PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with 9+ years of professional experience across scalable B2C SaaS platforms, microservices, and distributed systems. Adept at leading remote cross-functional teams, designing modular architectures, and delivering high-performing, production-ready solutions using Node.js, React.js, NestJS, and PostgreSQL. Looking to join a product-focused, innovation-driven company where I can drive engineering excellence and contribute to the launch and growth of impactful digital products.

TECHNICAL SKILLS

- **Languages & Frameworks:** TypeScript, JavaScript, Node.js, NestJS, React.js, Next.js, Express.js, HTML5, CSS3, SCSS
- **Frontend:** React.js, Redux, Next.js, TailwindCSS, Recharts, Zustand, TanStack Query
- **Backend:** Node.js, NestJS, Express.js, REST APIs, WebSockets
- **Databases:** PostgreSQL, MongoDB, MySQL, Redis
- **Cloud & DevOps:** AWS (EC2, S3, Lambda), Docker, GitHub Actions, GitLab CI/CD, Vercel, Netlify
- **Architecture:** Microservices, Domain-Driven Design, Event-Driven Architecture, Modular Monoliths
- **Tools:** Jira, Confluence, Git, Figma, Storybook, Postman
- **Testing & Quality:** Jest, Mocha, Cypress, ESLint, Prettier, TDD, A/B Testing
- **Other:** Agile/Scrum, Localization (i18n), Accessibility, Performance Optimization, Cross-platform development

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led full-stack development for a cross-market SaaS tool serving over 200K monthly active users, using Node.js (NestJS) and React with PostgreSQL and MongoDB in hybrid data environments.
- Architected and implemented modular, scalable backend services in NestJS, achieving over 45% reduction in coupling and enabling easier onboarding for new features.

- Oversaw CI/CD workflows using GitHub Actions and Dockerized pipelines, reducing deployment times by 60% and enhancing rollback reliability for B2C product launches.
- Mentored 5+ junior/mid-level developers on best practices, resulting in 100% improvement in pull request acceptance rate within 3 months.
- Delivered multiple new modules post-MVP, including subscription management, payment integrations, and notification systems using WebSockets.
- Collaborated with UX/UI teams and PMs in sprint planning sessions, using Agile Scrum to ensure sprint deliverables aligned with customer KPIs.
- Introduced performance monitoring with custom logs and tracing, decreasing API response latency by up to 35% across multiple endpoints.
- Implemented localization strategies using react-i18next and NestJS internationalization tools to support 6 languages, enabling market expansion into 3 new countries.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built and scaled several internal and public-facing Node.js microservices serving B2C marketing platforms with multi-region reach and MongoDB backends.
- Developed a headless CMS-based React.js UI system, enabling marketers to configure campaigns with drag-and-drop components using reusable design systems.
- Collaborated in cross-functional pods with designers and analysts to A/B test new features, increasing customer engagement by 22% through iterative feedback.
- Integrated complex third-party APIs such as Facebook Graph, Twilio, and Google Ads with seamless token refresh, caching, and error recovery mechanisms.
- Wrote modular data ingestion pipelines using cron-based Node.js workers and queues for tracking engagement metrics from millions of campaign users.
- Streamlined CI/CD process using GitLab CI with multi-stage build pipelines, reducing production hotfix deployment time by 40%.
- Led internal workshops on using PostgreSQL indexes and schema optimization, directly contributing to 3x query performance improvement.
- Implemented advanced role-based access control using JWTs and refresh tokens across client dashboards, improving security audit outcomes by 100%.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Delivered end-to-end B2C platform using Express.js and Angular with PostgreSQL for subscription analytics and payment insights dashboard.
- Designed RESTful APIs serving mobile and desktop clients using OpenAPI specs, reducing integration delays with mobile teams by 70%.
- Built reusable UI components in Angular and transitioned to React mid-cycle to support richer dynamic behavior and greater performance.
- Worked closely with QA engineers to implement Cypress and Mocha testing suites, leading to 85% test coverage on key modules.
- Introduced Docker to standardize dev environments and collaborated with DevOps team to build test/staging environments on AWS EC2.
- Created data migration tools for legacy systems using Node.js scripts and custom ETL flows, reducing manual data QA by 40%.

- Refactored old monolithic code into services and libraries with shared interfaces and contracts for better team collaboration.
- Supported localization efforts with language pack loaders and culture-aware formatting across date, currency, and number inputs.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed components for a web-based task management SaaS app, implementing core features using React.js and RESTful backend APIs.
- Maintained secure user authentication and session handling using JWTs and cookie-based auth flows in both frontend and backend.
- Built admin dashboards for internal operations using D3.js visualizations to analyze customer behavior across different cohorts.
- Improved runtime performance of legacy modules by 30% by applying memoization and optimizing React rendering cycles.
- Enhanced UI accessibility across the platform to conform with WCAG standards, improving usability scores in internal UX audits.
- Documented all new APIs using Swagger and contributed to a Postman collection shared across the dev team.
- Collaborated with design and frontend leads to implement a dynamic theming engine supporting user-based color profiles.
- Used GitHub Projects and integrated issue tracking with Slack bots to improve developer velocity and transparency.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Created internal admin tools for user management and analytics using React.js and Node.js with PostgreSQL.
- Developed dynamic charts using Chart.js for customer dashboards, rendering real-time updates via WebSocket integration.
- Built secure login/register flows with password hashing and token-based authentication.
- Implemented user activity logging services to help the team track feature adoption and discover pain points.
- Automated testing using Jest and built CLI scripts to assist with local database seeding and test resets.
- Supported a migration from local MongoDB to PostgreSQL to better support joins and reporting queries.
- Wrote internal documentation for onboarding future interns and contributed to architecture diagrams using Lucidchart.
- Participated in daily scrums and sprint retrospectives, collaborating closely with product and design teams.

EDUCATION

Tallinn University

CERTIFICATIONS

- ❖ Node.js Microservices: Breaking a Monolith to Microservices – Udemy
 - ❖ Advanced TypeScript Patterns – Pluralsight
 - ❖ Architecting Scalable Web Applications with NestJS – Coursera
 - ❖ PostgreSQL Query Optimization & Indexing – LinkedIn Learning
 - ❖ Docker and Kubernetes: The Complete Guide – Udemy
 - ❖ Agile Scrum Master (ICP-SM Certified) – ICAgile
-

PROJECTS

SaaS User Analytics Suite (Sensidev)

Built from MVP to growth stage, used NestJS backend, React.js frontend, PostgreSQL, MongoDB for hybrid data support, and real-time reporting through WebSockets. Led backend design, deployed microservices, and managed production release cycles.

Marketing Automation Platform (Syscom Digital)

Developed dynamic rule-based campaign logic in Node.js, React dashboards with Redux for visual builder interfaces, and implemented A/B testing for product experiments.

Subscription Dashboard (Soft Build)

Built a modular dashboard for analyzing churn, revenue growth, and conversion rates. Utilized React, PostgreSQL, and Stripe API with JWT authentication.
