

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Backend-focused Senior Software Engineer with 9+ years of experience designing and delivering scalable SaaS applications, enterprise integrations, and data-driven systems. Skilled in building robust backend services with **Node.js, TypeScript, PostgreSQL, and SQL/NoSQL**, with expertise in data modelling, query optimization, and large-scale system integrations. Adept at **ERP/WMS integrations, API development, and enterprise-grade features** such as authentication, RBAC, and audit logging. Proven track record of collaborating with CTOs, product leaders, and engineering teams to deliver **high-impact SaaS modules**. Strong communicator with experience in **remote-first teams**, eager to grow into leadership roles such as **Tech Lead** or **Head of Engineering**.

TECHNICAL SKILLS

- **Languages & Frameworks:** Node.js, TypeScript, JavaScript (ES6+), Python, PHP, C#
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, SQL Server (SQL + NoSQL expertise)
- **Data & Integration Tools:** dbt, Kafka, RabbitMQ, REST APIs, GraphQL, ERP/WMS integrations
- **Cloud Platforms:** AWS (Lambda, RDS, S3, ECS), GCP (Cloud Run, BigQuery, Pub/Sub), Azure
- **DevOps & CI/CD:** Docker, Kubernetes, Terraform, Jenkins, GitLab CI/CD, GitHub Actions
- **Other:** Authentication & RBAC, API Versioning, Audit Logging, Performance Optimization, SaaS Architecture

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented high-performance backend services using **Node.js (TypeScript)** and PostgreSQL, optimizing queries and indexes to handle millions of records with sub-second response times.
- Delivered integrations with ERP and WMS systems, building **resilient pipelines** with retries, idempotency, and schema versioning to ensure reliable and fault-tolerant data ingestion.
- Collaborated directly with the CTO to architect a **Data Integration module**, transforming raw operational data into structured models using SQL and dbt for seamless forecasting.
- Implemented **enterprise-grade features** such as multi-tenant authentication, role-based access control (RBAC), audit logging, and API versioning to meet enterprise client needs.
- Optimized PostgreSQL queries by refactoring joins, indexing, and caching strategies, resulting in a **40% performance improvement** for large data retrieval operations.

- Built **scalable APIs and data pipelines** integrating with third-party SaaS products, ensuring high reliability and extensibility across multiple environments.
- Actively participated in sprint planning, code reviews, and mentoring of junior developers, fostering best practices in **clean architecture, testing, and CI/CD workflows**.
- Collaborated cross-functionally with product managers and engineers to deliver new SaaS modules, ensuring alignment between **business goals and technical implementation**.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed backend systems with **Node.js and PostgreSQL**, supporting marketing automation platforms that processed large volumes of customer engagement data.
- Created integration pipelines with CRM and ERP systems, ensuring data synchronization through **reliable retry mechanisms and schema evolution strategies**.
- Enhanced platform security by implementing **OAuth2 authentication, JWT-based sessions, and granular access permissions** for enterprise clients.
- Optimized SQL queries and indexing strategies, enabling high-frequency data ingestion while maintaining **system availability above 99.9% uptime SLA**.
- Migrated legacy PHP services into **cloud-native Node.js microservices**, improving scalability and reducing infrastructure costs by 25%.
- Contributed to building real-time analytics dashboards using **PostgreSQL + Redis caching**, improving system responsiveness for data-heavy reports.
- Delivered APIs with versioning and backward compatibility, ensuring seamless integration for multiple clients without disruption.
- Worked closely with delivery teams and stakeholders to define backend roadmaps, balancing **feature velocity and long-term technical health**.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built custom ERP modules and **data-driven backend systems** using Node.js, MySQL, and MongoDB for clients in manufacturing and logistics.
- Designed schemas and queries for relational and NoSQL databases, ensuring scalability and reliability in **hybrid SQL/NoSQL environments**.
- Developed integration services to connect with external APIs, handling data ingestion pipelines with **robust error handling and retries**.
- Implemented **role-based authentication and audit trails** to ensure compliance with industry security and privacy requirements.
- Optimized queries and database access patterns, reducing load times by 30% and improving **system performance during peak traffic**.
- Migrated legacy systems from monoliths to modular microservices deployed on **AWS ECS with Docker and CI/CD pipelines**.
- Participated in the full SDLC from requirements gathering to deployment, ensuring close collaboration with clients and business teams.
- Trained junior developers and conducted code reviews to maintain high code quality and **industry-standard best practices**.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Contributed to backend services for digital commerce platforms, focusing on **data processing and system integrations**.
- Developed APIs in PHP and Node.js, integrating with payment gateways, CRM tools, and ERP systems to support enterprise commerce workflows.
- Modeled relational databases and optimized queries to support **high transaction throughput in e-commerce systems**.
- Enhanced platform reliability by implementing **error handling and retry strategies** for third-party integrations.
- Assisted in migrating infrastructure to **AWS cloud services**, improving scalability and reducing operational overhead.
- Contributed to frontend-backend integration by developing REST APIs consumed by Angular-based web applications.
- Implemented security features such as **input validation, access control, and encrypted data handling**.
- Supported QA teams in debugging and performance testing, ensuring production systems met **strict SLAs for uptime and performance**.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Gained hands-on experience building **backend services and data pipelines** using PHP, MySQL, and early exposure to Node.js.
- Supported ERP module integrations by developing data ingestion services, schema validations, and **report generation pipelines**.
- Assisted senior developers in building APIs and data models for multi-tenant SaaS applications.
- Wrote SQL queries and optimized stored procedures to ensure data retrieval efficiency and accuracy in customer reporting.
- Implemented authentication workflows and experimented with **early RBAC models** to enforce access controls.
- Learned version control best practices with Git, collaborating in a small team environment with code reviews and continuous integration.
- Participated in system testing, debugging, and documenting backend services for **knowledge transfer and onboarding**.
- Contributed to small proof-of-concept projects with early adoption of cloud services for application deployment.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
 - Google Cloud Professional Cloud Developer
 - PostgreSQL for Developers – Advanced Query Optimization
 - dbt Fundamentals
-

PROJECTS

- **Data Integration Module (2023)** – Designed and delivered a scalable backend module for ingesting, transforming, and visualizing operational data using **Node.js, TypeScript, PostgreSQL, and dbt**.
- **ERP & WMS Integration Pipelines (2022)** – Built resilient pipelines with retries, idempotency, and schema versioning to connect SaaS platforms with **ERP/WMS systems** in logistics.
- **Pricing Module Expansion (2021)** – Contributed to the development of a dynamic pricing engine in Node.js, enabling clients to optimize pricing strategies with **real-time data models**.
