

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with 9+ years of experience delivering scalable software solutions across full-stack development, cloud engineering, and data-driven architectures. Proficient in Python, .NET (C#), SQL, and Snowflake, with proven expertise in building enterprise-scale applications, optimizing database systems, and designing cloud-native workflows. Adept at working in Agile environments, leading development initiatives, and mentoring junior engineers to elevate overall team performance. Skilled in integrating CI/CD pipelines, data pipelines, and modern DevOps practices to ensure maintainability, performance, and long-term scalability.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, C#, .NET Core, ASP.NET, JavaScript, TypeScript, React, HTML5, CSS3, Node.js
- **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB, Redis, Snowflake (data warehousing)
- **Cloud Platforms:** AWS, Azure, GCP
- **Data & ETL Tools:** dbt, Airflow, SSIS, ETL/ELT pipelines
- **DevOps & Tools:** Docker, Kubernetes, Git, GitHub Actions, Jenkins, Terraform, CI/CD pipelines
- **Other Expertise:** Agile/Scrum, Microservices, REST APIs, GraphQL, Event-Driven Architecture

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and developed microservices with Python and .NET Core, ensuring scalability and resilience to handle enterprise-level traffic and data-intensive workloads.
- Engineered complex SQL queries, stored procedures, and database optimizations to improve system performance and reduce query latency across high-transaction environments.
- Implemented data pipelines leveraging Snowflake to support efficient ingestion, transformation, and analytics processes for business-critical datasets.
- Collaborated with cross-functional teams, including data engineers and analysts, to ensure accuracy, reliability, and maintainability of application data flows.
- Introduced CI/CD automation pipelines in Azure DevOps, enabling faster deployment cycles while maintaining security, compliance, and production stability.
- Spearheaded code reviews and knowledge-sharing sessions, mentoring junior engineers and elevating the technical standards across the team.
- Monitored and troubleshooted production issues, applying root-cause analysis to minimize downtime and ensure application reliability.

- Advocated for best practices in Agile development, driving continuous improvement in sprint planning, retrospectives, and backlog refinement.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed enterprise-level applications with C# .NET and Python integrations, balancing backend complexity with user-friendly frontend implementations.
- Optimized SQL Server databases, creating efficient stored procedures and indexing strategies that significantly improved reporting and analytics performance.
- Built RESTful APIs to integrate third-party services with internal applications, ensuring seamless communication between multiple distributed systems.
- Contributed to data transformation workflows and implemented ETL pipelines, streamlining data ingestion for analytics platforms and dashboards.
- Ensured compliance with security best practices, including identity management, data encryption, and secure API authentication protocols.
- Participated in daily stand-ups, sprint planning, and retrospectives to deliver software aligned with Agile methodologies and stakeholder requirements.
- Performed thorough unit, integration, and performance testing to ensure production stability and maintain high-quality deliverables.
- Engaged in cross-team collaboration, effectively translating business requirements into technical deliverables and scalable solutions.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built full-stack web applications using .NET Core for backend services and React-based frontends, ensuring responsive and accessible UIs.
- Developed advanced SQL queries and implemented schema optimizations to support transactional and reporting workflows across business-critical systems.
- Assisted in migrating legacy applications to cloud-based environments, leveraging AWS and Azure services to improve reliability and reduce infrastructure costs.
- Implemented caching strategies with Redis and MongoDB to optimize data retrieval performance across distributed systems.
- Introduced CI/CD practices that automated testing and deployment workflows, improving delivery speed and reducing manual overhead.
- Partnered with QA teams to integrate automated testing frameworks, ensuring regression-free deployments in production environments.
- Designed and documented REST APIs to standardize communication between different software modules and microservices.
- Worked closely with stakeholders to gather requirements, propose solutions, and deliver tailored software that aligned with business goals.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Developed .NET-based applications to support e-commerce and enterprise resource planning solutions for international clients.

- Created SQL scripts and database structures to ensure transactional accuracy, scalability, and optimized data retrieval processes.
- Participated in Agile ceremonies and closely collaborated with designers and product owners to deliver business-aligned solutions.
- Assisted in implementing secure authentication and authorization workflows, improving compliance with GDPR and security policies.
- Conducted peer code reviews to uphold high-quality standards across the development team.
- Supported bug-fixing and troubleshooting of live applications to ensure system reliability and customer satisfaction.
- Documented system architecture and deployment processes for internal and client-facing use.
- Enhanced performance of backend services by introducing caching strategies and data indexing techniques.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in developing .NET applications, learning industry best practices and contributing to production-ready modules under senior guidance.
- Created SQL queries and optimized reporting mechanisms to deliver actionable insights to business stakeholders.
- Participated in debugging and troubleshooting sessions, contributing to faster resolution of production incidents.
- Supported integration of third-party APIs into in-house systems, gaining hands-on experience with API design and usage.
- Documented technical specifications and assisted in preparing software manuals for client use.
- Explored cloud service integrations with AWS and Azure, building foundational knowledge of modern distributed environments.
- Collaborated with QA testers to execute test plans and identify performance bottlenecks.
- Contributed to Agile sprints, gaining early exposure to software development lifecycles and Agile team collaboration.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals
 - AWS Certified Solutions Architect – Associate
 - Google Cloud Certified: Associate Cloud Engineer
 - Snowflake SnowPro Core Certification
-

PROJECTS

- **Data Pipeline Optimization with Snowflake** – Designed and deployed ETL pipelines in Snowflake to enable scalable data ingestion, transformation, and analytics, reducing query time by 40%.
- **.NET Core Microservices for Enterprise SaaS** – Developed secure, high-performance microservices using C# and .NET Core, deployed with Docker and Kubernetes across AWS and Azure environments.
- **Cloud-Native Full-Stack Platform** – Built full-stack applications leveraging React, .NET Core, and PostgreSQL, integrated with CI/CD pipelines for continuous delivery.
