

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-866410383/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with 9+ years of experience designing, building, and optimizing scalable backend systems in fast-paced startup environments. Proven expertise in TypeScript, Node.js, and AWS cloud infrastructure, delivering high-performance distributed systems and leading product development from inception to production. Adept in architecting robust data pipelines, driving engineering excellence, and mentoring cross-functional teams. Thrives in remote-first, autonomous roles focused on innovation and impact.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Node.js, Python, SQL
- **Backend:** Express.js, NestJS, RESTful APIs, GraphQL, WebSockets
- **Cloud & DevOps:** AWS (EC2, Lambda, S3, RDS, CloudWatch), Docker, Terraform, GitHub Actions, CI/CD
- **Databases:** PostgreSQL, MongoDB, Redis, MySQL
- **Tools:** Git, Jira, VSCode, Postman, Swagger
- **Testing:** Jest, Mocha, Supertest, TDD, A/B Testing
- **Other:** Agile/Scrum, Microservices Architecture, System Design, Serverless

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Architected and implemented a modular microservices platform in Node.js and TypeScript, achieving 98.9% uptime under high-load environments with over 500 concurrent client sessions.
- Led the design of a distributed event-driven system using AWS Lambda, SNS/SQS, and DynamoDB to support real-time data processing for a SaaS analytics product.
- Optimized PostgreSQL query performance and refactored backend logic, reducing API response time by over 60% and increasing throughput during peak usage.
- Drove the transition from monolithic architecture to a scalable serverless model, cutting infrastructure costs by 35% and improving deployment agility.
- Collaborated closely with product and design teams to deliver end-to-end features, including complex user permission flows and dynamic reporting tools.

- Developed robust CI/CD pipelines using GitHub Actions and Docker, enabling automatic deployments and reducing release cycle time from weekly to daily.
- Mentored 4 mid-level developers through code reviews, architecture sessions, and sprint planning, increasing team delivery efficiency by 40%.
- Championed test-driven development (TDD) practices, achieving 85% unit and integration test coverage across backend modules using Jest and Supertest.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Designed backend APIs using Express and TypeScript to power B2B SaaS products for marketing analytics, supporting over 1 million monthly user interactions.
- Integrated external APIs and third-party services into the company's platform, enabling real-time data ingestion and boosting customer engagement metrics by 50%.
- Implemented Redis caching strategies for hot data access and optimized database indexes to enhance response times under heavy query loads.
- Automated cloud deployments to AWS with Terraform, significantly reducing manual setup errors and ensuring infrastructure consistency across staging and production.
- Led a backend performance audit initiative that uncovered key bottlenecks and resulted in a 2x increase in overall system responsiveness.
- Contributed to architectural planning by evaluating and comparing various messaging queues (RabbitMQ, SQS) for asynchronous task execution.
- Delivered documentation and API specs with Swagger and Postman collections, enhancing onboarding for new developers and external partners.
- Facilitated daily standups, sprint planning, and retrospectives, driving Agile adoption and improving cross-team coordination and delivery speed.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed scalable backend modules for property management software using Node.js, improving tenant onboarding flow and automating lease lifecycle tasks.
- Introduced a fault-tolerant logging system leveraging AWS CloudWatch and Lambda for internal auditing and incident tracing across services.
- Refactored legacy JavaScript codebases into modular TypeScript services, reducing bug rates and increasing maintainability across multiple internal tools.
- Designed batch-processing jobs using cron-based triggers to aggregate tenant and property metrics for business intelligence dashboards.
- Implemented OAuth2-based authentication and RBAC authorization flows to ensure data security and multi-tenant isolation.
- Participated in schema design and migration planning for PostgreSQL and MongoDB, enabling seamless data model evolution without downtime.
- Delivered production-ready features across full development cycles, collaborating with frontend teams using React and RESTful APIs.
- Resolved complex integration bugs between frontend and backend systems, improving reliability of user-facing property portals.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Built backend modules for a digital publishing platform using Node.js, enhancing media rendering performance for multi-format content.
- Introduced automated testing using Mocha and Chai, improving bug detection pre-deployment and reducing QA cycles by 35%.
- Designed role-based access control for editorial and admin interfaces, enforcing strict content publishing workflows.
- Implemented notification services for editor actions and publishing updates using WebSockets and Redis pub/sub model.
- Collaborated with UI team to integrate RESTful endpoints into Angular frontend, ensuring seamless editorial interactions.
- Assisted in cloud migration efforts to AWS, provisioning EC2 and S3 resources for faster asset management.
- Integrated rich text editor libraries and handled backend formatting logic for export-ready publications.
- Optimized JSON payloads and compressed media files, enhancing mobile performance for international clients.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Developed internal tools in Node.js for automating file conversions and syncing updates between servers, reducing manual errors by 80%.
- Assisted in API development for customer portals, working with senior engineers to build reliable endpoints for data access.
- Created bash scripts to schedule and monitor data backup jobs, improving system resilience during server downtimes.
- Participated in bug triaging and resolution, learning best practices in debugging, logging, and writing maintainable code.
- Integrated frontend updates into client applications using AJAX and REST APIs to improve user feedback on form submission.
- Designed JSON schema contracts for data interchange across services, enforcing consistent API behavior.
- Attended daily scrum meetings and pair programming sessions, enhancing understanding of Agile methodologies.
- Documented legacy systems and created onboarding notes for new interns, streamlining training and handovers.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science

2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
 - ❖ Node.js Certification – OpenJS Foundation
 - ❖ Advanced TypeScript – Udemy
-

PROJECTS

- ✓ **High-Throughput Network Analysis Platform**
Led backend development of a real-time communication traffic platform using Node.js and AWS Lambda, processing over 200K messages/minute and providing actionable insights to enterprise clients.
- ✓ **Event-Driven Data Pipeline**
Built a scalable data ingestion and transformation pipeline using AWS S3, SQS, and Lambda, processing gigabytes of event logs per day for a SaaS product in the analytics space.
- ✓ **Multi-Tenant SaaS Infrastructure**
Engineered authentication, role management, and billing logic in a Node.js-based SaaS platform supporting isolated tenant environments and scalable per-client deployments.
