

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-866410383/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Senior Backend Engineer with over 9 years of experience designing and implementing scalable backend architectures for high-traffic applications. Proven expertise in TypeScript, Node.js, GraphQL, and cloud platforms such as AWS. Demonstrated leadership in end-to-end system development, CI/CD automation, and backend optimization for multimedia and real-time content services. Adept in Agile development, cross-functional team collaboration, and DevOps practices with a focus on performance, security, and reliability.

TECHNICAL SKILLS

- Languages:** TypeScript, JavaScript (ES6+), SQL, Bash
- Frameworks:** Node.js, Express.js, GraphQL, REST API, NestJS
- DevOps & Infrastructure:** AWS (EC2, Lambda, S3, CloudWatch), Docker, Terraform, GitHub Actions, CI/CD, Kubernetes
- Databases:** PostgreSQL, MongoDB, MySQL, Redis
- Tools:** Git, JIRA, Postman, Prometheus, Grafana, Elastic Stack
- Practices:** TDD, BDD, Agile/Scrum, Microservices, Event-driven architecture

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and deployed scalable backend services for digital audio streaming systems using Node.js and GraphQL to support real-time content delivery for over 5M users.
- Led end-to-end development of backend modules handling publishing workflows, audio indexing, and metadata retrieval using AWS services (Lambda, S3, RDS).
- Spearheaded CI/CD pipeline optimization with GitHub Actions and Terraform, reducing deployment time by 45% and improving reliability during feature rollouts.
- Collaborated closely with mobile and frontend teams across EU/US time zones, aligning backend APIs with product roadmaps and UX goals.
- Implemented robust monitoring using Prometheus and Grafana, leading to 30% quicker detection and resolution of system anomalies.
- Refactored legacy modules to microservices, resulting in improved maintainability and 50% faster testing and release cycles.
- Took active part in an on-call rotation ensuring sub-1h resolution time for audio service disruptions, contributing to 99.98% service uptime.

- Mentored junior engineers in backend architecture, DevOps best practices, and clean code principles across distributed teams.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed backend solutions for interactive media campaigns integrating user-generated audio/video content using Node.js and RESTful APIs.
- Built GraphQL endpoints for client-facing data portals enabling real-time analytics for marketing teams and reducing data query latency by 40%.
- Integrated AWS services such as CloudFront and S3 to manage dynamic asset delivery for audio/visual campaigns.
- Automated deployment using Docker and GitLab CI/CD pipelines ensuring consistent delivery of microservices across staging and production environments.
- Worked in a cross-functional Agile team to deliver custom audio modules within tight client deadlines, improving campaign engagement metrics.
- Optimized PostgreSQL queries and indexing strategies leading to 70% faster report generation for campaign data.
- Collaborated with QA team to build integration and unit test coverage using Jest and Mocha, boosting code quality confidence.
- Contributed to DevOps documentation and architecture diagrams to support operational transparency and onboarding.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Engineered backend modules for B2B applications with a focus on scalable REST APIs and secure authentication using OAuth2/JWT.
- Contributed to the migration from monolith to microservices using Node.js and message queues, enhancing service isolation and deployment control.
- Integrated third-party audio processing APIs and cloud storage providers for multimedia applications.
- Developed CLI-based dev tooling to standardize local testing and reduce ramp-up time for new engineers.
- Wrote and maintained backend documentation, ensuring clarity on API contracts and service responsibilities.
- Refactored key modules to align with SOLID principles, reducing bug rates and maintenance overhead.
- Participated in sprint planning, code reviews, and pair programming to elevate team standards.
- Provided after-hours support during key client deployment windows, ensuring smooth feature launches.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Contributed to backend development of a real-time media management dashboard using Node.js and WebSockets.

- Implemented data syncing features across distributed clients with focus on performance under concurrent loads.
- Supported integration with custom audio metadata services via REST APIs for large-scale media libraries.
- Created internal scripts to automate audio file uploads and tagging pipelines.
- Worked under Agile methodologies using daily standups and sprint reviews for efficient project tracking.
- Applied performance profiling and memory leak detection to production services under stress testing.
- Documented technical procedures for audio media ingestion and asset mapping.
- Assisted QA team with test plan creation and automation of API testing scenarios.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Built proof-of-concept audio scheduling tool as part of a broadcast automation backend using JavaScript and Node.js.
- Participated in API design sessions and provided implementation support for MVP backend endpoints.
- Assisted in creating S3-integrated file upload logic and basic metadata tagging.
- Developed utility scripts to track file transfer logs and diagnose sync issues across environments.
- Maintained and enhanced internal Node.js libraries used across multiple projects.
- Worked with senior engineers to optimize data models for audio asset cataloging.
- Wrote unit tests to improve test coverage on helper utilities used in CI.
- Attended code walkthroughs and applied feedback to align with software engineering standards.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate (2023)
- ❖ Node.js Services Development – OpenJS Foundation (2022)
- ❖ Terraform for DevOps Engineers – HashiCorp Certified (2023)
- ❖ Advanced GraphQL – Apollo GraphQL Academy (2024)

PROJECTS

✓ AudioSync API Suite (2023 – Present)

- Designed a suite of GraphQL APIs for syncing audio content metadata across distributed platforms with real-time updates and AWS Lambda integration.

✓ **OnAir DevOps Toolkit (2022 – 2023)**

- Built internal CLI tool to streamline deployment and rollback for Node.js services, including blue/green deployment strategies and Terraform modules.

✓ **Podcast Playback Engine (2021 – 2022)**

- Led backend logic and API development for high-traffic podcast playback platform with adaptive streaming, fallback caching, and S3 lifecycle policies.
