

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative Staff-level Software Engineer with over 9 years of hands-on experience building scalable, cloud-native applications and ML-integrated systems. Expert in backend systems, microservices architecture, and API development with strong capabilities in designing production-grade machine learning infrastructure. Proven track record in leading full-cycle project delivery, mentoring teams, and driving engineering excellence across distributed environments. Adept in working with GCP, containerized deployments, data pipelines, and modern security-first software architecture.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, C++, SQL, Bash, Go (intermediate)
- **Frameworks:** FastAPI, Django, Flask, React, Vue.js, Node.js, Qt
- **Machine Learning:** Scikit-learn, TensorFlow, Keras, MLflow, spaCy
- **Cloud/Infrastructure:** Google Cloud Platform (GCP), Docker, Kubernetes, Firebase, GitHub Actions
- **Data & Storage:** PostgreSQL, MongoDB, Redis, Elasticsearch, BigQuery, Kafka
- **Tools:** Git, GitLab CI/CD, Airflow, Terraform, Prometheus, Grafana, OpenAPI, OAuth2
- **Methodologies:** TDD, Agile/Scrum, DevSecOps, Security by Design

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Architected and implemented a distributed data processing pipeline that ingested, transformed, and exposed ML predictions via secure APIs, handling over 1M data points daily.
- Designed and deployed modular FastAPI-based microservices running on GCP Kubernetes Engine with integrated logging, tracing, and failover mechanisms.
- Collaborated with ML researchers to transition experimental notebooks into productionized ML pipelines using MLflow, Docker, and GitLab CI/CD.
- Led a security-first initiative introducing OAuth2 authentication, container vulnerability scanning, and role-based access across backend services.
- Oversaw the development of a GraphQL interface on top of PostgreSQL and Redis caches to support reactive UI features in cybersecurity dashboards.
- Delivered internal tools that automated compliance reporting (DORA/NIS2) using Airflow + BigQuery pipelines.

- Mentored 4 junior engineers, facilitating code reviews, pair programming sessions, and onboarding new team members to distributed architecture best practices.
- Championed a shift toward Infrastructure-as-Code with Terraform to streamline GCP resource provisioning and ensure auditability.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed scalable backends for privacy-compliant data collection tools integrated with real-time ML scoring for targeted ad personalization.
- Engineered a hybrid cloud system leveraging GCP Pub/Sub and Firebase for reliable event ingestion and message-driven workflows.
- Integrated third-party APIs and SDKs (OAuth2, Facebook Graph, Twilio) into a modular middleware layer to support rapid feature delivery.
- Refactored legacy Flask applications into decoupled microservices with testable endpoints and centralized logging.
- Contributed to internal monitoring frameworks using Prometheus and Grafana, significantly improving SLA visibility.
- Applied LSTM and rule-based classification models in content moderation tools, optimizing response time by 40%.
- Participated in sprint planning, architecture discussions, and postmortems with cross-functional teams.
- Implemented SSO support using OpenID Connect for enterprise customer deployments.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built interactive web applications using Vue.js and Django for managing large-scale IoT deployments in logistics.
- Designed PostgreSQL schemas supporting spatial indexing and time-series sensor data with optimizations for cold-storage archiving.
- Led migration of monolithic backend to service-oriented architecture using Docker and Nginx for routing.
- Developed REST APIs for customer dashboards and exposed analytics endpoints for third-party integrations.
- Managed container orchestration with Docker Compose and later migrated workloads to Kubernetes for scaling.
- Introduced CI pipelines with GitLab runners, enforcing pre-deployment test automation and container image verification.
- Participated in vendor selection and POC evaluations for replacing analytics pipelines with Spark-based workflows.
- Wrote internal documentation and onboarding guides that improved team ramp-up speed by 60%.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Contributed to web scraping and data enrichment workflows using Python and BeautifulSoup for e-commerce intelligence tools.
- Implemented cron-based jobs for scheduled data pulls and integrated results with Elasticsearch for real-time querying.
- Helped design early prototypes of AI-driven product comparison algorithms.
- Conducted internal load testing with JMeter to benchmark backend service responsiveness.
- Wrote unit tests achieving over 85% coverage for backend utilities.
- Integrated Redis caching for commonly requested data queries, reducing API latency by 30%.
- Improved developer onboarding time by creating simple project starter templates with Docker.
- Fixed numerous bugs and vulnerabilities reported via QA automation and SonarQube.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in development of internal tools using Qt and C++ for hardware-level diagnostics.
- Maintained Python scripts to automate data transfer from embedded sensors to PostgreSQL.
- Helped implement early authentication mechanisms for device firmware updates.
- Documented low-level communication protocols for device-driver communication.
- Participated in daily standups and sprint demos, contributing to project tracking on Jira.
- Built small web dashboards using Flask to visualize collected sensor metrics.
- Ran manual and automated tests on cross-platform builds for industrial monitoring units.
- Worked with senior engineers to debug serial connection issues between devices.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ TensorFlow Developer Certificate – TensorFlow (2023)
- ❖ GCP Professional Cloud Developer – Google (2023)
- ❖ ML Ops Specialization – Coursera / DeepLearning.AI (2022)
- ❖ Advanced Python Programming – LinkedIn Learning (2022)
- ❖ Secure Software Development – Cybrary (2021)

PROJECTS

- ✓ **ML Compliance Engine**
Led design and development of a rules-driven system that verified ML outputs against GDPR and CRA regulatory rules. Integrated explainability reports (SHAP, LIME) and produced policy violation alerts in real-time.

✓ **Cross-Service ML Deployment Toolkit**

Built a reusable toolkit enabling CI/CD-based deployment of ML models to FastAPI and Flask microservices using MLflow and Docker, with rollback support and monitoring hooks.

✓ **GraphQL Cyber Dashboard**

Developed a modular data visualization and alerting dashboard with real-time GraphQL subscriptions, enabling threat intelligence teams to respond faster to critical events.

✓ **GCP Security Audit Suite**

Implemented a GCP-native audit suite using Cloud Functions, BigQuery, and Pub/Sub to detect non-compliant IAM policies and trigger auto-remediation workflows.
