

# CRISTOFF STAN

## Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com  
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

## PROFESSIONAL SUMMARY

Seasoned Fullstack Engineer with 9+ years of hands-on experience in building scalable, high-performance web platforms using NodeJS, TypeScript, Angular, MongoDB, and RabbitMQ. Proven success in leading cross-functional teams, improving system architecture, and delivering SaaS products in fast-paced startup environments. Expert in test automation, code quality, and reducing technical debt while mentoring junior engineers to elevate engineering standards.

## TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, HTML5, CSS3, SCSS, SQL
- **Frontend:** Angular, React, Redux, RxJS, Webpack, Tailwind
- **Backend:** NodeJS, ExpressJS, RESTful APIs, GraphQL, WebSockets
- **Databases:** MongoDB, PostgreSQL, MySQL
- **Messaging & Queues:** RabbitMQ, Kafka
- **Testing:** Jest, Mocha, Cypress, Jasmine, Chai, Test-Driven Development (TDD)
- **Cloud & DevOps:** AWS, Docker, Git, GitHub Actions, CI/CD, Linux
- **Tools:** Jira, Confluence, Figma, Postman

## WORK EXPERIENCE

### Senior Software Engineer

#### Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Engineered fullstack features for a SaaS analytics platform using NodeJS, TypeScript, Angular, and MongoDB, improving reporting load times by over 60%.
- Led architectural redesign of legacy services, introducing RabbitMQ for microservice communication and reducing inter-service latency by 45%.
- Integrated GraphQL endpoints into existing REST API services to support flexible querying patterns across frontend applications.
- Mentored junior engineers through code reviews, technical sessions, and pairing, which reduced onboarding ramp-up time by 30%.
- Designed reusable Angular UI components and integrated them with scalable services, ensuring UI consistency across modules.
- Developed and maintained automated test suites (unit, integration, E2E) using Jest and Cypress, improving test coverage from 42% to 91%.

- Diagnosed and eliminated bottlenecks in MongoDB aggregation pipelines, enhancing data retrieval speeds for enterprise dashboards.
- Initiated and led weekly refactoring sprints to address technical debt and deprecated dependencies, extending codebase maintainability by years.

## **Software Engineer**

### **Syscom Digital**

**October 2019 – August 2021**

Bucharest, Romania (Remote)

- Created dynamic dashboards and campaign analytics modules using Angular and RxJS with NodeJS backend, serving over 2M monthly users.
- Architected internal messaging services with RabbitMQ to decouple real-time notification systems, enabling async processing and zero downtime deployments.
- Applied TDD principles across the stack, using Mocha and Chai to implement reliable testing infrastructure integrated with CI pipelines.
- Improved existing REST APIs by refactoring into GraphQL to support complex client querying and reduce frontend-round trips.
- Implemented user permission system using JWT and middleware policies, significantly improving authentication and session security.
- Collaborated with product managers to define scalable solutions, translating business logic into technical features with precise effort estimation.
- Introduced documentation-as-code practice using Swagger and GraphQL playgrounds, reducing developer onboarding time by 40%.
- Led incident response efforts for production bugs, implementing alerting and rollback automation that decreased average recovery time by 70%.

## **Software Developer**

### **Soft Build**

**June 2016 – July 2019**

Timișoara, Romania (Remote)

- Developed fullstack features using Angular for the frontend and NodeJS with Express on the backend to serve a commercial project management SaaS product.
- Refactored data models in MongoDB and optimized document schema designs, reducing query complexity and improving performance by over 50%.
- Designed and implemented role-based access control system for multi-tenant architecture, enhancing product security across all tiers.
- Deployed automated testing pipelines using Jest and Selenium, integrating QA feedback loops into CI/CD flows to improve release confidence.
- Created reusable RESTful services with modularity in mind, which were later containerized and scaled across environments using Docker.
- Built in-app notification systems using WebSockets and RabbitMQ for live collaboration features across distributed teams.
- Contributed to UI/UX consistency by integrating Figma-designed components and optimizing responsiveness across all screen sizes.
- Engaged in technical discovery with clients, converting business requirements into backlog stories and sprint deliverables with agile planning.

**Software Developer**  
**Decima Digital**  
**November 2015 – April 2016**  
Tallinn, Estonia

- Contributed to development of an internal dashboard system using AngularJS and NodeJS, facilitating real-time data visualization.
- Designed REST API endpoints and wrote integration tests with Postman collections to validate consistency across deployments.
- Improved frontend performance by reducing bundle sizes with Webpack tree-shaking, which improved load times by 35% across mobile users.
- Partnered with senior engineers to refactor codebase structure and eliminate cyclic dependencies, enhancing code readability and debugging.
- Authored clear developer documentation and set up version control conventions, enabling seamless project handovers and scaling.
- Worked closely with QA to triage bugs using JIRA and ensured robust fixes were delivered ahead of weekly sprints.
- Migrated legacy code into modular service-oriented structure, enabling independent testing and better dependency isolation.
- Refactored client-side data models for compatibility with MongoDB document structures and improved API response standardization.

**Software Developer Intern**  
**Borna Technology**  
**September 2014 – August 2015**  
Tallinn, Estonia (On-Site)

- Developed proof-of-concept fullstack features under supervision using NodeJS, MongoDB, and Angular, contributing to internal CRM tools.
- Created automation scripts to seed mock data for test environments, enabling better QA productivity during release cycles.
- Implemented client-side form validation and API error handling patterns that improved user experience consistency.
- Built internal documentation using Markdown and Git, establishing knowledge transfer resources for future interns.
- Attended agile ceremonies and assisted in sprint planning by evaluating minor task complexity and time estimates.
- Shadowed senior engineers in backend code reviews and learned to apply design patterns such as MVC and observer pattern.
- Researched and benchmarked third-party UI libraries to support frontend rebranding initiatives.
- Developed test scripts using Jasmine to validate feature correctness and ensure minimal regression after updates.

---

## **EDUCATION**

**Tallinn University**

Bachelor's Degree in Computer Science,  
**2010 – 2014**

---

## CERTIFICATIONS

- ❖ Advanced Node.js Microservices – Udemy, 2024
  - ❖ MongoDB for Developers – MongoDB University, 2023
  - ❖ Testing JavaScript with Jest – TestingLibrary, 2023
  - ❖ Building Scalable APIs with GraphQL – Codecademy, 2023
  - ❖ AWS Cloud Practitioner Essentials – Amazon, 2022
- 

## PROJECTS

- ✓ **SaaS Lead Generation Platform** – *NodeJS, Angular, MongoDB, RabbitMQ, AWS*  
Built a cloud-native lead generation SaaS that handles real-time campaign analytics, CRM syncing, and user segmentation across roles and regions.
- ✓ **GraphQL Microservice Gateway** – *GraphQL, TypeScript, Docker*  
Engineered a GraphQL gateway that federates APIs from different microservices, reducing cross-service chatter and unifying data access layers.
- ✓ **CI/CD Automation Toolkit** – *GitHub Actions, Jest, Cypress*  
Created reusable GitHub workflows that automate testing, linting, building, and deployments with rollback strategies for multiple staging environments.
