

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Full Stack Engineer with 9+ years of experience building highly performant tools using React, Node.js, and TypeScript. Specialized in crafting scalable trading dashboards, real-time data visualizations, and robust backend APIs. Proven track record delivering seamless UI/UX, efficient systems design, and clean, well-tested code. Comfortable in fast-paced environments—especially fintech and trading contexts—leveraging modern stacks to ship features rapidly while maintaining top-tier code quality.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL, HTML, CSS
- **Frontend:** React, Next.js, Tailwind CSS, Redux, jQuery
- **Backend:** Node.js, FastAPI, Express.js
- **Databases:** PostgreSQL, MongoDB, MySQL
- **DevOps:** Docker, GitHub Actions, CI/CD Pipelines
- **Testing:** Jest, React Testing Library, Pytest, TDD
- **Cloud & Hosting:** Vercel, Heroku, DigitalOcean
- **Other Tools:** Git, Postman, Figma, Zeplin, JIRA, Storybook
- **Special Focus:** Real-time trading interfaces, system design, UI performance, crypto/HFT integration

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Developed interactive trading dashboards using React + Tailwind CSS, streaming data updates using WebSockets and integrating backend APIs in real-time.
- Built high-performance Node.js APIs for market analysis and transaction tracking, reducing response latency under high user concurrency.
- Refactored existing systems to TypeScript with strict typing and modular architecture, improving code safety and maintainability.
- Designed and deployed real-time data visualization tools using D3.js for price trend analytics, trading volumes, and historical overlays.
- Led frontend architecture redesign for internal systems, improving time-to-interaction by 40% and decreasing load failures.
- Collaborated on integrating third-party crypto exchange APIs (Binance, Coinbase) to support automated syncing and reconciliation tools.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Built configuration UIs in React for internal systems used by marketing teams, enabling dynamic rule creation for campaign logic.
- Designed ETL pipelines in Node.js to normalize trade data from decentralized sources and load into PostgreSQL for KPI tracking.
- Integrated OAuth2 login and granular permissions into custom admin panels for crypto campaign management.
- Automated real-time dashboards with React and WebSocket subscriptions to monitor campaign metrics and system health.
- Refactored legacy components to TypeScript, reducing runtime bugs and improving component-level isolation.
- Used Docker and GitHub Actions to ship staging environments on every pull request for rapid QA feedback cycles.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Built internal tools for tracking employee financials and trading bonuses, using PostgreSQL and Python for aggregation logic.
- Created responsive UI components with React for managing real-time trading desk operations and data feeds.
- Participated in performance audits of internal systems, leading to refactoring critical backend services and reducing query time by 50%.
- Deployed microservices with Docker and Nginx in a production environment, ensuring fault-tolerance and rollback capabilities.
- Conducted code reviews and mentored junior developers on frontend state management and API contracts.
- Built internal dashboards with real-time logs and system metrics for management visibility during trading hours.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Developed monitoring scripts for crypto wallet activity using Python and PostgreSQL, facilitating fraud detection analytics.
- Created alert dashboards in React for real-time visibility into wallet transactions and threshold breaches.
- Wrote Node.js middleware to route and sanitize incoming webhooks from crypto payment platforms.
- Implemented retry logic and fallback queues for volatile third-party APIs using BullMQ and Redis.
- Assisted in containerizing services using Docker for streamlined team onboarding and local development parity.
- Contributed to frontend updates using vanilla JavaScript within restrictive templating systems.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Built Node.js-based account services API, integrating user metadata across systems during early trading product prototyping.
 - Assisted with prototyping internal dashboards using React and Chart.js to visualize dummy trading data.
 - Automated CSV import and transformation logic for early ledger systems using Node.js streams and fast-csv.
 - Supported unit test creation and mocking strategies for API testing with Jest.
 - Explored usage of Socket.IO for real-time chat and alerts feature in trade-facing dashboards.
 - Learned team workflows, sprint planning, and agile delivery in a professional engineering setting.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Node.js – The Complete Guide (Udemy)**
 - ❖ **TypeScript: Deep Dive (Pluralsight)**
 - ❖ **System Design Primer (Educative.io)**
 - ❖ **Crypto Trading and Markets 101 (Coursera)**
 - ❖ **Docker for Developers – Udemy**
-

PROJECTS

- ✓ **Crypto Trade Visualizer**
React + WebSockets dashboard showing real-time trades, price movements, and order books. Node.js backend feeds live data from exchange APIs.
- ✓ **Trading Strategy Configurator**
Web-based interface for managing trading bot settings (thresholds, time intervals, stop-loss), synced via RESTful API to execution engine.
- ✓ **API Rate-Limiter Microservice**
Built with Node.js and Redis to throttle exchange API calls during trading spikes; integrated into all outbound HTTP traffic via middleware.
