

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and performance-driven Senior Software Engineer with over 9 years of experience designing, building, and optimizing scalable and user-centric web applications. Specialized in React, Node.js (Fastify), GraphQL, and functional programming paradigms with a proven track record in delivering high-performance systems within FinTech and investment platforms. Passionate about system architecture, API design, clean code, and cross-functional collaboration in fully remote and globally distributed teams.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, HTML5, CSS3, GraphQL, SQL, Bash
- **Frameworks & Libraries:** React, Fastify, Node.js, Redux, Next.js, Apollo Client, Tailwind CSS
- **Architecture & Patterns:** Microservices, RESTful APIs, Serverless, Functional Programming (FP), Domain-Driven Design (DDD)
- **Databases:** PostgreSQL, MongoDB, MySQL
- **Testing & CI/CD:** Jest, Mocha, Cypress, GitHub Actions, GitLab CI, Docker
- **Tools:** Figma, Webpack, Vite, ESLint, Prettier, Postman, Insomnia
- **Practices:** TDD, A/B Testing, Agile, Pair Programming, Code Reviews

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented distributed front-end architectures using React, Redux, and Next.js to serve scalable investment dashboards for private capital stakeholders.
- Built performance-optimized Fastify APIs that integrated with third-party financial data aggregators and automated transaction reconciliation pipelines.
- Introduced GraphQL APIs using Apollo Server to reduce over-fetching and improve frontend performance, enhancing investor dashboard responsiveness.
- Championed a functional programming approach across the codebase, enabling safer state handling, reducing mutation bugs, and increasing overall test coverage.
- Led a cross-functional squad in delivering a financial KYC module integrated with regulatory compliance APIs; reduced onboarding time by 60%.
- Conducted architecture reviews, mentoring peers on modularity, composability, and clean-code principles; improved team velocity and consistency.

- Implemented JWT-based authentication with role-based access control across multi-tenant applications to support enterprise FinTech clients.
- Collaborated closely with product, sales, and legal teams to deliver compliance-aware fintech features in line with evolving regional regulations.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Delivered performant single-page applications using React and custom hooks architecture, powering campaign tracking platforms used by financial marketers.
- Developed Node.js backend microservices using Fastify with PostgreSQL support, reducing API response times by over 40% under high load.
- Integrated secure payment processing systems using Stripe and ensured compliance with GDPR and financial industry standards.
- Implemented A/B testing infrastructure using Google Optimize and in-house analytics to boost client conversion rates and reduce churn.
- Led the rewrite of a legacy PHP application into a modern TypeScript-based full-stack system using React and Node.js, reducing maintenance overhead.
- Automated deployment workflows with GitHub Actions and Docker for seamless environment consistency across dev/staging/production.
- Established linting, testing, and documentation standards that were adopted across engineering teams, improving code quality and onboarding.
- Participated in product roadmap sessions and contributed to architecture decisions focusing on modularity and scalability.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built investment profiling tools and analytics dashboards in React, enabling visualization of investor sentiment and risk indices.
- Maintained Node.js REST APIs supporting 1M+ data points for institutional portfolios; optimized DB queries, reducing latency by 35%.
- Created reusable functional utilities that enhanced type safety and reduced duplicated logic across multiple frontend applications.
- Collaborated with UX designers to deliver responsive UI components using Tailwind CSS and ensured accessibility compliance (WCAG 2.1).
- Deployed infrastructure using Docker Compose for local environments and AWS ECS for production-grade clusters.
- Worked with QA and data teams to trace production bugs using custom telemetry and monitoring solutions.
- Migrated legacy jQuery interfaces to modern React SPAs, resulting in a 50% increase in client engagement metrics.
- Maintained detailed internal and external API documentation, ensuring smooth integrations and faster onboarding for partners.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed Kafka-enabled microservices that interfaced with CRM and email dispatch systems using Protobuf and REST APIs.
- Created internal monitoring tools to track event lag in Kafka consumers, improving system observability and response time.
- Contributed to implementation of secure OAuth2 authentication flows across client-facing React dashboards.
- Worked in a test-driven environment and implemented CI pipelines to maintain high code quality across microservice deployments.
- Participated in the transition from monolith to service-based architecture in a startup financial product.
- Integrated Elasticsearch for fast search capabilities across high-volume customer communication data.
- Collaborated with product managers and non-technical stakeholders to plan quarterly development goals.
- Provided technical documentation and onboarding resources for junior engineers and cross-team collaboration.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Developed proof-of-concept IoT dashboards powered by Node.js and D3.js, visualizing real-time data for internal projects.
- Supported integration of Kafka into internal analytics pipelines to manage large sensor-based data streams.
- Conducted performance audits on web interfaces to improve page load speed and responsiveness across mobile devices.
- Participated in agile rituals, including daily stand-ups and sprint planning, gaining foundational exposure to full product lifecycle.
- Documented internal APIs and created usage examples for frontend developers and API consumers.
- Supported CI/CD setup with Jenkins for Node.js services and React client apps.
- Wrote unit and integration tests for Node.js services using Mocha and Chai frameworks.
- Learned and contributed to discussions on functional programming principles and their application in JavaScript.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Certified Node.js Developer, OpenJS Foundation, 2023
 - ❖ Functional Programming in JavaScript, Frontend Masters, 2022
 - ❖ Advanced React, Meta Professional Series, 2021
-

PROJECTS

- ✓ **Private Investment Analytics Platform**

Led frontend and API design for a platform that visualized private equity trends across regions using React, GraphQL, and D3.js. Integrated JWT-based auth, audit logging, and role-based dashboards.

- ✓ **Transaction Monitoring Automation**

Built Node.js/Fastify microservices to automate detection of suspicious transactions across multiple accounts using pattern-based anomaly checks. Integrated email alerts and report generation.

- ✓ **Investor Risk Profiler**

Implemented React-based tool that helps classify investors by risk tolerance. Utilized functional programming for reliable state transitions and clean business logic management.
