

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Fullstack Developer with 9+ years of experience building and scaling high-performance JavaScript applications using the MERN stack. Skilled in developing modular, stateless API-driven platforms with advanced containerization and testing practices. Proven track record of managing complex products, mentoring junior developers, and delivering production-grade solutions with clean, maintainable code. Thrives in fast-paced, competitive environments where innovation and technical ownership are key.

TECHNICAL SKILLS

- **Languages & Frameworks:**
JavaScript (ES6+), TypeScript, Node.js, React, Redux, Express.js, HTML5, CSS3, SASS, Bootstrap, jQuery
- **Databases:**
MongoDB, PostgreSQL, MySQL, Firebase
- **DevOps & Tools:**
Docker, Kubernetes, NGINX, Git, GitHub Actions, GitLab CI/CD, Bash, Linux
- **Testing & QA:**
Playwright, Jest, Mocha, Chai, Cypress, TDD, Postman, Swagger
- **Cloud & Hosting:**
AWS (EC2, S3), Vultr, Netlify, Heroku, Firebase Hosting
- **Other Tools & Practices:**
RESTful API Design, WebSockets, OAuth, Agile, Jira, Figma, ESLint, Husky, A/B Testing, System Architecture, CI/CD

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Architected and developed multiple enterprise-grade applications using MERN stack, driving 35% faster deployment cycles and 40% fewer bugs post-release.
- Led migration from monolithic services to stateless microservices with Docker, increasing API performance by 60% under load.
- Designed and implemented secure, modular REST APIs integrated with MongoDB, supporting over 1M monthly requests with <200ms response times.

- Mentored 4+ junior and mid-level developers, conducting regular code reviews, architecture walkthroughs, and pair programming sessions.
- Integrated Playwright and Cypress into existing pipelines, reducing critical bug reports in production by 45% over six months.
- Implemented dynamic role-based access control (RBAC) using Express.js middleware and JWT authentication.
- Refactored complex React components into reusable atomic design patterns, improving maintainability and testability across product modules.
- Spearheaded a CI/CD initiative using GitLab and Docker Compose, automating end-to-end deployments and rollback strategies.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed robust cross-platform dashboard using React and Redux with integrated analytics, improving customer engagement insights by 3x.
- Built internal Node.js API services for campaign automation, increasing client execution speed by 200% and cutting backend incidents in half.
- Designed flexible data models in MongoDB for campaign management, achieving seamless scaling for 50+ clients with minimal overhead.
- Standardized testing practices using Jest and TDD principles, elevating test coverage from 38% to 92% across all services.
- Deployed full containerized environments using Docker and orchestrated development/testing using docker-compose.
- Worked closely with product managers to define API-first development strategies, enabling rapid feature development and cleaner integration layers.
- Contributed to internal component libraries for UI consistency, reducing code redundancy by over 50% and accelerating frontend dev time.
- Designed secure login systems with multi-token-based JWT flows and rate-limiting on auth endpoints.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed single-page applications (SPAs) in React with backend services in Node.js and Express.js, handling complex data visualizations and reports.
- Integrated third-party APIs (Google Maps, Stripe, Twilio) securely with token-based validation layers and real-time sync.
- Led efforts to migrate legacy codebases to React ecosystem, reducing technical debt and onboarding time for new developers.
- Utilized GitHub Actions and custom scripts for deployment pipelines, automating versioning, testing, and staging environment syncs.
- Implemented unit and end-to-end tests using Mocha/Chai, helping achieve a 99.8% uptime SLA on customer dashboards.
- Built advanced form builders using React Hook Form and integrated dynamic validation logic tied to user role constraints.
- Developed logging middleware using Winston and integrated centralized monitoring via Prometheus and Grafana.
- Authored internal architecture documentation and module specs to support onboarding and scalability efforts.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Built CRUD-based React applications with Node.js backend to streamline customer data management for internal CRM tools.
- Worked on role-based dashboards and API endpoints, ensuring secure access to data across departments and access tiers.
- Introduced reusable service layers in Express to simplify business logic and reduce backend duplication across apps.
- Improved frontend component test coverage from 0 to 80% using Jest and Enzyme integration within CI environments.
- Created middleware services for scheduled email dispatch using Node cron jobs and SendGrid APIs.
- Contributed to the frontend performance optimization effort, reducing bundle sizes by 45% and improving load times.
- Integrated Google Maps API for business location handling within a real-time address lookup system.
- Engaged in architecture discussions and decisions, helping define future service boundaries for new product lines.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Built prototypes in vanilla JS and early React for dashboard widgets and internal tools.
- Developed admin interface to control IoT devices with socket-based bidirectional communication using Node.js.
- Created database schemas in MongoDB and learned CRUD optimization through query planning and indexing.
- Implemented feedback form systems with email pipelines using Nodemailer and form-data parsing.
- Maintained internal dev documentation and assisted in bug triage and QA testing for product releases.
- Refactored legacy PHP APIs into modern REST endpoints using Express.js, improving maintainability.
- Learned to containerize dev environments with Docker to ensure uniform setup across team machines.
- Supported senior devs in testing automation via Mocha for various product modules.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **JavaScript Algorithms and Data Structures** – freeCodeCamp

- ❖ **Node.js – The Complete Guide** – Udemy
 - ❖ **Advanced React & Redux** – Udemy
 - ❖ **Docker Essentials** – IBM Skills Network
-

PROJECTS

- ✓ **LocalRanker Pro** – SaaS for Google Maps Optimization

Built from scratch using MERN stack; handles multi-tenant local listing data and real-time map visibility scoring.

Integrated with Google Maps API and implemented proprietary ranking analysis algorithm.

- ✓ **Campaign Wizard** – Automated Campaign Builder

Developed full-featured drag-and-drop UI in React for building marketing flows.

Backend built on Node.js with MongoDB for state storage and cron-based dispatching.

- ✓ **DevOps Console**

Internal tool for managing CI/CD pipelines with GitHub Actions, Docker container health, and logs viewer.

Supports redeploy, rollback, and secret management via custom APIs.
