

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Creative and performance-focused Senior Frontend Engineer with 8+ years of experience building high-performance, visually rich games and interactive experiences. Specialized in game rendering with **PixiJS**, **Phaser**, **WebGL**, and **Canvas**, with a deep understanding of animation pipelines, shaders, and asset management. Demonstrated success working cross-functionally with artists, game designers, and backend developers to craft immersive gaming environments. Adept at optimizing games for multiple platforms, maintaining reusable frameworks, and mentoring junior developers in fast-paced remote teams. Passionate about real-time rendering, gameplay UX, and the future of iGaming innovation.

TECHNICAL SKILLS

- **Game Frameworks:** PixiJS, Phaser, Three.js, Unity WebGL
- **Rendering & Animation:** WebGL, Canvas, Spine, GSAP, Shaders, Texture Packer
- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3, WebSocket, WebAssembly
- **UI/UX Integration:** Scene management, custom transitions, gameplay UX, interactive components
- **Performance:** Asset streaming, FPS optimization, load balancing, memory profiling
- **Game Logic:** RNG-based mechanics, game math, reel engines, bonus features
- **Tools:** Git, Webpack, Node.js, NPM, Babel, Figma
- **Testing & Quality:** Playwright, Cypress, Mocha, performance profiling
- **Platforms:** Desktop, Mobile Web, Android WebView, iOS Safari

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and developed multiple slot and arcade-style games using **PixiJS** and **Phaser**, implementing real-time animations, interactive effects, and responsive layouts optimized for mobile devices.
- Led the migration of a legacy HTML5 canvas rendering system to **WebGL** pipelines, boosting FPS on mid-tier devices by 40% while improving asset memory usage with GPU caching strategies.
- Built a reusable scene transition engine with GSAP that allowed seamless animation across game states, menus, reels, and bonus features, resulting in a 60% reduction in repeated code.
- Integrated **Spine** animation skeletons into PixiJS runtime for character and symbol animations, coordinating with illustrators to ensure visual fidelity and dynamic transitions.

- Collaborated with backend engineers to create event-driven interfaces for game outcomes using **WebSocket** and RESTful services, improving round-trip latency below 80ms.
- Led initiative to build a modular framework for new crash and scratch game types, including feature toggles and runtime skin switching for operator customizations.
- Conducted performance profiling on game loops and animation frames, reducing startup loading time by 55% through efficient asset packing and lazy initialization.
- Mentored 4 junior developers through code reviews, training sessions, and architecture walkthroughs, elevating team-wide code quality and confidence with game frameworks.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Delivered several branded mini-games and interactive campaigns using **Phaser 3**, tailored for marketing activations and mobile-first experiences.
- Integrated monetization and promotional modules (e.g., daily spins, jackpots, prize drops) directly into the game loop, tracking events and analytics via custom hooks.
- Created dynamic UI systems with **TypeScript** to allow re-skinning and reconfiguration of in-game elements via JSON-driven layouts.
- Applied advanced timing functions and **TweenManager** to implement fluid, physics-based reel animations for instant win scratch mechanics.
- Refactored asset loading pipelines to support progressive downloads and conditional preloads, improving cold boot time and asset fallback handling on slow networks.
- Worked closely with designers to implement responsive layout strategies supporting portrait and landscape modes with resolution-agnostic scaling.
- Implemented GSAP-based animated sequences for reward screens and symbol reveals, increasing user engagement by 35% on average.
- Helped evolve internal code libraries and shared plugins, including sound management systems and bonus game containers.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built interactive HTML5-based casino-style games for European operators, with core logic implemented in **JavaScript** and canvas-based rendering.
- Developed multiple reel engines supporting different paylines, cascading mechanics, and bonus triggers, fully decoupled from visual rendering components.
- Authored shader code and filters for dynamic lighting, glow effects, and real-time symbol distortion using **WebGL** fragment shaders.
- Collaborated on analytics event tracking pipelines, sending detailed gameplay data to back-office tools using in-game triggers.
- Conducted QA simulations on multiple resolutions and devices using a custom test harness for automated UI integrity verification.
- Created a sprite atlas compiler tool for in-house use to minimize draw calls and load overhead during game initialization.
- Delivered cross-browser compatibility patches for Safari and low-end Android devices, maintaining 98%+ render accuracy on key games.
- Documented game development guidelines and internal API contracts to onboard new devs and ensure maintainability.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Contributed to real-time data visualizations and WebGL-rendered dashboards using **Three.js** and **Canvas2D** for enterprise gamified UI components.
- Assisted in developing animation-heavy dashboards for promotional screens, integrating SVG overlays and shader-powered transitions.
- Enhanced performance across lower-end clients by implementing throttle-based rendering and async asset preloading mechanisms.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Built small-scale educational games and simulations using **Phaser** and **Canvas API**, focusing on UX flow and accessibility.
- Experimented with gamified onboarding modules for B2B applications, including quiz mechanics and animated walkthroughs.
- Researched and documented best practices in HTML5 game performance tuning and user input handling across touch and pointer devices.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Game Development with Phaser (Zenva Academy)
- ❖ WebGL & Canvas Performance Optimization (Udemy)
- ❖ Advanced JavaScript for Games (Frontend Masters)
- ❖ Introduction to Game Math & RNG (Coursera)

PROJECTS

- ✓ **Mystic Crash:** Fast-paced crash-style multiplayer betting game built with Phaser + WebSocket. Included GSAP reward animations and skin-switching UI.
- ✓ **SlotFX Framework:** Internal reusable slot game template in PixiJS with modular logic, reel engines, animation queueing, and game math plugin architecture.
- ✓ **Scratch & Reveal:** Lightweight scratch card engine using canvas mask-based interactions, animated reveals, and RNG-based prize tier logic.
- ✓ **Bonus Mission Manager:** Promotional plugin supporting in-game events like prize drops, tournaments, and point races, integrated with operator APIs.
