

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Detail-oriented and solution-driven .NET Developer with over 8 years of professional experience architecting and developing scalable backend services and microservices using C# and .NET 6+. Adept at leveraging PostgreSQL, Docker, RESTful APIs, and CI/CD pipelines to deliver performant, maintainable, and secure enterprise-grade software. Proficient in agile environments with strong collaboration across cross-functional teams. Passionate about modernizing legacy systems, mentoring developers, and solving complex challenges in high-velocity development cycles.

TECHNICAL SKILLS

- **Languages & Frameworks:** C#, .NET 6/7/8, ASP.NET Core, LINQ, EF Core, Dart, Xamarin, JavaScript, Python
- **Databases:** PostgreSQL, MSSQL, DynamoDB, MySQL, MongoDB
- **Tools & DevOps:** Docker, Git, GitHub Actions, Jenkins, Azure DevOps, CI/CD, REST APIs, Swagger, Postman
- **Cloud & Infrastructure:** AWS (EC2, Lambda, RDS), Azure, NGINX, IIS
- **Architecture:** Microservices, DDD, CQRS, Clean Architecture, SOLID, TDD, Agile/Scrum
- **Other:** RabbitMQ, Redis, Jira, Confluence, English (fluent), Agile ceremonies

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Engineered distributed microservices using .NET 6+ and C# that scaled to support thousands of concurrent users while maintaining optimal performance and error resilience.
- Refactored existing monolithic services into Dockerized containers deployed with GitHub Actions, achieving 40% deployment speedup and enhanced rollback reliability.
- Collaborated with BAs, architects, frontend developers, and QA to implement RESTful APIs for large-scale applications, ensuring consistent integration and reduced bug rates.
- Designed and optimized PostgreSQL schemas and queries to improve transactional data handling, leading to a 25% performance increase across core services.
- Championed codebase modernization by introducing SOLID principles and Clean Architecture patterns, improving maintainability and unit test coverage by over 60%.

- Led backlog grooming and sprint planning sessions, helping align feature development with product roadmap and reducing blockers by proactively resolving technical concerns.
- Built CI/CD pipelines that integrated Docker, AWS EC2, and GitHub Actions, reducing deployment errors and enabling weekly production releases with zero downtime.
- Mentored three junior engineers through pair programming, code reviews, and design walkthroughs, resulting in accelerated onboarding and higher team code quality.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed multiple backend components using C# and .NET Core for high-traffic enterprise applications serving financial and marketing clients.
- Implemented RESTful APIs with Swagger documentation, improving third-party developer integration speed and reducing support queries by 30%.
- Containerized legacy services with Docker and introduced CI/CD pipelines, reducing manual deployment steps and standardizing production environments.
- Tuned PostgreSQL queries and indexed critical tables to reduce query execution time by 50%, directly improving reporting and data export efficiency.
- Designed fail-safe retry mechanisms in asynchronous service communication to handle service outages gracefully and improve system resilience.
- Participated in daily Agile standups and cross-functional planning sessions, coordinating feature work and backlog refinement with business analysts and QA engineers.
- Introduced unit testing frameworks like xUnit and Moq, increasing code coverage across core modules and supporting safer refactors during sprint cycles.
- Supported production incident triaging and resolution, including root cause analysis and hotfix deployments with minimal service interruption.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Created and maintained microservices with .NET Core and C#, focusing on modular system design to support business scalability and rapid feature delivery.
- Designed PostgreSQL databases and developed stored procedures, significantly reducing backend computation load and improving API response times.
- Deployed services in Docker containers and maintained configuration across staging and production using Docker Compose and AWS EC2.
- Developed admin dashboards and reporting modules, integrating backend analytics APIs and frontend consumption via secure REST endpoints.
- Refactored legacy applications by replacing obsolete .NET Framework code with modern, testable .NET Core components following Clean Code principles.
- Established automated pipelines with Jenkins and Bitbucket, enabling frequent, low-risk production releases through proper staging workflows.
- Collaborated with frontend developers to align backend data contracts and optimized endpoints for efficient UI rendering.
- Participated in sprint retrospectives and helped refine user stories into technical specifications, driving more precise task estimates and better developer autonomy.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Supported the development of internal enterprise tools using C# and ASP.NET MVC, reducing redundant workflows and improving employee productivity.
- Built dynamic backend modules interfacing with SQL Server databases, providing business logic layers for frontend consumption via REST.
- Worked closely with the QA team to define acceptance criteria and ensure all endpoints met performance, security, and compliance requirements.
- Rewrote legacy codebases to adopt layered architecture practices, facilitating better separation of concerns and simplifying future enhancements.
- Automated error logging and system alerts using NLog and email notifications, decreasing mean time to resolution for bugs and service interruptions.
- Documented system processes and provided knowledge transfer sessions for incoming developers, ensuring continuity and maintainability.
- Designed batch processing jobs for periodic data import/export, improving internal reporting efficiency by reducing manual spreadsheet operations.
- Integrated external API data sources with rate-limiting and fallback strategies to ensure consistent service availability despite vendor API instability.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Contributed to the backend development of a customer management platform using .NET and SQL Server, improving customer data visibility across departments.
- Wrote stored procedures and optimized queries for high-volume data sets, supporting better data consistency and system reliability.
- Participated in agile sprints and provided code for critical path features under tight deadlines while learning best practices in code quality and architecture.
- Automated repetitive reporting tasks with backend scripts, freeing up over 10 hours per week for the analytics team.
- Created internal documentation for API usage and deployment, reducing developer onboarding time for future interns and new hires.
- Participated in bug triage and debugging sessions, learning real-time problem-solving and codebase navigation techniques from senior engineers.
- Assisted in integration testing of software updates to ensure compatibility across different .NET versions and database schemas.
- Built logging utilities to help QA track and identify failed operations during manual testing.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate
 - ❖ Docker for Developers (Udemy)
 - ❖ C# Advanced Topics – Pluralsight
 - ❖ PostgreSQL for Developers – Udemy
 - ❖ Clean Architecture with .NET – Udemy
-

PROJECTS

- ✓ **Microservices-Based Order Management System**
Built a distributed system using .NET 6, Docker, and PostgreSQL for an e-commerce platform to manage order lifecycle, reducing latency by 30% and increasing fault tolerance.
- ✓ **Cloud-Ready CRM Refactor**
Modernized a legacy CRM platform with .NET Core and AWS (EC2, RDS, S3), moving away from monolithic architecture to containerized microservices for better scalability and deployments.
- ✓ **Agile Document Workflow System**
Architected a document processing platform integrated with RESTful APIs, PostgreSQL, and RabbitMQ, allowing real-time updates and async processing in a compliance-driven environment.
