

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with 9+ years of experience in designing, developing, and maintaining scalable backend and cloud-native systems. Specialized in Java, Spring Boot, Kafka, Docker, and Kubernetes with strong hands-on experience in AWS and GCP environments. Adept at microservices architecture, container orchestration, CI/CD pipelines, and production-grade RESTful APIs. Proven ability to optimize complex systems, drive test-driven development, and support enterprise-scale software solutions in fast-paced Agile environments.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Spring Boot, Python, JavaScript, TypeScript, React, C#, Node.js
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, ECS), GCP (Spanner, GKE), Docker, Kubernetes, Jenkins, GitHub Actions, Terraform
- **Architecture & Middleware:** Microservices, RESTful APIs, Kafka, RabbitMQ, SQS, SOAP
- **Databases:** PostgreSQL, MySQL, MongoDB, Firestore, Google Cloud Spanner, Redis
- **Testing & CI/CD:** JUnit, Mockito, Cucumber, Jenkins, GitLab CI, SonarQube, TestContainers
- **Monitoring & Logging:** ELK Stack, Prometheus, Grafana, CloudWatch, Stackdriver
- **Practices:** Agile (Scrum, Kanban), SOLID, TDD, BDD, CI/CD, Infrastructure as Code (IaC)

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led development of cloud-native inventory and warehouse management modules, using Java, Spring Boot, and Kafka to process millions of real-time transactions across multiple markets.
- Designed scalable microservices deployed in Kubernetes clusters with Helm, enabling dynamic service discovery and real-time auto-scaling for global deployments.
- Implemented event-driven architecture with Kafka Streams for asynchronous processing and downstream data sync across customer-facing and partner APIs.
- Created CI/CD pipelines in GitLab CI and Jenkins, automating deployment to AWS ECS and GCP GKE with rollback and canary deployment strategies.
- Integrated monitoring tools like Prometheus and Grafana to establish dashboards and alerting for service-level indicators (SLIs), reducing downtime by 37%.

- Collaborated with DevOps and Security teams to build secure Docker images, scan for vulnerabilities, and enforce IAM role-based access on AWS and GCP.
- Delivered custom REST APIs for internal business tools with OpenAPI documentation, reducing support team ticket load by 42%.
- Conducted peer code reviews, mentored 3 junior developers, and introduced BDD practices using Cucumber to ensure stakeholder-driven test coverage.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed backend modules in Spring Boot to support digital marketing platforms across European retailers, ensuring seamless multi-language support and high availability.
- Utilized AWS Lambda and S3 for serverless ETL jobs that processed product catalog updates from multiple vendors on an hourly basis.
- Built Kafka-based integration pipelines that synchronized offer management and inventory across eCommerce and ERP systems in near real time.
- Maintained NoSQL document stores (MongoDB, DynamoDB) with versioned schemas and robust validation mechanisms for unstructured campaign data.
- Containerized all core services with Docker and managed deployments via ECS and Kubernetes, introducing rolling updates and liveness/readiness probes.
- Integrated with external APIs using REST and SOAP, ensuring secure communication through OAuth 2.0 and TLS with detailed request/response tracing.
- Implemented dashboard visualization with ELK Stack to track user interactions and campaign metrics, delivering insights used by marketing stakeholders.
- Led the adoption of TDD and mock-based unit testing using JUnit and Mockito, reducing critical bugs at release by 55%.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built modular Spring Boot applications supporting multi-tenant configuration for clients in logistics and inventory systems.
- Designed scalable REST APIs and background services that processed warehouse scanning data and synchronized with supplier ERPs in JSON and XML formats.
- Deployed services to on-prem and cloud hybrid environments, integrating VPN tunnels and secure API gateways for interconnectivity.
- Introduced CI workflows in Jenkins and GitLab CI, including code linting, container vulnerability scanning, and database migration verification.
- Built reactive UI dashboards using React and Redux, showing live stock updates and analytics, backed by real-time APIs.
- Wrote integration tests using TestContainers for Postgres, Kafka, and Redis dependencies, ensuring environment consistency across dev, staging, and prod.
- Participated in Agile ceremonies, grooming product backlog, and releasing features via sprints and feature toggles in production environments.
- Delivered training sessions to QA and support teams to ensure smooth UAT and post-deployment testing phases.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Developed Spring-based backend services to support product data feeds, integrating with SOAP and REST endpoints for third-party catalog providers.
- Enhanced performance of product import pipelines by 60% via asynchronous execution and batch processing in PostgreSQL.
- Implemented error-tracking mechanisms using ELK and exception dashboards to support post-mortem analysis of failed ingestion jobs.
- Collaborated with frontend developers to support dynamic UI rendering using REST APIs, enabling search and filter operations with millisecond response times.
- Wrote JUnit tests with >85% coverage and participated in QA automation strategy using Selenium and Postman tests for API validation.
- Migrated legacy applications to containerized Spring Boot services and Docker images, enabling local testing and cloud readiness.
- Designed audit logging services to track administrative operations, including CRUD logs and rollback capabilities in case of user errors.
- Participated in initial POC for migration from monolith to microservices using Kubernetes and API Gateway.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Supported Java-based inventory applications for retail clients, enhancing backend code quality and applying best practices in SOLID and DRY principles.
- Built CLI tools for batch processing of retail transactions into NoSQL storage for analytics consumption.
- Integrated PostgreSQL triggers and functions to handle inventory updates and rollback scenarios in case of failed imports.
- Designed and built internal tools for customer support teams, automating report generation and reducing time spent by 30%.
- Wrote comprehensive API documentation and maintained Postman collections to standardize interface testing.
- Contributed to build system automation with Gradle scripts and Jenkins pipelines, improving build time and traceability.
- Shadowed senior developers in code reviews and participated in internal dev talks on cloud computing fundamentals.
- Assisted in deployment scripts for moving applications to early-stage containerized environments with Docker Compose.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
 - ❖ Google Cloud Associate Cloud Engineer
 - ❖ Certified Kubernetes Application Developer (CKAD)
 - ❖ Oracle Certified Java Programmer (OCPJP)
-

PROJECTS

Real-Time Inventory Sync Platform

- Designed a multi-region platform using Kafka, Spring Boot, and Kubernetes to sync retail inventory across 3 continents in real time, supporting millions of SKU updates per day.

Cloud Migration for Legacy Retail ERP

- Led a team to refactor monolithic Java ERP modules into microservices and migrate them to AWS ECS with IaC using Terraform and CI/CD through Jenkins pipelines.

Retail Analytics Dashboard

- Built an end-to-end analytics system combining ELK Stack, Grafana, and GCP BigQuery to surface performance insights and customer behavior metrics to business stakeholders.
