

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with 9+ years of full-stack experience delivering scalable backend systems, distributed search solutions, and event-driven architectures. Specialized in PHP, Golang, Elasticsearch, RabbitMQ, and microservices. Proven ability to design and optimize high-performance APIs and indexing pipelines for e-commerce platforms. Adept in CI/CD, containerization (Docker/Kubernetes), and cloud platforms (AWS, GCP). Passionate about improving search accuracy, system stability, and developer efficiency.

TECHNICAL SKILLS

- **Languages:** PHP, Golang, Python, JavaScript, Bash
- **Search:** Elasticsearch, Kibana, Logstash
- **Messaging & Queues:** RabbitMQ, Kafka, Redis
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis (SQL & NoSQL)
- **Cloud:** AWS (Lambda, EC2, S3, RDS), GCP (Cloud Functions, Firestore)
- **DevOps:** Docker, Kubernetes, GitHub Actions, GitLab CI/CD
- **Tools:** Git, Jira, Grafana, Prometheus, Sentry, Swagger
- **Other:** REST, gRPC, Microservices, Terraform, FastAPI, Laravel, Odoo

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Architected and maintained a scalable search pipeline using Elasticsearch and RabbitMQ, significantly improving search relevance across high-traffic product catalogs.
- Led the transition from monolithic PHP architecture to microservices-based Golang services for distributed indexing and product syncing.
- Designed a custom Elastic index strategy to support multiple languages and faceted filtering, enhancing global e-commerce platform compatibility.
- Developed a real-time search sync service leveraging Redis pub/sub and message queues, reducing indexing delay by over 60%.
- Integrated performance dashboards with Kibana and Grafana to track indexing latency and search query responsiveness.
- Optimized Elasticsearch scoring logic using custom analyzers and relevance tuning, boosting top-result accuracy by 25%.

- Mentored junior developers on implementing scalable event-driven microservices with Go and PHP in cloud-native environments.
- Implemented monitoring hooks with Prometheus to ensure 24/7 availability and observability for search-related services.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Engineered a robust product discovery experience using Elasticsearch and Redis, supporting multi-tenant e-commerce storefronts.
- Built backend search APIs in PHP and transitioned critical modules to Go, reducing latency and improving concurrency handling.
- Integrated AWS S3 and RDS to support distributed assets and structured data with optimized cache warm-up routines.
- Orchestrated containerized deployments via Docker and Kubernetes with CI/CD pipelines through GitHub Actions and Terraform.
- Collaborated with UX and product teams to enhance autocomplete and faceted search, improving conversion rates on mobile.
- Designed failover queues in RabbitMQ to ensure lossless indexing jobs during peak sale events and unexpected downtimes.
- Automated log tracing and error alerting with ELK stack and custom Lambda scripts, reducing manual debugging effort by 40%.
- Coordinated search experimentation using A/B tests to validate scoring models and filter impact across product pages.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed advanced indexing workflows for e-commerce SKUs using Golang workers and PostgreSQL triggers for consistency.
- Built a distributed search results caching layer with Redis and content hashing, cutting repeated search latency by 70%.
- Designed a search audit system to track query performance and identify low-performing keywords using aggregated metrics.
- Maintained multilingual search support via Elastic's custom analyzers and synonym filters, improving global search UX.
- Assisted in refactoring monolithic search logic to modular APIs, following REST best practices and versioning strategies.
- Developed data migration utilities for Elastic mappings and schema changes with zero-downtime strategies.
- Set up CI pipelines to automate test execution, Docker builds, and deployment of new index versions in staging and production.
- Led sprint ceremonies focusing on delivering search reliability features and optimizing request throughput.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Collaborated in the rapid development of a real-time product listing platform using PHP and MySQL.
- Integrated full-text search with basic stemming logic to support product discovery across localized marketplaces.
- Contributed to the enhancement of backend services via RESTful APIs for inventory lookup and tag-based filtering.
- Worked on scalability improvements for APIs using Nginx caching and asynchronous job queues.
- Supported QA team by automating test scripts for search endpoints using Postman and JMeter.
- Implemented Redis-backed caching to store popular queries and trending results, enhancing user retention.
- Participated in elastic cluster monitoring and routine log analysis with Logstash and Kibana.
- Documented technical design choices in Confluence and participated in peer review sessions.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Developed internal tools to monitor search response time across staging and production environments.
- Contributed to building a keyword suggestion module integrated with Elastic query logs for relevance tuning.
- Assisted in managing job queues for image and metadata indexing using RabbitMQ.
- Wrote batch scripts for regular Elastic index rehydration and alias rotation across environments.
- Created performance dashboards to display query volume, average latency, and error ratios.
- Collaborated with senior engineers to deploy API enhancements supporting product filtering and search facets.
- Updated backend validation logic to reduce bad indexing payloads from upstream systems.
- Performed exploratory QA testing for Elastic-based filtering and sorting mechanisms.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Elastic Certified Engineer** – Elastic.co
- ❖ **AWS Certified Developer – Associate**
- ❖ **Google Cloud Associate Cloud Engineer**
- ❖ **RabbitMQ for Developers** – CloudAMQP
- ❖ **Advanced Go Programming** – Educative
- ❖ **Distributed Systems with Go** – Udemy

PROJECTS

- ✓ **High-Volume Multi-Tenant Search System**
Designed and implemented an e-commerce search infrastructure using Elastic, RabbitMQ, and Go microservices. Supported millions of products across clients, with dynamic filtering, relevance tuning, and Redis-based query caching.
- ✓ **Distributed Event Indexer for Product Sync**
Built a scalable Golang-based event indexer consuming events from RabbitMQ to maintain Elastic index consistency. Added auto-healing retries, duplicate prevention, and monitored indexing lag in real-time dashboards.
- ✓ **CI/CD-Powered Elastic Migration System**
Created a GitHub Actions-based CI/CD pipeline for safely deploying Elastic index changes, including mappings, analyzers, and scripted scoring updates, ensuring zero-downtime transitions in production environments.
