

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Senior Backend Engineer with over 9 years of hands-on development in scalable systems and production-grade applications. Expert in Node.js, microservices, messaging queues (RabbitMQ, Kafka), and CI/CD practices. Proven track record of designing robust backend systems, leading cross-functional teams, and implementing performance-optimized services in Agile environments.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, SQL, HTML5, CSS3
- **Frameworks & Libraries:** Node.js, Express.js, NestJS, Fastify
- **Architecture:** Microservices, RESTful APIs, Serverless
- **Messaging Systems:** RabbitMQ, Kafka
- **DevOps & Tools:** Docker, GitHub Actions, Jenkins, Terraform, AWS, GCP
- **Databases:** MongoDB, PostgreSQL, MySQL, Redis
- **Testing & CI/CD:** Jest, Mocha, Chai, Cypress, GitHub Actions, GitLab CI
- **Methodologies:** Agile, Scrum, TDD, CI/CD

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Developed scalable backend microservices using Node.js and Express, deployed across AWS infrastructure with automated CI/CD pipelines.
- Designed and implemented event-driven architecture with RabbitMQ to decouple systems and improve throughput in high-load environments.
- Led backend migration of a legacy system to a containerized microservices architecture using Docker and Kubernetes.
- Created RESTful APIs and integrated frontend applications using secure and robust endpoints, focusing on authentication and session management.
- Improved backend performance by implementing caching strategies with Redis and optimizing database queries in PostgreSQL.
- Collaborated closely with frontend, DevOps, and product teams in a fully Agile setup, leading sprint planning and retrospectives.
- Participated in architecture reviews, mentoring junior developers and ensuring adherence to clean code and security best practices.

- Proactively resolved production incidents and performance bottlenecks to maintain 99.99% system uptime under global usage.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Delivered multiple backend services in Node.js and Fastify, interfacing with real-time marketing automation systems.
- Architected fault-tolerant messaging flows using Kafka, handling millions of events daily without data loss.
- Built CI pipelines on GitLab and GitHub Actions for automatic testing, linting, and deployment across environments.
- Developed role-based access control (RBAC) and fine-grained permissions for internal management systems.
- Integrated third-party services including Stripe, Twilio, and Firebase, streamlining communication and payment workflows.
- Monitored and improved API response time by refactoring routes and introducing load balancing strategies.
- Advocated for unit and integration test coverage improvements, increasing backend test reliability by 40%.
- Participated in regular code reviews, promoting modular, testable, and reusable code patterns.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built backend APIs with Node.js and MongoDB for a construction management platform, used by over 20K users.
- Designed RESTful API architecture from scratch and documented endpoints using Swagger.
- Led the implementation of a background task processor using Bull.js to handle long-running operations asynchronously.
- Migrated monolithic applications to microservices, allowing team scaling and independent deployments.
- Worked on server-side input validation and sanitization, significantly reducing injection vulnerabilities.
- Implemented analytics pipelines for user activity, helping stakeholders understand feature engagement.
- Actively contributed to feature grooming, sprint estimations, and Agile delivery.
- Set up centralized logging and monitoring with ELK stack to improve incident detection and traceability.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Delivered backend enhancements for e-commerce platforms using Node.js and MySQL, improving checkout speed by 30%.
- Created reusable middleware for authentication and error handling.
- Integrated Elasticsearch for high-performance search capabilities across product catalogs.

- Automated deployment scripts using Bash and Jenkins for QA/staging environments.
- Participated in client demos and daily standups in a fully remote Agile setup.
- Provided production support, reducing issue resolution time through structured debugging practices.
- Optimized SQL queries and added indexes, leading to noticeable improvements in dashboard load times.
- Wrote backend unit tests to improve code confidence and maintainability.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Supported development of internal tools using Node.js, Express, and MongoDB.
- Wrote custom CLI utilities for automation of build and deployment processes.
- Refactored legacy code, replacing callbacks with Promises and async/await for improved readability.
- Contributed to API development and participated in early-stage project planning.
- Developed frontend-backend integration test scripts with Postman and Newman.
- Assisted in the setup of local development environments and team onboarding documentation.
- Explored implementation of JWT-based authentication systems in demo projects.
- Shadowed senior engineers in code reviews and adopted best practices early in career.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Solutions Architect – Associate (2023)
- ❖ Node.js Microservices Certification – Udemy (2022)
- ❖ Kafka for Developers – Confluent Academy (2021)

PROJECTS

✓ **Realtime Trading Analytics Dashboard**

- Built a microservices-based backend system in Node.js with Kafka integration for event streaming and real-time dashboard updates.
- Deployed services on AWS ECS using CI/CD pipelines managed via Terraform and GitHub Actions.

✓ **Scalable Notification Platform**

- Architected a notification service using RabbitMQ to send email/SMS/push alerts asynchronously for a global client base.

- Designed for high throughput and integrated with fallback providers to ensure delivery guarantee.
