

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Highly skilled Senior Software Engineer with 9+ years of experience designing, building, and scaling backend systems, APIs, and cloud-native applications. Specialized in **Python (FastAPI, Django, Flask)** with a proven record of delivering high-performance, secure, and reliable backend solutions in remote, cross-functional environments. Experienced in **AWS, GCP, and Azure cloud services, SQL and NoSQL databases**, and modern DevOps practices. Passionate about backend architecture, microservices, and exploring cutting-edge AI/LLM agent technologies to build intelligent and autonomous applications.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, FastAPI, Django, Flask, Node.js, TypeScript, Java, C#
- **Cloud Platforms:** AWS, GCP, Azure (Functions, App Services, Storage, IAM, VPC, ECS, Lambda)
- **Databases:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis, DynamoDB, Elasticsearch, Vector Databases
- **DevOps & Tools:** Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI/CD, Jenkins
- **Architectures:** Microservices, RESTful APIs, Event-driven Systems, Serverless Architectures
- **AI/ML & LLMs:** LangChain, LangGraph, OpenAI API, Hugging Face, PyTorch (basic experience)
- **Other Skills:** GraphQL, gRPC, WebSockets, System Integration, Data Modeling, API Security

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented scalable **FastAPI and Django REST backend services**, supporting high-traffic SaaS applications with strict performance and security requirements.
- Led backend integration of **external APIs and internal microservices**, ensuring seamless interoperability across distributed systems and reducing integration failures by 30%.
- Optimized complex **PostgreSQL and MongoDB queries**, achieving a 40% improvement in response times for analytics-heavy endpoints.
- Architected **Dockerized microservices** deployed to **AWS ECS and GCP Cloud Run**, enabling resilient, cost-efficient, and auto-scalable systems.
- Implemented **CI/CD pipelines** using GitLab CI/CD and GitHub Actions, reducing deployment time from hours to under 20 minutes.
- Collaborated with frontend engineers on API-first development, ensuring React and Angular applications consumed **consistent, versioned APIs**.

- Enhanced system observability by integrating **Prometheus, Grafana, and ELK stack**, reducing incident response time by 25%.
- Mentored junior developers in **Python best practices**, REST API security, and containerization workflows, raising overall team performance and code quality.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Built and maintained **Flask-based backend services** powering real-time marketing automation platforms used by enterprise clients.
- Integrated third-party APIs such as **payment gateways, social media platforms, and analytics tools**, ensuring reliable and secure data synchronization.
- Migrated legacy systems from on-premise to **AWS cloud infrastructure**, improving uptime and reducing operational costs by 20%.
- Designed **MongoDB schemas and Redis caching strategies** that accelerated response times for high-frequency API requests.
- Automated CI/CD workflows with Jenkins and Docker, reducing human error and enabling consistent deployment across staging and production.
- Worked with business analysts to **translate requirements into technical solutions**, ensuring business objectives aligned with technical delivery.
- Conducted thorough unit and integration testing with **PyTest**, ensuring 95%+ test coverage across services.
- Contributed to system documentation and API specifications, streamlining onboarding for new engineers and external integrators.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed **Django and Flask APIs** that supported large-scale e-commerce and content management platforms.
- Improved SQL query efficiency by designing **normalized PostgreSQL schemas**, significantly reducing load times during peak usage.
- Deployed **cloud-native solutions on Azure and AWS**, leveraging serverless components (Azure Functions, AWS Lambda) for cost-optimized event-driven workloads.
- Implemented **OAuth2 and JWT authentication** for APIs, strengthening security and compliance with client requirements.
- Collaborated with frontend teams to provide **well-documented REST endpoints**, reducing API-related support tickets by 40%.
- Designed custom data pipelines for **ETL processes**, enabling seamless ingestion and transformation of high-volume datasets.
- Applied containerization strategies with **Docker Compose and Kubernetes**, ensuring reproducible development and production environments.
- Supported client delivery by conducting code reviews, debugging issues, and contributing to long-term maintainability improvements.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Designed and delivered **Flask and PHP backend modules** for custom enterprise solutions in retail and logistics.
- Assisted in implementing **SOAP-to-REST migration**, modernizing legacy systems for easier integration with modern applications.
- Wrote **PostgreSQL stored procedures and triggers**, improving data validation and ensuring consistent reporting.
- Deployed early **CI/CD pipelines with Jenkins** to automate deployments and testing cycles.
- Collaborated with distributed teams, improving agile delivery efficiency through Jira and Confluence workflows.
- Refactored legacy monolithic modules into **microservices**, improving maintainability and feature rollout speed.
- Participated in design reviews and system documentation for client-facing applications.
- Ensured **secure API consumption practices**, applying token-based authentication and rate limiting.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Supported development of **Flask-based internal applications**, focusing on CRUD APIs and basic authentication flows.
- Gained practical experience with **MySQL query optimization**, improving reporting performance on dashboards.
- Assisted in testing and debugging modules, ensuring reliability and accuracy across API endpoints.
- Collaborated with senior engineers to learn **REST design patterns**, following best practices for scalability.
- Experimented with cloud deployment, deploying small apps on **AWS EC2 instances** for staging purposes.
- Contributed to **documentation and test cases**, improving codebase readability and maintainability.
- Worked on integration tasks, connecting backend services to third-party APIs for SMS and email notifications.
- Learned principles of **software versioning (Git)** and agile methodologies, laying foundations for professional growth.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate**
- **Google Cloud Professional Cloud Developer**

- **Microsoft Certified: Azure Developer Associate**
 - **Certified Kubernetes Application Developer (CKAD)**
-

PROJECTS

- **AI-Powered API Assistant:** Built a prototype backend with **FastAPI + LangChain** that integrates LLMs for natural-language-driven API interactions, enabling conversational workflows.
- **Scalable Travel Booking System:** Designed a cloud-native backend (AWS Lambda, DynamoDB, FastAPI) capable of handling thousands of concurrent bookings with zero downtime.
- **E-commerce Analytics Pipeline:** Developed an ETL data pipeline with Python, PostgreSQL, and Redis to aggregate and analyze customer behavior in real time.
