

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Backend Engineer with over 9 years of experience designing, building, and maintaining scalable backend systems. Adept in system design, microservices architecture, supplier integrations, and platform reliability. Strong expertise in Node.js and Python (FastAPI), combined with hands-on experience across PostgreSQL, MongoDB, Redis, Docker, Kubernetes, and AWS. Proven ability to lead backend engineering teams, deliver high-availability systems, and shape backend architectures in fast-paced, data-driven environments.

➤ TECHNICAL SKILLS

- **Languages:** Node.js, Python (FastAPI), TypeScript, JavaScript, Shell Script
- **Backend:** REST API, GraphQL, Microservices, Adapter Patterns, gRPC
- **Databases:** PostgreSQL, MongoDB, Redis, MySQL
- **Messaging & Queues:** Kafka, RabbitMQ
- **Cloud & DevOps:** Docker, Kubernetes, AWS (ECS, Lambda, S3, CloudWatch), CI/CD, GitHub Actions, Jenkins
- **Monitoring & Observability:** Prometheus, Grafana, Sentry, Loki
- **Testing:** Unit, Integration, Load Testing, Postman, Pytest, Jest
- **Tools & Platforms:** Git, Bitbucket, Jira, Confluence, Swagger, OpenAPI
- **Other:** Domain-Driven Design (DDD), SDK Development, Feature Flags, Blue-Green Deployment, Event Sourcing

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led technical integration of hotel and activity suppliers using adapter pattern and abstracted third-party APIs to standardize pricing, booking, and availability workflows for a global travel platform.
- Architected and deployed microservices to support multi-supplier data syncs with reliability layers like retry queues and rate-limiting using RabbitMQ and Redis caching.
- Designed PostgreSQL schemas for normalized booking records and optimized index strategies to reduce API response latency by over 40% in high-traffic environments.
- Implemented and managed Prometheus + Grafana dashboards for performance metrics and Sentry-based observability to meet SLO/SLAs across the backend.

- Led feature deployments via GitHub Actions with blue-green deployment and rollback support; maintained full staging-prod parity with Docker + Kubernetes.
- Mentored junior developers in system design, test coverage best practices, and asynchronous processing via message queues.
- Conducted technical reviews and roadmap planning, aligning backend sprints with cross-functional delivery goals and timelines.
- Built internal SDKs and APIs for partner integration, reducing onboarding time for new suppliers by 60%.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed and maintained backend microservices for campaign management systems using Node.js and MongoDB, serving real-time user engagement data.
- Integrated multiple external service APIs with fallback logic and internal error tracking to preserve SLA commitments during external outages.
- Refactored legacy monolith modules into event-driven services with Redis caching and pub/sub-based communication for asynchronous flows.
- Collaborated with product and analytics teams to design efficient RESTful endpoints for performance dashboards with usage logs and trends.
- Created test automation suite (unit + integration) increasing release confidence and reducing regression bugs by 80%.
- Built feature flag system to toggle experimental APIs without risking production stability.
- Contributed to GitOps-based CI/CD with build matrix, auto-rollbacks, and secret rotation strategies using AWS and Jenkins pipelines.
- Participated in domain modeling and API design workshops to enforce consistency across REST/GraphQL interfaces.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Designed backend services supporting booking workflows and cancellation logic for local and regional accommodation suppliers.
- Developed custom ETL tools to normalize external APIs into internal data formats, enriching with currency conversion and availability rules.
- Created an internal developer portal with auto-generated Swagger/OpenAPI documentation for integrations.
- Engineered a Redis-based caching layer for availability lookups with TTL-based invalidation for live rate data.
- Deployed containerized services to AWS using ECS and configured monitoring alerts via CloudWatch metrics.
- Helped migrate booking logs and transaction records from MySQL to PostgreSQL with full audit compliance.
- Collaborated with frontend teams to design API responses optimized for mobile-first booking apps.
- Contributed to weekly sprint demos, stakeholder planning, and technical debt clean-up projects.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Built and documented backend modules in Node.js for price aggregation from regional suppliers with retry and alerting logic.
- Integrated Redis for temporary storage of rate and availability snapshots.
- Developed webhook-based notification systems to detect and alert booking errors in real-time.
- Contributed to CI pipeline automation and Dockerization of legacy services for improved development parity.
- Refined core booking logic to support promo code workflows and multi-rate negotiation logic with vendors.
- Participated in code reviews and pair programming sessions to enforce modular design principles.
- Wrote integration tests and load scenarios for high-concurrency endpoints.
- Assisted QA with environment setup and release smoke test scripting.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Developed internal API adapters to bridge supplier booking systems to a central marketplace.
- Learned and implemented caching techniques using Redis and query optimization for PostgreSQL.
- Created cron jobs to monitor supplier sync failures and log metrics.
- Designed POC for fallback booking mechanisms using retry queues.
- Contributed to legacy PHP to Node.js migration effort with test-first refactoring.
- Created interactive internal dashboards for operational insights and sync health monitoring.
- Documented code flows and architecture diagrams for new team onboarding.
- Presented monthly progress updates and demoed new modules in team showcases.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Developer – Associate
 - MongoDB for Node.js Developers – MongoDB University
 - Redis Data Structures & Performance Patterns – Udemy
 - Designing Microservices – O'Reilly
 - Scalable Systems Design – Coursera (Stanford Online)
-

PROJECTS

- ✓ **Global Booking Adapter Hub**
Led the development of an adapter system that unified 20+ external travel supplier APIs into a normalized schema with fallback and circuit-breaker logic. Reduced supplier onboarding time from weeks to days.
- ✓ **Booking Observability Suite**
Built a centralized monitoring and alerting platform using Prometheus, Grafana, Loki, and Sentry to track booking failures, latency spikes, and SLA breaches in real-time.
- ✓ **Dynamic Rate Sync Engine**
Designed and deployed a scalable engine that polls external supplier rates, applies transformation rules, and stores price snapshots in Redis and PostgreSQL with intelligent cache invalidation.
