

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile and results-driven Full Stack Developer with 8+ years of experience architecting and developing scalable web applications and backend services using PHP (Laravel), Vue.js, MySQL, and Docker. Proven ability to lead full-cycle software development, from ideation through deployment in distributed, Agile environments. Adept at crafting customer-centric solutions that enhance system performance, automation, and product usability. Recognized for a proactive mindset, continuous improvement, and technical versatility across cloud-native and containerized infrastructures.

TECHNICAL SKILLS

- **Languages:** PHP, TypeScript, JavaScript, Bash, HTML5, SCSS
- **Frameworks & Libraries:** Laravel, Quasar, Vue.js, jQuery
- **DevOps & Tools:** Docker, Kubernetes, Git, GitHub, GitLab CI/CD, Linux, NGINX
- **Database Technologies:** MySQL, PostgreSQL, Redis
- **Cloud & Hosting:** AWS (EC2, S3, RDS), DigitalOcean, Firebase
- **Other Tools:** REST APIs, Agile/Scrum, Jira, Trello, Postman, Swagger

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led the design and development of scalable backend microservices using Laravel and Dockerized environments, significantly improving deployment efficiency and product stability.
- Integrated third-party maritime APIs and built internal RESTful endpoints, reducing manual effort and enhancing real-time data sync for global clients.
- Architected frontend interfaces in Vue.js and Quasar, introducing responsive cross-platform dashboards to support navigation and shipping operations.
- Implemented Kubernetes-based deployments across cloud infrastructure, enhancing container orchestration and application resilience.
- Mentored junior engineers on full-stack development, code quality, and CI/CD best practices using GitLab pipelines and Docker.
- Collaborated with international clients to translate business requirements into actionable technical solutions that improved fleet safety and efficiency.
- Spearheaded system performance audits and optimized complex SQL queries in MySQL, reducing average response time by 42%.

- Worked in agile sprints, actively contributing to planning, standups, reviews, and retrospectives to ensure on-time, value-driven deliveries.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed a high-traffic PHP/Laravel backend platform for digital campaign orchestration, enabling marketing teams to launch global events seamlessly.
- Refactored monolithic applications into modular Vue.js components integrated with Laravel APIs to support real-time content updates.
- Implemented Git branching strategies and code review pipelines, improving deployment consistency and team collaboration.
- Migrated legacy PHP codebases to Laravel 8 and improved unit test coverage using PHPUnit and TDD practices.
- Built responsive, mobile-first dashboards using Quasar framework and TypeScript, aligning with UX/UI best practices.
- Designed custom Bash scripts to automate backup and deployment processes across Linux servers, improving operational reliability.
- Conducted performance profiling and caching optimizations using Redis, resulting in a 30% speed improvement for core services.
- Worked in a cross-functional team to troubleshoot issues across frontend, backend, and cloud infrastructure layers.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Contributed to the full-stack development of a logistics application using Laravel, Vue.js, and MySQL to automate shipment routing and delivery tracking.
- Developed Dockerized environments for local development and production-ready images, improving developer onboarding and release reproducibility.
- Utilized REST APIs to integrate with external CRMs and GPS data services, enhancing fleet management capabilities.
- Customized Laravel middleware and service providers to handle complex business logic and user authentication scenarios.
- Built admin dashboards using Vue.js and Quasar to enable role-based reporting and user management.
- Conducted daily Git commits and code reviews to maintain quality standards and ensure compliance with ISO development practices.
- Participated in Agile ceremonies and collaborated with QA engineers to define test strategies and bug reproduction steps.
- Wrote Linux bash scripts for scheduled maintenance and log rotation across staging and production servers.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Designed backend APIs in Laravel to support a multi-vendor e-commerce platform with modular plugins and vendor dashboards.
- Implemented Vue.js UI components to provide a seamless and responsive shopping experience for mobile and web users.
- Developed CI/CD integration with GitHub and Jenkins to support weekly code releases and rollback mechanisms.
- Worked closely with UI/UX designers and product managers to deliver enhancements aligned with client expectations.
- Tuned MySQL indexes and query structures for optimal performance under high user concurrency.
- Created technical documentation and API specs using Swagger for external partners.
- Researched containerization solutions and contributed to Docker adoption strategies across the team.
- Provided production support and applied security patches to PHP libraries.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in developing internal tools using PHP, HTML, and MySQL for process automation within the maritime compliance division.
- Participated in daily code stand-ups and learned Agile methodology through hands-on exposure.
- Built small-scale reporting tools with chart visualizations using Chart.js and backend support in Laravel.
- Contributed bug fixes to internal Laravel modules, improving data handling and validation logic.
- Collaborated on Docker adoption research and container testing for micro-app deployments.
- Created scripts for database import/export and supported manual data entry interface enhancements.
- Helped migrate legacy scripts to modern PHP standards and improved form validation logic across multiple modules.
- Shadowed senior developers and gained practical exposure to real-world full-stack application lifecycles.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Laravel Certification – Advanced Developer Track**, Laravel Certification Authority, 2023
- ❖ **Docker & Kubernetes: The Complete Guide**, Udemy, 2022
- ❖ **Vue.js and Quasar Mastery Course**, Vue Mastery, 2022
- ❖ **Git Version Control – Pro Level**, Coursera, 2021

PROJECTS

- ✓ **Maritime Fleet Management System**

Developed a modular platform in Laravel + Vue + Quasar to monitor, track, and analyze maritime fleet data in real time. Integrated RESTful APIs, Docker orchestration, and MySQL replication for global scale operations.

- ✓ **Campaign Orchestration Suite**

Full-stack platform built with Laravel and Vue for managing digital advertising campaigns. Introduced real-time reporting, responsive admin panels, and CI/CD workflows using GitLab CI and Docker.

- ✓ **E-commerce Multitenant Platform**

Designed an API-driven backend in Laravel supporting vendor-specific catalogs, payment gateways, and order processing. Integrated with Vue.js frontend and Kubernetes-based deployment.
