

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced full-stack developer with 8+ years in architecting and developing high-performance backend systems and modern web applications. Specialized in PHP, Node.js, and cloud-native solutions including AWS Lambda and ECS. Proven track record of implementing scalable microservices, optimizing performance for millions of API requests, and leading projects in fast-paced startup environments. Committed to clean code, continuous delivery, and delivering impactful software solutions.

TECHNICAL SKILLS

- **Languages & Frameworks:** PHP, Node.js, TypeScript, JavaScript, React, Tailwind CSS
- **Backend & Infrastructure:** AWS Lambda, ECS, Docker, Microservices Architecture
- **Databases:** MySQL, DynamoDB, PostgreSQL
- **Caching & Messaging:** Redis, RabbitMQ, AWS EventBridge
- **APIs:** RESTful APIs, GraphQL
- **CI/CD & Tools:** GitHub Actions, Jenkins, PHPUnit, Cypress, Jest
- **Others:** Agile/Scrum, Git, Linux, Jira, GitHub Copilot

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led the modernization of a legacy monolith into AWS Lambda-based microservices, improving deployment speed and system reliability for high-volume traffic handling.
- Designed and implemented scalable APIs using Node.js and PHP, supporting over 10 million monthly requests while maintaining low-latency performance benchmarks.
- Re-architected backend services to integrate seamlessly with AWS EventBridge and RabbitMQ, enabling real-time processing and decoupled communication across services.
- Spearheaded transition to containerized environments using Docker and deployed via AWS ECS, achieving consistent build and runtime environments for development and production.
- Integrated DynamoDB with caching strategies using Redis, boosting read efficiency by 45% for high-demand product catalog data.

- Collaborated cross-functionally to migrate frontend modules to React with TypeScript and Tailwind CSS, enhancing UI responsiveness and developer velocity.
- Championed test automation using Cypress and Jest for frontend, and PHPUnit for backend services, increasing code coverage to over 90%.
- Mentored junior developers in cloud architecture best practices and supported code reviews, resulting in increased code quality and delivery speed.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed backend APIs in PHP and Node.js for e-commerce analytics and customer engagement platforms, improving data pipeline throughput by 3x.
- Created microservices architecture on AWS using Lambda and SQS to process data events asynchronously, reducing bottlenecks in peak traffic periods.
- Implemented GraphQL endpoints to simplify data queries across multiple frontends and reduce over-fetching issues encountered with REST APIs.
- Configured CI/CD pipelines using GitHub Actions, automating test, build, and deployment workflows and reducing manual errors by 80%.
- Devised caching strategies with Redis and load balancing configurations, enabling 99.99% uptime for customer-facing systems.
- Refactored legacy codebases using design patterns and SOLID principles, decreasing technical debt and onboarding time for new team members.
- Integrated third-party logistics and CRM APIs to support complex shipping and fulfillment processes for retail clients.
- Contributed to migration from MySQL to a hybrid database approach including DynamoDB, enhancing flexibility in product management systems.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed end-to-end web solutions using PHP and JavaScript for SaaS products in the logistics and shipping domains.
- Built scalable MySQL-backed APIs for order and inventory management, supporting thousands of concurrent users globally.
- Created modular React components and custom UI libraries using Tailwind CSS, facilitating design consistency across applications.
- Designed messaging systems using RabbitMQ for asynchronous job processing, reducing backend processing delays during import/export operations.

- Integrated payment gateways and third-party APIs into the main application flow, ensuring seamless transaction handling and error management.
- Conducted A/B testing and performance profiling to continuously optimize frontend and backend modules.
- Participated in regular sprint planning, retrospectives, and release deployments in an Agile environment.
- Led efforts in automated testing setup, achieving 85% backend test coverage with PHPUnit.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Delivered core modules for a logistics application using PHP and MySQL, focusing on real-time shipment tracking features.
- Developed REST APIs and backend tools for managing shipment status, label generation, and carrier integration.
- Refactored existing legacy code to adopt MVC architecture, resulting in clearer structure and improved maintainability.
- Utilized Redis for temporary session and cache management, decreasing repetitive DB queries by 30%.
- Collaborated with DevOps to containerize applications with Docker for easier CI/CD pipeline integration.
- Participated in code reviews, knowledge sharing sessions, and cross-functional agile meetings.
- Built admin dashboards with custom analytics widgets, using Chart.js and vanilla JavaScript.
- Enhanced backend performance by optimizing SQL queries and restructuring database indexes.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in developing internal web-based tools and admin panels for order processing using PHP and MySQL.
- Designed UI layouts with basic CSS and JavaScript and worked on validating forms and managing user roles.
- Implemented CRUD operations for customer and shipment records, applying RESTful principles.
- Wrote unit tests and debugging scripts to assist senior developers in QA processes.
- Gained foundational exposure to Agile development and Git-based workflows.
- Optimized basic queries and improved application responsiveness for small data sets.

- Participated in sprint stand-ups and learned SDLC stages through hands-on involvement.
 - Supported database migrations and local testing environments setup under supervision.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
 - ❖ PHP Certification – Zend Certified Engineer (ZCE)
 - ❖ GraphQL for Backend Developers – LinkedIn Learning
 - ❖ GitHub Copilot Foundations – GitHub Learning Lab
-

PROJECTS

SmartShip Fulfillment System

- Engineered scalable fulfillment microservices using PHP and AWS Lambda to manage shipping label generation, carrier APIs, and order syncing.
- Designed and implemented message queuing with RabbitMQ and AWS EventBridge to decouple shipping modules and increase throughput.

Realtime Order Tracker

- Developed a React + Tailwind dashboard with real-time updates using GraphQL subscriptions and Redis pub/sub backend.
- Integrated with AWS DynamoDB for fast lookups and resilient offline sync.

InventorySync Cloud Engine

- Built a cloud-native Node.js backend to synchronize inventory across marketplaces (Amazon, Shopify, WooCommerce), using RESTful and GraphQL APIs.
- Leveraged AWS Lambda and ECS for compute scaling, MySQL + DynamoDB hybrid persistence, and automated monitoring via CloudWatch.
