

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Full Stack Developer with 8+ years of experience designing, building, and optimizing scalable applications across the public and private sectors. Expert in **Java, Kotlin, Angular, PostgreSQL, and REST API design**, with strong exposure to event-driven systems using Kafka. Skilled at collaborating in **Agile environments** and delivering robust, secure, and maintainable solutions. Proven ability to integrate cloud platforms (**AWS, GCP**) and databases (**SQL & NoSQL**) to achieve performance and scalability objectives. Adept at aligning technical innovation with business goals to deliver meaningful impact.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Kotlin, Angular, TypeScript, JavaScript, Node.js, Spring Boot, .NET Core, PHP
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Cassandra, DynamoDB
- **Cloud Platforms:** AWS, GCP, Azure
- **DevOps & Tools:** Docker, Kubernetes, GitLab CI/CD, Terraform, CloudFormation, Jira, Confluence
- **Architectures:** REST APIs, Event-Driven (Kafka), Microservices, SaaS, Cloud-Native Applications
- **Practices:** Agile/Scrum, TDD, Code Reviews, Secure Coding, CI/CD Automation

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led full-stack development of scalable SaaS applications, implementing backend services in **Java/Kotlin with Spring Boot** and front-end solutions in **Angular**, ensuring cross-platform reliability and security.
- Designed and optimized **REST APIs** used by thousands of daily active users, integrating authentication, authorization, and data caching for performance gains exceeding 40%.
- Spearheaded adoption of **PostgreSQL and Redis** for critical modules, ensuring high availability, query optimization, and secure transaction handling in compliance with GDPR.
- Collaborated with distributed Agile teams using **Jira, GitLab, and Confluence**, driving sprint planning, backlog grooming, and delivering consistently ahead of deadlines.
- Introduced **Kafka-based event-streaming architecture** for asynchronous communication, improving system resilience and real-time data synchronization across services.

- Implemented **containerization with Docker and Kubernetes** on AWS, enabling fault tolerance, auto-scaling, and reducing deployment time from hours to minutes.
- Championed code quality by introducing **comprehensive unit and integration testing**, raising overall test coverage above 85% and reducing post-release incidents.
- Mentored junior developers in **clean code principles, Git workflows, and Agile best practices**, fostering a knowledge-sharing culture and accelerating onboarding.

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Built and maintained digital marketing platforms with **Angular front-end** and **Java backend services**, handling high-throughput data pipelines supporting major advertising campaigns.
- Developed and optimized **RESTful APIs** for analytics modules, enabling real-time campaign monitoring and reporting with sub-second latency.
- Managed **PostgreSQL and MongoDB** schemas, implementing indexing, replication, and backups to guarantee data integrity and query performance at scale.
- Collaborated with cross-functional teams to integrate **third-party APIs and payment systems**, ensuring seamless user experience and compliance with security standards.
- Automated CI/CD pipelines in **GitLab**, enabling rapid deployments and reducing manual overhead, achieving 90% faster release cycles.
- Worked closely with UI/UX designers to enhance **Angular-based dashboards**, applying responsive design principles and accessibility standards for broader adoption.
- Conducted **code reviews and documentation sessions**, ensuring long-term maintainability and smooth handover across teams and clients.
- Participated in Agile ceremonies, including sprint reviews and retrospectives, actively contributing to continuous improvement initiatives.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed enterprise applications using **Java, Spring, and Angular**, delivering scalable solutions for clients in finance, healthcare, and retail sectors.
- Designed and implemented **relational database schemas in PostgreSQL and MySQL**, ensuring robust data modeling, query optimization, and secure role-based access control.
- Enhanced legacy systems by modernizing monolithic architectures into **microservices**, improving modularity, scalability, and deployment agility.
- Created **interactive Angular components** for real-time dashboards, integrating REST APIs to provide instant reporting and operational insights.
- Managed **cloud deployments in AWS**, utilizing S3, EC2, and RDS services, while applying Terraform for infrastructure-as-code to maintain consistent environments.
- Improved system resilience by integrating **caching and message queues**, reducing latency and handling peak loads without downtime.
- Collaborated with QA engineers to implement **automated test suites**, reducing regression defects by over 50% across multiple product lines.
- Contributed to customer workshops and requirement-gathering sessions, translating business needs into clear technical deliverables.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Delivered full-stack development for client-facing portals, using **Java backend services and Angular front-end** for high-performance e-commerce solutions.
- Designed and deployed **REST APIs** integrated with payment gateways and shipping providers, ensuring secure financial transactions.
- Implemented **PostgreSQL queries and stored procedures**, optimizing reporting modules and ensuring compliance with business rules.
- Enhanced UI components with Angular, focusing on **responsive design and cross-browser compatibility**, leading to higher customer engagement rates.
- Applied Agile methodologies with Jira for project tracking, actively participating in sprint planning, reviews, and demos.
- Deployed applications in **Docker containers**, enabling consistent development-to-production environments.
- Conducted peer code reviews to ensure quality and adherence to coding standards, reducing defects significantly.
- Collaborated closely with clients and designers to ensure solutions aligned with brand and functional requirements.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in developing **full-stack applications** with Java and Angular, contributing to modules involving user authentication and dashboards.
- Supported integration of **PostgreSQL databases** with front-end reporting tools, ensuring accurate visualization of financial and operational data.
- Learned and applied Agile practices, actively engaging in daily stand-ups and retrospective discussions for team improvement.
- Designed test cases and assisted QA engineers in executing **manual and automated testing**, ensuring application stability.
- Explored **NoSQL technologies** such as MongoDB for prototypes requiring flexible data models and rapid iteration.
- Documented workflows and technical specifications for knowledge sharing and future maintenance.
- Participated in bug triage and debugging sessions, gaining exposure to production-level issue resolution.
- Contributed to front-end development of Angular components, improving usability and performance for end-users.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- Oracle Certified Professional: Java SE
 - AWS Certified Solutions Architect – Associate
 - Google Cloud Professional Developer
 - Scrum Master Certified (SMC)
-

PROJECTS

- **Public Sector Portal Modernization:** Designed and implemented secure, scalable public-facing portals using **Angular, Java, and PostgreSQL**, integrated with cloud-native deployments in **AWS and GCP**.
- **Real-Time Analytics Dashboard:** Built **REST APIs** and **Angular dashboards** for government agencies to monitor data in real time, using **Kafka** for event-streaming and PostgreSQL for persistence.
- **Microservices Migration Project:** Transformed legacy monolithic applications into microservices deployed on **Docker and Kubernetes**, ensuring modularity, resilience, and CI/CD efficiency.
