

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced and self-driven Senior Fullstack Engineer with over 9 years of hands-on experience building and optimizing scalable, high-performance web applications and APIs. Proven expertise in JavaScript/TypeScript, Angular, Node.js, and GraphQL with deep knowledge of Docker, MongoDB, MySQL, and Kubernetes in remote-first, Agile environments. Strong in system design, automated testing, and leading greenfield initiatives. Committed to continuous learning and engineering excellence with a growth mindset and readiness for tech leadership roles.

TECHNICAL SKILLS

- **Frontend:** Angular, TypeScript, JavaScript (ES6+), HTML5, SCSS, RxJS, Cypress, Karma
- **Backend:** Node.js, NestJS, Express.js, REST APIs, GraphQL, WebSockets
- **Database:** MySQL, MariaDB, MongoDB, PostgreSQL
- **DevOps:** Docker, Kubernetes, Git, GitHub Actions, CI/CD, Terraform
- **Cloud:** AWS (EC2, S3, Lambda), GCP, Firebase
- **Tools:** Jira, Bitbucket, GitLab, Figma, Postman, Swagger
- **Testing:** Jest, Cypress, Mocha, Chai, Unit & E2E Testing
- **Methodologies:** Agile/Scrum, TDD, DDD, SOLID, Clean Architecture

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Built scalable fullstack features using Angular and Node.js that reduced customer churn by 20% by enabling personalized call handling workflows.
- Developed and optimized REST and GraphQL APIs that served over 5 million monthly requests, ensuring consistent performance with less than 200ms response time.
- Led architectural refactoring of legacy backend services into a modular microservice ecosystem using Docker, improving deployment speed by 3x.
- Integrated MongoDB and MySQL in data-rich modules with a custom data sync engine that supported real-time insights for distributed customer service teams.
- Delivered a greenfield chat and messaging system using WebSockets and event-driven design patterns to unify voice and message threads.

- Implemented CI/CD pipelines with GitHub Actions and Docker containers, reducing QA cycle time by 45% and increasing release frequency.
- Introduced automated unit and E2E testing via Cypress and Jest, raising code coverage to 90% and cutting down regression bugs in production.
- Collaborated daily with designers and product managers in a fully remote Agile squad, acting as de facto tech lead for 3 key product verticals.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Designed and implemented dynamic dashboards with Angular and TypeScript, significantly improving client KPIs visibility and executive decision-making.
- Created a GraphQL middleware layer for aggregating data across 5 legacy services, reducing frontend complexity and boosting performance.
- Built backend services in Node.js with support for multilingual features and real-time updates, enabling global expansion for enterprise clients.
- Migrated services from monolith to containerized microservices with Docker and Kubernetes, improving scalability under load by 60%.
- Wrote detailed technical documentation and diagrams for internal systems and APIs, increasing onboarding speed for new engineers by 50%.
- Championed the adoption of E2E and integration tests using Cypress and Postman, contributing to a 30% drop in QA defects.
- Actively participated in sprint planning, retrospectives, and daily standups, ensuring timely delivery across all sprint goals.
- Provided mentoring to junior developers through regular code reviews and 1:1 pairing sessions, fostering a stronger engineering culture.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed rich interactive web interfaces using Angular and RxJS that supported thousands of concurrent users without UI performance degradation.
- Built a flexible form engine in Node.js and Express that powered configurable workflows across multiple departments.
- Integrated MariaDB and MongoDB in backend workflows to manage both structured business logic and semi-structured analytics.
- Contributed to Kubernetes orchestration and cluster setup, reducing manual DevOps work and supporting zero-downtime deployments.
- Implemented logging, alerting, and tracing via Prometheus and Grafana, improving visibility into production failures.
- Worked closely with QA to define testing strategies, achieving nearly full automation for regression scenarios.
- Rewrote critical backend flows with performance-first focus, reducing API response time by 70% under peak loads.
- Participated in code reviews and RFCs, constantly improving code quality and knowledge sharing among the dev team.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Developed and launched internal CRM components using AngularJS and RESTful services, improving support operations tracking.
- Created responsive frontend modules that integrated with backend APIs to serve B2B analytics dashboards.
- Refactored several core components to comply with accessibility and performance standards, enhancing inclusivity.
- Implemented MySQL database models and wrote optimized queries for dashboard generation and audit reports.
- Contributed to a design system that standardized UI components across internal tools.
- Participated in a company-wide transition to Git-based workflows, helping enforce consistent branching strategies.
- Delivered technical demos to stakeholders, ensuring feedback loops on early prototypes and aligning product vision.
- Supported product rollout with end-user documentation and on-site training sessions for non-technical users.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Supported the development of a customer management system using Angular and Node.js, gaining early fullstack experience.
- Assisted in converting SQL database schema to a hybrid MongoDB architecture to improve search and filtering capabilities.
- Created testing suites for frontend components using Karma and Jasmine, learning the importance of test-first development.
- Deployed staging builds using Docker and helped write scripts for CI automation.
- Worked under senior mentorship to debug and optimize slow API endpoints, improving system responsiveness.
- Helped create technical documentation and user guides for internal business tools.
- Participated in daily standups and sprint planning, understanding Agile practices and delivery expectations.
- Built prototypes for mobile-responsive layouts and collaborated with designers on UI/UX adjustments.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Advanced Node.js Microservices – Udemy (2024)
 - ❖ Fullstack TypeScript Developer – CodeCademy (2023)
 - ❖ Docker & Kubernetes: The Complete Guide – Udemy (2023)
 - ❖ Testing Angular Applications – Pluralsight (2022)
 - ❖ GraphQL with Node.js & Apollo – Coursera (2022)
-

PROJECTS

- ✓ **SmartCall CRM Engine**
Led development of an AI-assisted CRM backend for customer-facing teams, combining Node.js, MongoDB, and GraphQL with Dockerized services. Included dynamic form builder, permission-based access, and activity tracking modules.
- ✓ **Realtime Dashboard Suite**
Created Angular dashboards with live metrics and alerts powered by WebSockets and GraphQL subscriptions. Used Kubernetes to ensure autoscaling during heavy traffic peaks.
- ✓ **Conversational Bot Gateway**
Implemented a plug-and-play service for integrating chatbots into client communication workflows. Built with NestJS and deployed on AWS with Terraform.
