

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-866410383/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Senior Backend Engineer with 9+ years of experience building distributed backend systems, cloud-native infrastructures, and DevOps pipelines across HealthTech, FinTech, and SaaS domains. Strong expertise in **Kotlin, Java, Python, Go, Node.js**, and proven delivery of **microservices, event-driven architectures, and CI/CD pipelines** using **AWS, GCP, Docker, Kubernetes, SQL, and NoSQL**. Adept at enabling **scalability, reliability, and observability** with monitoring stacks such as **Prometheus, Grafana, and ELK**.

TECHNICAL SKILLS

- **Languages & Frameworks:** Kotlin, Java, Go, Python, Node.js, Spring Boot, Express.js
- **Cloud & DevOps:** AWS (EC2, ECS, Lambda, RDS, S3), GCP (GKE, BigQuery, Pub/Sub), Docker, Kubernetes, Terraform, Helm, Jenkins, GitHub Actions
- **Databases:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis, Cassandra
- **Monitoring & Logging:** Prometheus, Grafana, ELK Stack, Datadog
- **Other:** Microservices, REST, GraphQL, Event-Driven Systems, Agile/Scrum

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented scalable **microservices in Kotlin and Java**, deployed via **Docker and Kubernetes** on **AWS** and **GCP**, ensuring fault tolerance and seamless integration with third-party APIs.
- Optimized **SQL and NoSQL database schemas** (PostgreSQL, MongoDB, Redis), significantly improving query performance for large-scale data pipelines across healthcare and fintech applications.
- Automated CI/CD pipelines using **Jenkins, GitHub Actions, and Terraform**, enabling faster feature delivery and reducing deployment risks across multi-cloud environments.
- Built and maintained **event-driven architectures** with Kafka and Pub/Sub, ensuring high-throughput data ingestion, processing, and real-time analytics for mission-critical systems.
- Introduced **infrastructure-as-code practices with Terraform and Helm**, enabling reproducible deployments across staging and production clusters on AWS EKS and GCP GKE.
- Established robust **monitoring and observability stack** using **Prometheus, Grafana, and ELK**, providing actionable alerts and reducing incident response times.
- Collaborated with cross-functional teams to define API contracts, enforce **code quality standards**, and conduct design reviews for system scalability and maintainability.

- Mentored junior engineers in backend best practices, cloud architecture, and DevOps tooling, contributing to long-term team growth and capability building.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed and maintained **backend services in Node.js and Python**, containerized with **Docker** and deployed via **Kubernetes** on **AWS cloud infrastructure**, supporting high-traffic marketing automation platforms.
- Designed and optimized **relational and non-relational databases** (MySQL, PostgreSQL, MongoDB, Redis), reducing latency for critical queries powering campaign performance dashboards.
- Automated deployment workflows with **CI/CD pipelines in GitLab and Jenkins**, ensuring faster delivery cycles and rollback mechanisms for production stability.
- Built **serverless applications** using **AWS Lambda and API Gateway**, delivering cost-effective event-driven solutions for customer engagement features.
- Integrated **real-time data streaming pipelines** with Kafka and AWS Kinesis, supporting analytics workloads with sub-second processing.
- Improved **infrastructure reliability** by implementing IaC with Terraform and conducting cost optimizations across AWS accounts.
- Implemented **robust monitoring solutions** using Prometheus and Grafana, allowing proactive identification of performance bottlenecks.
- Coordinated with frontend teams to deliver **GraphQL and REST APIs**, ensuring consistency and scalability for customer-facing applications.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built and deployed **backend services in Java and Go**, leveraging **Docker and Kubernetes** for cloud-native deployments across **AWS and GCP** environments.
- Designed **data-intensive applications** using **PostgreSQL and Cassandra**, ensuring fault-tolerant replication and scalable storage for enterprise clients.
- Implemented **microservices architectures**, enabling modular scaling and independent deployments of business-critical services.
- Automated CI/CD with **Jenkins and GitHub Actions**, ensuring continuous delivery pipelines for distributed teams.
- Built **RESTful APIs and GraphQL endpoints** consumed by web and mobile clients, ensuring consistent performance and scalability.
- Conducted **system monitoring and logging** setup with ELK, Prometheus, and Grafana, reducing downtime and improving incident resolution.
- Collaborated with stakeholders to capture business requirements and translate them into high-quality technical solutions.
- Ensured adherence to **security and compliance standards**, implementing IAM roles, encryption, and secure API gateways.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia (Remote)

- Developed **Java and Spring Boot services**, deployed on **Docker** containers within AWS, ensuring scalable e-commerce integration solutions.
- Designed relational schemas with **MySQL and PostgreSQL**, optimizing transaction-heavy systems for digital commerce.
- Implemented **API-driven integrations** with third-party payment and logistics providers, ensuring seamless checkout and fulfillment flows.
- Introduced **CI/CD pipelines** using Jenkins, improving delivery reliability for multiple clients simultaneously.
- Conducted **unit, integration, and load testing** to ensure system stability under peak traffic conditions.
- Integrated **logging and monitoring** via ELK stack and Grafana, allowing proactive identification of issues.
- Worked in Agile teams with Scrum methodology, ensuring on-time delivery of client projects.
- Collaborated directly with clients to ensure requirements alignment and effective communication of technical trade-offs.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in building **Java-based enterprise applications**, focusing on backend services and database optimizations with **SQL Server and MongoDB**.
- Developed and tested REST APIs for data exchange, ensuring robust integrations with internal applications.
- Built and deployed lightweight **Docker containers** for development environments.
- Configured basic **AWS EC2 and S3 resources** to support application hosting.
- Implemented monitoring scripts and log analysis for system health checks.
- Wrote unit tests and contributed to improving CI/CD pipelines.
- Supported database migration projects, improving query performance and data consistency.
- Worked with senior engineers to understand cloud deployment, Agile processes, and best practices in software design.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- Google Cloud Professional Cloud Architect
- Docker Certified Associate

PROJECTS

- **Healthcare Analytics Platform** – Designed and led the development of a **multi-tenant healthcare analytics solution** processing millions of patient records in real time using **Kotlin, Kafka, AWS, and GCP**, enabling hospitals to generate actionable AI-driven insights.
- **Real-Time Campaign Analytics System** – Built a **marketing event streaming platform** with **Node.js, Python, Docker, AWS Kinesis, and MongoDB**, supporting millions of daily events and delivering real-time dashboards for enterprise clients.
- **Smart Property Management Platform** – Developed a **cloud-native property management SaaS** using **Java, Go, Kubernetes, PostgreSQL, and Cassandra**, automating tenant billing, maintenance tracking, and reporting for multi-tenant properties.
- **E-Commerce Integration Framework** – Implemented a **Spring Boot and Docker-based framework** on **AWS** with **MySQL/PostgreSQL**, reducing retailer onboarding time by 50% by streamlining payment and logistics integrations.
- **Cloud Migration Pilot Project** – Contributed to migrating legacy enterprise apps into **containerized AWS-hosted services** with **Docker, EC2, and MongoDB**, improving scalability and reducing infrastructure costs.
