

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Java Developer with a strong background in building secure, scalable backend systems using Spring Boot, REST APIs, OAuth2, and containerized microservices. Over 10 years of experience across enterprise environments, with hands-on expertise in CI/CD, relational and NoSQL databases, messaging platforms, and Agile delivery. Focused on writing high-quality, maintainable code aligned with SOLID principles and domain-driven practices for mission-critical applications.

TECHNICAL SKILLS

- **Languages:** Java 11+, SQL, Bash, JavaScript, TypeScript
- **Backend Frameworks:** Spring Boot, Spring MVC, Spring Security, Spring Data, Spring Integration
- **APIs & Integration:** REST, SOAP, gRPC, OAuth2, JWT, OpenAPI, Postman
- **Messaging:** ActiveMQ, RabbitMQ, Kafka, event queues, retry orchestration
- **Databases:** PostgreSQL, Microsoft SQL Server, Elasticsearch, Redis, Neo4j
- **Frontend:** Vue.js, Angular, JSP, jQuery
- **DevOps & Cloud:** Docker, Kubernetes, Helm, Azure DevOps, GitHub Actions, Jenkins
- **Testing:** JUnit, Mockito, REST Assured, TestContainers, integration testing
- **Observability:** ELK Stack, OpenTelemetry, Prometheus, Grafana
- **Development Tools:** IntelliJ IDEA, Eclipse, Maven, Gradle, Git, Jira
- **Practices:** Agile, Scrum, TDD, CI/CD pipelines, DDD, SOLID principles

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led the development of high-throughput backend services with Spring Boot and Java 17, integrating ActiveMQ messaging queues for asynchronous event dispatching.
- Secured REST APIs with OAuth2 and JWT-based access controls, introducing token introspection and refresh flow to meet audit and compliance requirements.
- Integrated CI/CD pipelines using GitHub Actions with Maven-based builds, deploying Dockerized services into Azure Kubernetes Service using environment-specific Helm values.
- Architected microservices with domain-driven modules and clear API boundaries, simplifying refactor cycles and improving code readability and extensibility.
- Worked with OpenTelemetry and Prometheus exporters to add real-time metrics into critical paths, enhancing observability and enabling SLA-based monitoring.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Built backend components to process high-frequency transaction events, optimizing Spring Data JPA queries for batch inserts and consistency validation.
- Implemented Elasticsearch integrations with Spring Boot to index financial records, supporting near real-time analytics and advanced filtering logic in the UI.
- Refactored SOAP interfaces into RESTful endpoints with annotated Spring MVC controllers, improving external system interoperability and reducing latency.
- Developed layered access roles across user tiers using Spring Security filters and metadata tags, enabling granular permissions for client portal usage.
- Participated in daily Scrum routines and biweekly planning meetings, contributing technical feasibility insights during backlog refinement and sprint estimations.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Redesigned monolithic HR/payroll application into modular services with Spring Boot, increasing deployment reliability and enabling horizontal scaling.
- Built complex data reconciliation job flows using Quartz and Spring Batch, generating summary reports that reduced monthly financial discrepancies by 45%.
- Introduced Flyway-based schema migrations across environments, standardizing SQL upgrade paths and avoiding ad-hoc script issues during production rollouts.
- Improved test coverage across controllers, services, and repositories using JUnit and TestContainers for reproducible integration test environments.
- Worked closely with DevOps team to containerize legacy WAR applications for Docker-based deployments and monitored runtime via custom health probes.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Assisted with transforming server-side JSP templates into RESTful Spring Boot services, enabling faster page delivery and reduced backend load.
- Collaborated on a logging pipeline implementation using Logstash and Filebeat, exporting structured logs to Elasticsearch for querying in Kibana dashboards.
- Used Maven multi-module structure to split business logic, API models, and utilities across reusable libraries, supporting better dependency management.
- Contributed to custom health check implementations for microservices deployed to Kubernetes, using liveness and readiness probes tied to external system states.
- Reviewed backend exception traces during staging QA cycles and added defensive logic, improving runtime stability and reducing support incidents.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Supported internal tooling updates written in Java and Spring MVC, focusing on admin interface enhancements for faster report generation and user audit views.
- Wrote DAO layer enhancements using Hibernate Criteria API, improving data filtering capabilities for CRM exports and increasing client usability.
- Configured Maven profiles to separate staging/test/prod environments, simplifying deployment preparation and reducing manual configuration overhead.

- Learned and applied Java exception handling best practices, contributing improvements to error responses in REST API error mapping strategies.
 - Documented controller-service-repository interactions across modules, helping junior devs and QA trace data transformations during their onboarding period.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Oracle Certified Professional: Java SE 11 Developer (2024)
 - ❖ Spring Framework Certification – VMware Learning (2023)
 - ❖ CI/CD & Cloud-Native Java – Udemy Pro (2023)
 - ❖ Kubernetes Developer – CNCF (2022)
 - ❖ Secure Software Engineering in Java – OWASP DevSecCon (2021)
-

PROJECTS

- ✓ OAuth2 Access Management Layer: Designed and deployed a Spring Boot application managing token validation, scopes, and role enforcement for a multi-tier backend API architecture.
- ✓ CI/CD Compliance System: Automated the entire deployment lifecycle of microservices with Maven, Docker, GitHub Actions, and Helm, reducing human error and standardizing environments.
- ✓ Messaging Error Handler: Built a retry queue listener with dead-letter handling in ActiveMQ, increasing message delivery reliability and reducing manual clean-up workloads.
- ✓ Elasticsearch Reindex Tool: Created a batch index migration utility to safely transition multi-tenant logs to a new schema version, supporting zero-downtime API compatibility.
- ✓ API Sandbox Simulator: Developed a REST and gRPC simulator service used for QA regression testing of dependent applications, cutting test prep time and increasing coverage.
