

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 9+ years of experience architecting and implementing scalable backend and ML-integrated systems. Adept in Kotlin, Python, and machine learning, with a strong background in developing data-intensive applications and AI-powered tools. Proven track record in high-volume environments and cross-functional collaboration. Passionate about shaping early-stage AI initiatives and building production-grade ML pipelines.

TECHNICAL SKILLS

- **Languages:** Kotlin, Python, JavaScript, TypeScript, PHP
- **Frameworks:** FastAPI, Flask, Django, Spring Boot, NestJS, Vue.js, React
- **ML & AI:** Scikit-learn, TensorFlow, OpenCV, LangChain, HuggingFace Transformers, LLMs, Pandas, NumPy
- **DevOps & Tools:** Docker, Kubernetes, GitHub Actions, Jenkins, GCP, REST APIs, PostgreSQL, MySQL, Elasticsearch
- **Others:** ML pipeline design, Data preprocessing, Feature engineering, Unit & integration testing

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Developed and deployed scalable AI-powered matching engines in Kotlin and Python that automated classification of 1M+ product records with 94% accuracy.
- Collaborated with ML engineers to build and iterate over data pipelines for high-throughput product recognition workflows, reducing inference latency by 38%.
- Designed a modular FastAPI-based microservice architecture for ML inference APIs, supporting zero-downtime updates and multi-model routing.
- Built reusable data ingestion and feature transformation layers using Pandas and Dask, streamlining training workflows and improving training throughput.
- Integrated HuggingFace models for semantic search and product similarity scoring, increasing product match quality by over 20% in benchmark evaluations.
- Participated in roadmap planning and sprint grooming for internal AI tools, contributing to over 20 planning sessions and 50+ PR code reviews.
- Authored CI/CD workflows with Docker and GitHub Actions for continuous delivery of model and data services to Kubernetes clusters.
- Mentored junior engineers on best practices in Kotlin development and ML system integration, facilitating knowledge sharing and peer reviews.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Engineered backend services in Python for campaign automation and AI-based user behavior analytics using Scikit-learn and PyTorch.
- Created customer segmentation models that increased campaign efficiency by 26%, using unsupervised ML techniques like k-means and hierarchical clustering.
- Implemented product data normalization scripts in Kotlin, processing over 500k items daily with robust logging and error handling strategies.
- Built APIs for integration with real-time dashboards, ensuring low-latency data access through async services in FastAPI and PostgreSQL optimization.
- Designed schema for time-series interaction logs and trained anomaly detection models to identify bot behavior in live marketing campaigns.
- Automated testing pipelines with pytest and data validation utilities for model output verification across multiple environments.
- Refactored legacy Python codebase into modular architecture with dependency injection and service abstraction patterns.
- Led weekly technical knowledge sharing sessions, contributing significantly to upskilling and team alignment on ML integration.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Developed Kotlin-based service backends for custom CRM systems used in logistics and supply chain analysis.
- Designed Python-based predictive analytics models for route optimization and delay prediction, reducing SLA breaches by 31%.
- Managed data ETL pipelines that processed logs from GPS systems and integrated them with real-time event processing engines.
- Utilized OpenCV and Tesseract OCR to implement document scanning automation used in warehouse management.
- Supported development of mobile-compatible dashboards using React and integrated them with backend RESTful services.
- Configured Elasticsearch for large-scale query performance in vehicle location history analysis systems.
- Ensured high test coverage (90%+) via robust unit and integration test suites for all ML and backend services.
- Conducted performance audits and profiled memory usage of long-running services using Py-Spy and async tracing tools.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Created backend APIs in Flask and Python to serve dynamic content and analytics for e-commerce platforms.
- Worked on early prototype of ML-based pricing recommender tool based on historical demand and competitor tracking.

- Integrated API gateways with dynamic routing and A/B testing support using Nginx and traffic tagging strategies.
- Designed modular dashboard frontend using Vue.js for internal business intelligence tool.
- Participated in biweekly sprint demos showcasing backend optimization features and ML model enhancements.
- Contributed to dataset creation scripts using BeautifulSoup and Selenium for e-commerce product crawling.
- Applied basic NLP models to categorize user reviews and extract common themes for merchant dashboards.
- Implemented authentication and access control for admin modules using JWT and OAuth2.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Developed data parsing and transformation tools in Python for digital signage systems.
- Supported backend logging utilities for fault detection and performance metrics on embedded Linux systems.
- Assisted in writing Python scripts for log aggregation and anomaly detection based on simple statistical thresholds.
- Designed simple REST API in Flask to serve asset content for display devices in retail stores.
- Created basic machine learning prototypes for screen placement optimization using historical foot traffic data.
- Generated visual reports using Matplotlib and Seaborn for field engineer troubleshooting.
- Participated in daily standups and collaborated with cross-site team via Git and Redmine.
- Documented code and assisted senior developers with Kotlin-based scheduling service enhancements.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ DeepLearning.AI TensorFlow Developer Certificate
- ❖ MLOps Specialization (Coursera - Andrew Ng, 2024)
- ❖ Advanced Python for Data Science (edX, 2023)
- ❖ Kotlin for Backend Development (JetBrains Academy, 2023)

PROJECTS

✓ ProductMatchAI

- Built an ML-powered tool for automated product title matching using Siamese networks with TensorFlow, trained on 500K+ examples.

- Deployed RESTful API using FastAPI and Docker, supporting real-time product catalog enrichment.

✓ **AI-Powered Review Insight**

- Created a Python NLP system that extracts common themes from user reviews using TF-IDF and Named Entity Recognition.
- Integrated system into a dashboard for e-commerce clients to visualize review trends and feedback metrics.

✓ **SmartVisionDocs**

- Developed OCR document processing tool using OpenCV and Tesseract to digitize scanned logistics paperwork.
- Optimized for speed and accuracy with post-processing filters and classification models for document type detection.
