

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-oriented Senior Software Developer with over 8 years of experience in full-stack development and AI-enabled applications. Skilled in Python, C#, and Azure services including Azure Functions, Data Lake, Cosmos DB, and DevOps. Proven track record of delivering scalable cloud-native solutions and integrating intelligent features using Azure AI services. Adept in data modeling, security, and infrastructure automation using Terraform. Passionate about leveraging machine learning and AI to solve complex business problems in innovative, value-driven environments.

TECHNICAL SKILLS

- **Languages:** Python, C#, JavaScript, TypeScript, SQL, Bash
- **Cloud & DevOps:** Microsoft Azure (Functions, App Services, Cosmos DB, Data Lake, DevOps), Terraform, Docker, Git, CI/CD
- **AI & ML:** Azure AI Services, OpenAI, LLMs, Retrieval-Augmented Generation (RAG), LangChain
- **Web & App Development:** React, Next.js, Angular, Vue.js, Node.js, .NET Core
- **Database Systems:** Cosmos DB, PostgreSQL, MongoDB, MS SQL Server
- **Infrastructure & Security:** Azure IAM, Networking, Blob Storage, Role-Based Access Control, Secrets Management
- **Tools:** GitHub Actions, Azure DevOps, Postman, JIRA, Visual Studio, VS Code

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented AI-driven solutions in Python and C# using Azure AI Services for predictive analytics and intelligent data processing across various client platforms.
- Built and deployed serverless cloud-native applications on Azure using Azure Functions, App Services, and Cosmos DB to optimize scalability, cost, and maintainability.
- Collaborated on integrating AI and ML features into enterprise applications, enabling intelligent user interactions through natural language processing and LLM integrations.
- Orchestrated Terraform-based IaC deployments for Azure cloud infrastructure, ensuring repeatable and secure provisioning aligned with governance policies.
- Developed and maintained RAG (Retrieval-Augmented Generation) pipelines for contextual document search using LangChain, Azure Cognitive Search, and OpenAI APIs.
- Led cross-functional teams in migrating monolithic legacy systems to microservices-based architecture hosted on Azure with full CI/CD automation using Azure DevOps.

- Applied advanced data modeling techniques including conceptual and logical schema designs for distributed database integration across Cosmos DB and Azure Data Lake.
- Implemented enterprise-grade authentication and access controls using Azure Active Directory and managed secret rotation and RBAC policies for enhanced security.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed and maintained customer-facing platforms using React and .NET Core, integrating Azure Web Apps and RESTful APIs for real-time campaign analytics.
- Engineered scalable backend solutions using C# and Azure Functions, managing data ingestion pipelines from IoT devices into Azure Data Lake and Cosmos DB.
- Applied AI capabilities for campaign optimization, using Python scripts to analyze user behavior and generate insights used by the marketing automation platform.
- Designed and implemented continuous integration pipelines with Azure DevOps to automate deployments, run tests, and maintain production stability.
- Participated in code reviews and architectural discussions for migrating legacy PHP systems to cloud-native architectures leveraging serverless Azure resources.
- Created interactive dashboards that visualized analytics from Azure Data Explorer and Power BI, helping clients make real-time business decisions.
- Ensured high availability and security by implementing health probes, autoscaling rules, and secure token-based access for external data APIs.
- Maintained compliance with GDPR and ISO standards by implementing proper data encryption, anonymization, and access logging strategies across systems.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Designed and built RESTful APIs in C#/.NET integrated with Azure App Services and managed infrastructure automation with Terraform templates and deployment scripts.
- Developed Python-based data parsers and automation scripts that interfaced with Azure Data Lake for large-scale ingestion and classification of unstructured files.
- Contributed to modernization of on-prem systems to Azure PaaS models, introducing microservices, containerization, and DevOps best practices.
- Engaged in developing chatbots powered by Azure Bot Framework and Cognitive Services for automated customer support in logistics and retail sectors.
- Conducted thorough testing and performance tuning for cloud-based applications using Azure Monitor and Application Insights to improve system observability.
- Led workshops on secure development lifecycle and data protection for junior developers to promote security-aware coding and compliance.
- Built Azure WebJobs and Functions to support scheduled tasks for file synchronization, transformation, and real-time notification dispatching.
- Managed schema migrations and data transformation logic using Entity Framework Core and SQL Server to ensure seamless data continuity.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Created custom modules for Azure-hosted CMS systems using .NET and JavaScript to support multilingual content delivery and geo-targeted personalization.
- Integrated Azure Blob Storage and Cognitive Services to provide AI-based image recognition and metadata tagging in marketing campaigns.
- Automated deployment workflows with Git and Azure DevOps pipelines, reducing manual release time by 40% through optimized YAML configurations.
- Ensured all applications followed security guidelines for Azure tenants, including custom roles, policies, and conditional access for remote users.
- Contributed to design of scalable backend architecture using queues, event-driven processing, and API gateways for retail client solutions.
- Developed prototype using Python and OpenAI APIs to summarize long-form documents into semantic clusters used in business intelligence reporting.
- Wrote integration scripts to sync customer data with Azure Cosmos DB and maintain referential integrity using distributed data design patterns.
- Participated in Agile ceremonies, sprint reviews, and technical knowledge sharing that influenced architecture decisions in small agile teams.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in building internal admin tools with .NET and Angular, managing deployment on Azure Web Apps and Blob Storage for assets.
- Developed unit test suites using xUnit and MSTest to improve application reliability, increasing test coverage from 30% to 80% within the first 3 months.
- Created PowerShell scripts to automate resource group provisioning in Azure and configured DevTest Labs for internal training environments.
- Supported senior engineers in migrating legacy WCF services to RESTful APIs with OAuth2 authentication and Azure-hosted endpoints.
- Optimized queries and data flows for document handling systems integrated with Azure SQL Database, reducing latency by over 50%.
- Managed code repositories, resolved merge conflicts, and monitored CI builds, gaining early exposure to full-stack software development processes.
- Participated in design sessions and POCs involving Azure Functions for log processing and webhook-driven workflows.
- Implemented error tracking with Application Insights and configured alerting rules for anomalies based on response times and error rates.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure AI Engineer Associate (AI-102)
- ❖ Microsoft Certified: Azure Developer Associate (AZ-204)
- ❖ Terraform on Azure – HashiCorp Certified (In Progress)

- ❖ Building Intelligent Apps with Azure OpenAI (Coursera)
-

PROJECTS

- ✓ **AI Document Assistant with RAG (Azure & LangChain)**
Built a smart assistant to extract key insights from internal documents using LangChain, Azure Cognitive Search, and OpenAI APIs. Integrated with Azure Functions for triggering workflows.
- ✓ **Smart Campaign Optimizer (Azure AI + Python)**
Developed ML-driven ad optimization engine using Azure Machine Learning and Python. Deployed via Azure Web Apps and integrated with campaign analytics dashboards.
- ✓ **Infrastructure Automation for IoT Fleet (Terraform)**
Automated full deployment of IoT analytics platform using Terraform for Azure, managing Data Lake, IoT Hub, and Functions with scalable and secure provisioning.
