

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and results-driven Senior Software Engineer with 8+ years of experience designing, developing, and deploying intelligent backend systems and machine learning applications. Proven expertise in Conversational AI, Natural Language Processing (NLP), and scalable backend services using Python, FastAPI, and ML frameworks like LlamaIndex and LangChain. Passionate about building AI-driven systems that integrate LLMs, RAG pipelines, and dynamic agentic workflows. Adept at remote collaboration, agile methodologies, and leading high-impact AI development projects from concept to production.

TECHNICAL SKILLS

- ❖ **Languages & Frameworks:** Python, FastAPI, Node.js, JavaScript, TypeScript, C#, .NET Core, SQL
- ❖ **AI/ML & NLP:** LlamaIndex, LangChain, HuggingFace, OpenAI API, RAG, spaCy, scikit-learn, TensorFlow, PyTorch, Agentic AI
- ❖ **Backend & Cloud:** REST APIs, GCP, Azure, Docker, Kubernetes, Google Kubernetes Engine (GKE), Redis, PostgreSQL, MongoDB
- ❖ **DevOps & Tools:** Git, GitHub Actions, Docker Compose, Agile/Scrum, Jira, CI/CD Pipelines
- ❖ **Other:** Conversational AI, Chatbots, Dialog Management, NLU/NLG, Vector Databases, Semantic Search

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and deployed Conversational AI pipelines using LangChain and OpenAI GPT models for a customer support chatbot deployed in multiple languages across global client portals.
- Built scalable backend microservices using FastAPI and Docker to support LLM-based AI modules and NLP pipelines in production environments.
- Implemented Retrieval-Augmented Generation (RAG) architectures with LlamaIndex and Pinecone to improve answer accuracy and user satisfaction.
- Created NLP models for intent classification, entity extraction, and response generation using spaCy and scikit-learn, improving automation rate by 32%.
- Led development of agentic AI assistants capable of handling context-aware multi-turn dialogue across healthcare and telecom domains.
- Integrated observability and monitoring tools to track ML model performance and deployed auto-scaling inference services in GCP Kubernetes clusters.

- Coordinated with front-end and DevOps teams to deliver E2E product iterations and conducted peer code reviews to ensure coding standards.
- Participated in sprint planning and technical documentation for conversational flows, pipeline architecture, and API interface design.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed voice-based assistant modules using Dialogflow and integrated them with FastAPI-based middleware for mobile and web applications.
- Worked on multilingual NLP preprocessing pipelines for sentiment analysis and named entity recognition to enhance chatbot understanding.
- Contributed to vector search infrastructure with sentence-transformer embeddings and Elasticsearch backend, improving semantic query resolution.
- Implemented auto-tagging and categorization features using BERT embeddings and classification models, increasing data processing throughput.
- Developed APIs to serve inference from fine-tuned GPT-2 models and integrated user feedback loops for continual learning.
- Refactored existing monoliths into microservices and containerized them with Docker for modular deployment.
- Actively participated in sprint retrospectives and drove ML testing framework for robust validation of pipeline logic.
- Provided L2 technical support and debugging for production ML issues and trained junior developers in Python and NLP stack.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Contributed to internal ML tools for document classification and keyword extraction, using TF-IDF and rule-based NLP logic.
- Developed custom REST APIs in C#/.NET and Python for integrating chatbot systems with enterprise CRMs and ERP software.
- Collaborated on an early prototype of a sales chatbot with scripted and dynamic responses backed by business rule engines.
- Migrated legacy systems to microservice architecture and integrated analytics for performance monitoring.
- Participated in model deployment process and Docker image optimization for lightweight ML services.
- Integrated Redis caching layer for faster retrieval of AI-generated responses and reduced API latency by 45%.
- Conducted R&D on customer intent prediction and built proof-of-concept demos for stakeholders.
- Mentored interns on RESTful service architecture, JSON schemas, and software quality practices.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Built and maintained backend APIs in Python and Flask, focusing on speed and modularity.

- Worked on lightweight chatbot logic and simple NLP keyword matchers to automate FAQ responses.
- Refactored and optimized SQL queries to improve database performance and response times.
- Contributed to browser automation scripts for testing AI chatbot flows.
- Performed unit testing, logging, and error tracking improvements for chatbot modules.
- Collaborated with design team to match bot UX with business KPIs.
- Helped document REST API endpoints and data structures for frontend integration.
- Participated in weekly retrospectives and contributed to improving agile process cadence.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in developing backend logic for a Q&A knowledge base system using early NLP techniques.
- Helped implement rule-based logic for chatbot routing and fallback behavior in customer service portal.
- Built scripts to ingest and clean unstructured text data for downstream NLP analysis.
- Documented model assumptions and edge cases for quality assurance reviews.
- Gained hands-on experience working in agile sprints and participating in daily standups.
- Supported senior developers with code reviews and integration testing.
- Wrote utility scripts to monitor API uptime and flag malformed input requests.
- Maintained version control and wrote commit messages for ML experiment tracking.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Advanced Machine Learning with TensorFlow on GCP** – Coursera/Google Cloud
- ❖ **Natural Language Processing Specialization** – DeepLearning.AI
- ❖ **LangChain for LLM Application Development** – LearnPrompting.org
- ❖ **Conversational AI: Building Chatbots with Dialogflow** – Coursera

PROJECTS

- ✓ **AG-Powered Support Assistant (Sensidev):** Designed and implemented a conversational assistant using LlamaIndex, LangChain, and OpenAI. Integrated with FastAPI and deployed on GCP GKE. Handled semantic retrieval, multi-turn dialogue, and dynamic agent responses.
- ✓ **Multilingual Intent Recognition Engine (Syscom):** Developed and trained intent classification models using spaCy and FastText. Integrated support for over 6 languages and improved recognition F1-score by 28%.
- ✓ **Document QA Bot:** Built a lightweight QA chatbot prototype with HuggingFace Transformers and context-based document search. Deployed as a microservice using Docker and Flask.
