- Designed caching layers using Redis to reduce redundant database calls, cutting average response time for critical endpoints by 50%.
- Created and maintained technical documentation and API specifications to improve onboarding efficiency for new developers.
- Collaborated with QA teams to implement automated regression testing suites, significantly lowering post-deployment defect rates.
- Integrated AWS S3 for secure file storage and retrieval, implementing lifecycle policies to optimize storage costs.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Developed backend services in Java and Spring MVC for e-commerce platforms with payment integration and order management modules.
- Designed efficient SQL queries and indexes for MySQL to enhance search functionality and transaction processing speed.
- Participated in Agile ceremonies, providing input to sprint planning and backlog refinement to align deliverables with client goals.
- Integrated AWS CloudFront CDN to improve content delivery times for global customers.
- Implemented REST APIs for mobile applications, ensuring compatibility with Android and iOS clients.
- Used GitHub flow for collaborative development, ensuring smooth integration of features into the main release branch.
- Optimized application performance through memory profiling and JVM tuning, reducing server load under peak usage.
- Provided post-deployment support and bug fixes, achieving 95% SLA compliance for resolution timeframes.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in developing web applications using Java, JSP, and Servlets for small business clients.
- Created basic REST endpoints for internal tools, supporting faster data retrieval for business reporting.
- Wrote SQL queries and basic stored procedures to automate reporting tasks.
- Participated in code reviews and applied feedback to improve adherence to coding standards.
- Developed front-end interfaces using HTML5, CSS3, and JavaScript for internal admin dashboards.
- Deployed test environments using AWS EC2 instances to simulate production workloads.
- Researched emerging Java frameworks and libraries to propose modernization of legacy systems.
- Provided documentation and training for junior interns on software development best practices.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Solutions Architect – Associate
- ❖ Google Cloud Professional Cloud Architect
- ❖ Oracle Certified Professional, Java SE 11 Developer

PROJECTS

- ❖ **Multi-Tenant SaaS Platform** – Architected and developed a cloud-native SaaS platform using Java 17, Spring Boot microservices, PostgreSQL, MongoDB, Docker, and Kubernetes on AWS EKS. Designed API gateway and service mesh for secure inter-service communication.
- ❖ **E-Commerce Order Management System** – Built backend order tracking, payment, and inventory modules in Spring Boot with PostgreSQL and Redis caching, deployed on GCP for global scalability.
- ❖ **Real-Time Analytics Dashboard** – Created live analytics visualization using Java APIs, WebSockets, PostgreSQL, and Redis for sub-second update times.
