

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile Senior Software Engineer with 9+ years of full-stack experience specializing in **PHP (Laravel), Vue.js, and scalable cloud-native applications**. Proven track record of building high-performance platforms using **MySQL, Redis, Docker, and GitLab CI/CD pipelines**. Adept at developing **API-driven architectures, AI-powered automations, and secure workflows** for global businesses. Strong collaborator with deep knowledge in **object-oriented design, web security, testing frameworks, and DevOps practices across AWS and GCP**. Passionate about delivering **scalable, maintainable, and future-ready solutions** in agile teams.

TECHNICAL SKILLS

- **Backend:** PHP 8, Laravel, Node.js, Symfony, Golang, Java (Spring Boot), .NET Core
- **Frontend:** Vue.js, React.js, Angular, JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS
- **Databases:** MySQL, PostgreSQL, SQL Server, MongoDB, Redis, DynamoDB (SQL & NoSQL)
- **Cloud & DevOps:** AWS, GCP, Azure, Docker, Kubernetes, GitLab CI/CD, Terraform, CloudFormation
- **Testing & Tools:** PHPUnit, Xdebug, Jest, Cypress, Postman, JMeter
- **AI/Automation:** AI Agents, LangChain, OpenAI API, workflow automation with AI tools
- **Version Control & Collaboration:** Git, GitHub, GitLab, Bitbucket, Agile/Scrum, Jira

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led backend development of SaaS applications using **PHP 8 with Laravel and Vue.js**, ensuring modular architecture with strong OOP principles and SOLID design patterns.
- Architected and deployed **microservices with Docker and Kubernetes** across AWS, enabling seamless scaling and zero-downtime deployments under peak traffic.
- Enhanced system performance by implementing **Redis caching, optimized SQL queries, and horizontal scaling**, reducing average API response times by 40%.
- Designed and integrated **REST and GraphQL APIs** used by cross-functional teams, improving system interoperability and reducing integration complexity.
- Applied **GitLab CI/CD pipelines with automated PHPUnit tests**, ensuring fast and reliable code releases while maintaining 95%+ deployment success rates.
- Introduced **AI-driven workflow automation** for data validation and monitoring, reducing manual QA efforts and increasing productivity of the dev team by 30%.

- Conducted **peer code reviews and mentoring sessions**, elevating junior developers' skills and fostering an environment of high-quality engineering standards.
- Collaborated with product managers and stakeholders to deliver **end-to-end feature ownership**, from requirement analysis to deployment in production.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed scalable digital marketing solutions with **Laravel, MySQL, and Vue.js**, serving thousands of concurrent users across multiple regional markets.
- Built **custom API services for third-party integrations**, enabling real-time data synchronization with external advertising and analytics platforms.
- Implemented **queue systems and background jobs in Laravel** for campaign processing, ensuring uninterrupted services and optimized throughput.
- Enhanced platform reliability through **unit testing, integration testing, and Xdebug debugging**, achieving 30% reduction in production incidents.
- Deployed and containerized apps using **Docker and AWS ECS**, reducing infrastructure management overhead and improving environment consistency.
- Collaborated with UX/UI designers to implement **dynamic and responsive front-end components** in Vue.js, significantly improving client engagement.
- Optimized database queries and indexes, achieving **25% improvement in campaign report generation speed** and faster analytics insights.
- Actively participated in **Agile ceremonies** and contributed to sprint planning, improving feature delivery timelines and team alignment.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Engineered full-stack business applications with **Laravel, Angular, and MySQL**, delivering custom solutions for e-commerce and enterprise systems.
- Built **modular Laravel packages and reusable components**, accelerating development cycles and standardizing coding practices across teams.
- Introduced **Redis caching strategies** that reduced load times by 45% and improved scalability under high-traffic scenarios.
- Integrated **payment gateways, ERP APIs, and third-party services**, enabling seamless financial transactions and automated invoicing.
- Migrated legacy systems into **modern Laravel-based architectures**, improving maintainability and reducing technical debt by 60%.
- Applied **CI/CD pipelines with Dockerized environments**, ensuring smooth delivery processes and early detection of deployment issues.
- Monitored and optimized **application security and authentication flows**, implementing OAuth2 and JWT to safeguard sensitive user data.
- Conducted **system audits and performance tuning**, improving uptime reliability to 99.9% and enhancing user satisfaction metrics.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Contributed to enterprise-level projects using **PHP (Laravel), Symfony, and MySQL**, focusing on modular and maintainable code design.
- Assisted in the **design and integration of scalable REST APIs**, ensuring compatibility with client systems and mobile apps.
- Implemented **Dockerized local environments**, improving developer onboarding speed and cross-platform consistency.
- Collaborated with QA engineers to implement **automated PHPUnit test suites**, reducing regression bugs and boosting release confidence.
- Enhanced security compliance through **role-based access controls and input validation**, reducing vulnerability risks in production systems.
- Delivered **multi-language support features**, extending product reach and accessibility to international markets.
- Worked closely with senior engineers to enhance **agile workflows and code review processes**, ensuring quality and best practices adoption.
- Debugged and optimized application performance using **profiling tools and caching mechanisms**, reducing critical bottlenecks.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in full-stack application development with **PHP, JavaScript, and MySQL**, gaining professional experience in agile product delivery.
- Designed **database schemas and optimized queries**, improving efficiency of reporting features for early-stage products.
- Contributed to **front-end enhancements using JavaScript and jQuery**, delivering more interactive and user-friendly experiences.
- Implemented **basic API integrations** for internal tools, learning REST design principles and hands-on debugging.
- Participated in **QA and bug fixing sessions**, ensuring stable releases and minimizing customer-facing issues.
- Developed **internal documentation and knowledge-sharing materials**, helping onboarding of new interns and junior developers.
- Explored early concepts of **Dockerized environments**, learning container-based deployment strategies.
- Supported senior developers in **researching new frameworks and tools**, laying foundations for future modernization projects.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Developer – Associate
 - Google Cloud Professional Developer
 - Laravel Certified Developer
 - Docker Certified Associate
 - Redis Certified Developer
-

PROJECTS

- **Agency Marketplace Platform:** Built a scalable Laravel-based platform integrating Vue.js front-end, Redis caching, and MySQL, enabling high-volume agency listings and client proposals.
- **Workflow Automation with AI Agents:** Designed AI-powered automation to handle queue-based operations, anomaly detection, and proactive alerts, improving system reliability and reducing manual overhead.
- **E-commerce Microservices:** Implemented Laravel microservices for order processing, integrated with Redis and RabbitMQ for real-time updates, deployed on AWS with auto-scaling.
- **API Gateway & Security Module:** Architected a secure API gateway with JWT authentication, rate-limiting, and monitoring, ensuring compliance with security standards.
