

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Backend Engineer with 9+ years of experience designing and building high-performance backend systems across FinTech, SaaS, and eCommerce domains. Expert in **PHP (Laravel)** and modern backend stacks with strong knowledge of **Go, Node.js, Python**, and cloud-native practices. Adept at **C4 architecture modeling**, microservices, event-driven systems, **AWS/GCP cloud solutions**, and **SQL/NoSQL database optimization**. Known for delivering scalable, secure, and maintainable solutions while driving cross-functional collaboration and aligning technical execution with business strategy.

TECHNICAL SKILLS

- **Languages & Frameworks:** PHP (Laravel, Symfony), Node.js, Go, Python, Kotlin, JavaScript/TypeScript
- **Architecture & Design:** C4 modeling, Domain-Driven Design (DDD), SOLID, Microservices, Event-driven systems
- **Databases:** MySQL, PostgreSQL, SQL Server, MongoDB, Redis, DynamoDB (SQL & NoSQL expertise)
- **Cloud & DevOps:** AWS (ECS, Lambda, RDS, S3, CloudWatch), GCP (Cloud Run, Pub/Sub, Firestore), Docker, Kubernetes, Terraform, CI/CD pipelines (GitHub Actions, GitLab CI)
- **Observability & Performance:** o11y tools (Prometheus, Grafana, ELK stack, New Relic), distributed tracing, APM tuning
- **Collaboration Tools:** Jira, Confluence, Git, Agile/Scrum methodologies

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented **scalable backend services in Laravel and Node.js**, ensuring systems supported high concurrency and real-time data exchange across global clients.
- Applied **C4 architecture modeling** to document and communicate system designs, reducing onboarding time for engineers and improving system maintainability.
- Led **cloud migration to AWS**, implementing Terraform-based infrastructure-as-code and containerized deployments with Docker, cutting provisioning time by 70%.
- Built **event-driven microservices** leveraging AWS SQS and SNS, enabling asynchronous workflows that improved resilience and reduced processing latency.
- Optimized relational databases with **query tuning, indexing, and partitioning**, reducing query response time by 45% while handling millions of rows of transactional data.

- Enhanced observability by integrating **Prometheus and Grafana dashboards**, enabling real-time system monitoring and alerting on critical SLAs.
- Mentored 6 junior developers, fostering a culture of knowledge-sharing and improving overall team velocity by 30%.
- Collaborated cross-functionally with PMs, designers, and DevOps to deliver **secure and performant APIs** aligned with business priorities.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed and maintained backend applications using **Laravel and Symfony**, powering large-scale digital campaigns and CRM solutions.
- Integrated **third-party APIs and payment gateways**, ensuring secure transactions with PCI DSS compliance and advanced encryption.
- Implemented **NoSQL caching layers (Redis, MongoDB)** to enhance system performance, reducing page load times by up to 60%.
- Spearheaded migration to **containerized deployments with Docker**, enabling reproducible builds and simplified staging-to-production workflows.
- Designed **system monitoring solutions** using ELK stack, ensuring error detection and faster incident resolution.
- Conducted **code reviews and pair programming sessions**, ensuring compliance with SOLID principles and best practices in OOP.
- Automated **CI/CD pipelines with GitLab CI**, accelerating release cycles and minimizing manual deployment errors.
- Collaborated with designers and PMs to estimate project scope accurately, ensuring consistent on-time delivery.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built **scalable PHP and Node.js applications** for enterprise-level ERP and CRM platforms, achieving 99.95% uptime.
- Designed **RESTful APIs** consumed by multiple front-end clients, with robust authentication and role-based authorization.
- Integrated **PostgreSQL and MySQL with NoSQL caching layers**, ensuring optimal query performance and reducing DB costs by 30%.
- Developed **background job processing systems** handling large queues of asynchronous tasks with RabbitMQ and Redis.
- Improved **security posture** by applying OWASP recommendations, including CSRF/XSS prevention and encryption-at-rest strategies.
- Contributed to **cross-team architectural discussions** ensuring modular, reusable, and maintainable codebases.
- Implemented **data migration strategies** to seamlessly move legacy systems into modernized applications.
- Enhanced development productivity by establishing reusable code libraries and templates.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Worked on **eCommerce solutions** using PHP and Magento, implementing product catalogs, search optimizations, and custom checkout flows.
- Designed and optimized **SQL schemas and queries** for high-traffic online stores, ensuring sub-second product search performance.
- Integrated **third-party APIs (shipping, payment, inventory)** ensuring seamless multi-vendor ecosystem functionality.
- Improved **system reliability and scaling** by containerizing components with Docker.
- Developed **unit and integration tests** to improve coverage and reduce production bugs.
- Participated in **agile sprint planning**, contributing to estimations and delivering on commitments consistently.
- Collaborated with UI/UX designers to implement responsive, customer-friendly eCommerce features.
- Resolved critical **production issues under tight deadlines**, ensuring minimal downtime for global clients.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in developing backend APIs using **PHP and MySQL**, supporting early-stage SaaS products.
- Built **automation scripts** in Python to improve testing and deployment efficiency.
- Gained hands-on experience in **Linux server administration** and Git-based workflows.
- Conducted **QA testing and bug triage**, improving release quality and reducing hotfixes.
- Developed **internal documentation and diagrams**, simplifying knowledge transfer across teams.
- Implemented small-scale **NoSQL experiments with MongoDB**, contributing to feasibility assessments.
- Learned and applied **SOLID principles** in practical coding tasks under mentorship.
- Presented findings and solutions during sprint retrospectives, improving intern contribution visibility.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- Google Cloud Professional Cloud Architect
- Laravel Certified Developer
- Terraform Associate Certification

PROJECTS

- **Microservices Migration for SaaS Platform:** Led migration of monolith to microservices using **Laravel, Docker, and AWS ECS**, achieving 50% faster release cycles.
- **C4 Modeled CRM Platform:** Designed and implemented CRM system using **C4 diagrams** for clarity, reducing onboarding time for new engineers by 40%.
- **Event-driven Notification Service:** Built distributed notification system with **AWS SNS/SQS and Redis**, supporting millions of real-time events daily.
- **Observability Framework:** Implemented **Prometheus/Grafana dashboards and ELK stack pipelines**, reducing mean time to recovery (MTTR) by 60%.
