

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Backend-focused Senior Software Developer with over 9 years of professional experience in designing scalable backend systems, specializing in Node.js and cloud-native deployments using Google Kubernetes Engine (GKE) within the Google Cloud Platform (GCP). Proven track record of delivering high-performance microservices for communications and media clients. Adept at building robust CI/CD pipelines, managing distributed systems, and leading cross-functional teams in agile environments.

TECHNICAL SKILLS

- ❖ **Languages:** Node.js, TypeScript, JavaScript, Python
- ❖ **Frameworks:** Express.js, NestJS, Hapi.js
- ❖ **Cloud Platforms:** Google Cloud Platform (GCP), Firebase
- ❖ **Containerization:** Docker, Kubernetes (GKE), Helm
- ❖ **CI/CD Tools:** GitHub Actions, GitLab CI, Jenkins
- ❖ **Databases:** PostgreSQL, MongoDB, Redis
- ❖ **Monitoring:** Prometheus, Grafana, Google Cloud Monitoring
- ❖ **Others:** REST APIs, GraphQL, WebSockets, NGINX, Terraform, Agile/Scrum

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented scalable microservices architecture using Node.js and deployed workloads to GKE, ensuring optimal use of containerized infrastructure.
- Migrated legacy backend systems to Google Cloud Platform with zero downtime, introducing auto-scaling and load balancing via GKE Ingress.
- Led performance optimization efforts using Prometheus and Grafana dashboards to monitor application health, reducing API latency by 40%.
- Integrated CI/CD pipelines with GitHub Actions and Helm charts for seamless rollout and rollback of production releases across Kubernetes clusters.
- Developed internal tools and REST APIs used by media clients for real-time audience analytics, processing over 1M events per day.
- Collaborated with frontend teams to define API contracts and deliver backend logic for dynamic user engagement modules in broadcasting platforms.
- Secured backend systems by implementing OAuth 2.0 authentication, Google IAM policies, and fine-grained access control for sensitive endpoints.

- Participated in sprint planning and code reviews, driving engineering excellence and introducing standardized Node.js service templates for reuse across projects.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Built and maintained marketing automation backends for digital campaigns using Node.js, Express, and MongoDB, scaling to support 2M users.
- Implemented CI/CD workflows using GitLab CI and Kubernetes manifests, automating test, build, and deployment processes across multiple environments.
- Deployed services to GKE, configuring horizontal pod autoscaling and using Helm for templated infrastructure deployment.
- Developed analytics services that collected user interactions and visualized campaign performance data via integrated dashboards.
- Created middleware and message queues (using Redis and RabbitMQ) to support asynchronous processing of push notifications and SMS delivery.
- Collaborated with cross-functional teams to develop GDPR-compliant data pipelines for user data collection, encryption, and retention.
- Integrated cloud logging and tracing with Google Cloud's Operations Suite, enabling proactive troubleshooting and uptime improvements.
- Led backend integration efforts with external CRMs and advertisement APIs, improving campaign targeting and audience segmentation accuracy.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed server-side logic for enterprise communication platforms in Node.js, managing data routing and real-time event broadcasting.
- Utilized Kubernetes for orchestrating containerized services and enforced security best practices through network policies and role-based access control.
- Built RESTful APIs and integrated WebSocket endpoints for high-frequency messaging across mobile and web applications.
- Maintained scalable PostgreSQL schemas and indexing strategies to enhance query performance and data integrity under load.
- Created and documented public API SDKs to enable third-party developers to embed platform functionality into their apps.
- Designed and implemented GCP Pub/Sub pipelines for asynchronous processing and data streaming.
- Developed Terraform scripts for provisioning cloud infrastructure and maintaining consistent dev/stage/prod environments.
- Wrote unit and integration tests using Jest and Mocha, maintaining 85%+ code coverage across backend services.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Developed backends for e-commerce media portals using Node.js and deployed services to Google Cloud Functions and Firebase Hosting.

- Integrated content delivery systems using GCP Storage, optimizing image and video rendering times across global edge locations.
- Created CMS-integrated backend services allowing marketing teams to manage media assets and digital campaigns independently.
- Implemented authentication and authorization layers with Firebase Auth and custom claim-based access control for admin dashboards.
- Developed API rate-limiting and quota enforcement to prevent abuse and ensure platform stability.
- Migrated monolithic Node.js codebases into modular microservices aligned to domain-driven design principles.
- Participated in daily standups and pair programming sessions to accelerate project delivery cycles.
- Delivered multiple MVPs used by telecom clients to demo real-time analytics and streaming solutions.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Contributed to development of backend modules in Node.js for media monitoring tools used by communication firms.
- Built data scrapers and ingestion pipelines to pull video/audio metadata and push it into structured NoSQL databases.
- Assisted in deploying early-stage services to Google App Engine and Firebase, supporting A/B tested feature rollouts.
- Created unit tests and wrote API documentation to improve maintainability and support onboarding of new developers.
- Participated in sprint retrospectives, suggesting improvements to code review and QA processes.
- Conducted benchmarking tests to evaluate backend API performance under high concurrency conditions.
- Helped automate testing workflows for multiple API endpoints, integrating with Postman and Newman CLI tools.
- Worked alongside senior developers to debug production issues related to service availability and latency.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ **Google Cloud Certified – Associate Cloud Engineer** – Google
 - ❖ **Node.js Services Development Specialization** – Coursera / The Hong Kong University
 - ❖ **Kubernetes for Developers** – Udemy
 - ❖ **Cloud DevOps with GCP** – Udacity
-

PROJECTS

- ✓ **GCP-Based Media Analytics Platform**

Built a scalable backend using Node.js deployed on GKE that handled over 10M requests/month. Implemented real-time data pipelines and dashboards for a global broadcasting company.

- ✓ **Campaign Engine for Telecom Client**

Designed and deployed a promotional campaign backend with support for SMS/Email push in Node.js. Deployed using Kubernetes and CI/CD pipelines, serving 3M+ users.

- ✓ **Content Delivery Optimizer**

Worked on a service that intelligently cached and served media content from GCP buckets via Node.js APIs. Achieved 60% reduction in load times across multiple geographies.
