PROFESSIONAL SUMMARY

Experienced Full Stack Developer with 8+ years across mobile-first architectures and scalable backend platforms, passionate about building high-impact healthcare and AI solutions. I specialize in Node.js, React Native, NestJS, Azure, and data-driven APIs using both SQL and NoSQL, with a strong track record of leading mobile and backend integrations in cross-functional teams.

TECHNICAL SKILLS

- **Frontend:** React, Next.js, React Native, Angular
- **Backend:** Node.js, NestJS, Express.js, C#, Python
- **Mobile:** React Native (iOS/Android), Expo
- **Cloud:** Microsoft Azure, AWS, GCP
- **Databases:** PostgreSQL, MySQL, MongoDB, Firebase, Redis
- **DevOps:** CI/CD, Docker, GitHub Actions, GitLab CI
- **Architecture:** RESTful APIs, Microservices, Event-driven design
- **Testing:** Jest, Mocha, Cypress
- **Other:** TypeScript, JavaScript, Git, Agile/Scrum

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led the development of cross-platform health and finance apps using React Native integrated with NestJS and Firebase, serving over 10K active users.
- Architected scalable Node.js microservices deployed to Azure Functions with Cosmos DB and blob storage integrations for real-time sync and analytics.
- Integrated secure REST APIs for health data transmission and device telemetry using JWT, OAuth2, and encrypted storage layers.
- Developed backend schedulers using CRON and Queue Workers to automate health notifications and alerts via SMS and push services.
- Created reusable mobile components in React Native with animated transitions, dark mode, offline sync, and biometric auth using Expo SDK.

- Built CI/CD pipelines using GitHub Actions for automatic testing, staging deployment, and production rollout on Azure Web Apps.
- Collaborated closely with UI/UX and QA to ensure WCAG accessibility and real-device testing with BrowserStack and Detox.
- Mentored 3 junior developers in best practices, code quality, and modular design for long-term project scalability and maintainability.
- Participated in cross-team architecture meetings to evolve REST-based services into event-driven services using Azure Event Grid.
- Built custom metrics dashboards with Application Insights and Log Analytics for backend performance and error tracking.
- Designed relational schemas for PostgreSQL and also built complementary NoSQL models using Firebase Firestore for mobile-first use cases.
- Worked on multi-lingual mobile support with right-to-left support and internationalization using i18next in React Native.
- Supported GDPR compliance across backend and mobile layers with role-based access controls and audit logging.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built backend campaign engines in Node.js and Express for customer engagement apps used in digital marketing platforms.
- Worked on mobile-first loyalty systems using React Native with barcode scanning, wallet integration, and campaign rewards sync.
- Migrated legacy REST services to modular NestJS architecture and enhanced data validation, monitoring, and versioning.
- Designed and implemented backend analytics engine for consumer behavior using MongoDB aggregation pipelines and indexed queries.
- Built mobile-friendly REST endpoints with custom middlewares, rate-limiting, and CORS policy enforcement.
- Created custom CMS admin dashboards in React with dynamic components and analytics tracking.
- Integrated AWS Lambda for scheduled reporting tasks and serverless log aggregation using CloudWatch Logs and S3 exports.
- Contributed to mobile offline mode with Redux persistence, background syncing, and custom error recovery strategies.
- Integrated external APIs for user authentication (OAuth2), maps (Google Places), and payment (Stripe).
- Participated in weekly sprint planning, architecture refactoring, and tech evaluation meetings with product team.
- Applied CI/CD with GitLab runners for both backend and mobile pipelines including auto-versioning and tagging.
- Built dockerized backend services with dev/prod configurations and local stack for fast testing.
- Authored comprehensive documentation and Swagger specs for backend APIs consumed by frontend and 3rd-party partners.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed React-based insurance portals and backend APIs in Node.js and Express, integrated with PostgreSQL and Redis.
- Built notification infrastructure using webhooks and email/SMS APIs for time-sensitive event triggers.
- Refactored large legacy monolith into modular Node microservices and deployed on AWS ECS with centralized logging.
- Enhanced database indexing strategy and introduced materialized views for reporting modules used by operations team.
- Built REST APIs with advanced filtering, pagination, and authorization logic, supporting both public and internal use.
- Led transition to Git-based workflows and introduced code review checklists, resulting in 30% fewer post-release bugs.
- Maintained end-to-end testing suites using Cypress for frontend and Mocha for backend APIs.
- Integrated S3-based media storage and CloudFront caching for mobile app assets and document uploads.
- Collaborated with designers on responsive frontend layouts using CSS-in-JS, Flexbox, and custom themes.
- Created shared TypeScript SDKs to unify communication between frontend and backend and reduce duplication.
- Contributed to the development of hybrid mobile apps using Ionic before transitioning to React Native.
- Tracked analytics via Segment and Mixpanel to guide product iteration and A/B testing.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Designed small-scale web applications in AngularJS and integrated them with Laravel APIs backed by MySQL.
- Built API services using REST standards and ensured consistent serialization/deserialization patterns.
- Implemented user dashboards with secure login, profile management, and real-time notification features.
- Used GCP Firebase for push notifications and data sync in a real-time feedback tool for clients.
- Participated in frontend architecture planning for scalable multi-page client apps with reusable components.
- Improved test coverage across frontend with Jasmine and backend with PHPUnit.
- Automated deployment process using FTP-based CI and later migrated to Git-based CI with Bitbucket Pipelines.
- Supported minor updates to legacy PHP apps and transitioned part of them to modern Laravel codebases.
- Refined UI/UX feedback from customer success team and made iterative updates on staging.
- Built audit logging and version tracking for sensitive user actions and form submissions.
- Managed ticket updates in Jira and coordinated with QA for reproducible bug scenarios.
- Trained junior team members on Git usage, project setup, and debugging strategies.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in the development of mobile-first customer feedback tools with React and Express backend.
 - Built REST APIs and integrated them with MongoDB for fast prototyping and quick CRUD interfaces.
 - Implemented basic mobile app layouts with React Native using Expo and debugged cross-platform issues.
 - Supported backend testing with Postman and manual QA regression tasks for releases.
 - Introduced Git workflows and managed version control across team projects and staging deployments.
 - Migrated simple web forms from jQuery to React and removed legacy code from main UI components.
 - Worked with senior devs to optimize query performance and avoid unnecessary DB fetches.
 - Contributed to multilingual support (Estonian + English) across UI elements and backend content responses.
 - Wrote usage documentation and “getting started” guides for new interns.
 - Helped integrate mobile app telemetry logs for bug reporting and analytics.
 - Built admin interfaces to view user feedback using Bootstrap and DataTables.
 - Tracked feature usage with basic analytics and reported metrics weekly.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate
 - ❖ AWS Certified Developer – Associate
 - ❖ Google Cloud Associate Cloud Engineer
 - ❖ MongoDB Developer Certificate
 - ❖ React Native Advanced by Meta
 - ❖ Node.js: Microservices and NestJS – Udemy
-

PROJECTS

gSense Companion App – Health Monitoring Platform

- Built backend microservices in Node.js/NestJS integrated with React Native frontend to handle health metrics, wearable sync, and symptom logging.

- Used Azure Functions, Cosmos DB, and Application Insights for real-time logging, scaling, and backend observability.

WellnessAI – AI-driven Recommendations for Daily Health

- Led backend system in Python + FastAPI, with machine learning models on GCP Vertex AI, served over REST and integrated with mobile frontend.
