

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Full Stack Engineer with over 8 years of hands-on experience in backend-heavy systems using Python, AWS, SQL, and DevOps infrastructure. Proven success in API development, scalable data modeling, CI/CD pipelines, and automation. Comfortable contributing across the stack, including React and TypeScript. Seeking to leverage backend leadership and cloud expertise in a remote B2B Full Stack role with modern infrastructure.

TECHNICAL SKILLS

- **Backend:** Python, Node.js, Express.js, JavaScript (ES6+), TypeScript
- **Frontend:** React, Redux, HTML5, CSS3, TailwindCSS
- **Database:** PostgreSQL, MySQL, MongoDB, Firebase
- **DevOps/Cloud:** AWS (EC2, Lambda, S3, RDS, CDK, CloudFormation), Docker, GitHub Actions, GitLab CI/CD
- **Tools & APIs:** REST APIs, GraphQL, Swagger/OpenAPI, Terraform, Postman
- **Testing:** Jest, Mocha, Pytest, TDD
- **Others:** Git, Agile/Scrum, Jira, Linux

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented robust backend APIs in Python, supporting large-scale platforms with strict performance and uptime requirements.
- Architected scalable PostgreSQL data models and optimized database access layers using SQLAlchemy and raw SQL for performance-critical operations.
- Developed CI/CD pipelines using GitHub Actions and GitLab CI to ensure rapid, automated deployments to AWS environments.
- Used AWS CDK and CloudFormation to provision infrastructure-as-code, enabling reproducible and version-controlled cloud infrastructure.
- Created microservices with Dockerized deployments orchestrated on AWS ECS and Lambda for scalability and fault tolerance.
- Supported frontend development in React and TypeScript by delivering well-structured REST endpoints and contributing to shared UI components.

- Integrated logging and monitoring tools (CloudWatch, Sentry) to maintain system reliability and observability.
- Led code reviews and mentored junior engineers on best practices in Python, DevOps automation, and scalable API design.
- Introduced GitFlow and enforced TDD practices that improved system stability and reduced regression bugs across all releases.
- Worked cross-functionally with product owners to translate business logic into backend implementations aligned with data model constraints.
- Built secure user authentication and authorization modules using JWT and OAuth 2.0 standards.
- Containerized legacy services into modern Docker-based workflows, reducing deployment time and improving local development parity.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Implemented backend services in Python and Node.js for campaign automation tools and analytics dashboards.
- Designed REST APIs integrated with PostgreSQL and MongoDB for dynamic marketing campaign data retrieval and tracking.
- Automated CI/CD pipelines with Jenkins and Docker to deploy backend services to cloud environments in AWS and Azure.
- Developed React components with Redux for analytics visualization, integrated with backend event tracking APIs.
- Refactored existing codebases to adopt modular architecture principles and improve testability with unit and integration tests.
- Deployed services using container orchestration with Docker Compose in staging and production environments.
- Collaborated with data teams to define efficient schema designs for large customer interaction datasets.
- Integrated third-party services (email, SMS, CRM) via secure API gateways and token-based authentication.
- Resolved performance bottlenecks by profiling slow endpoints and optimizing SQL queries using indexes and query planners.
- Created health check endpoints and integrated with uptime monitoring tools like UptimeRobot and Grafana dashboards.
- Maintained documentation for APIs and deployment pipelines using Swagger and Markdown in Git repos.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Engineered backend logic for content management systems and e-commerce APIs in Python and JavaScript.
- Built interactive React frontends for inventory management and digital product showcases.
- Worked on schema design and query optimization for transactional data in MySQL and PostgreSQL.
- Wrote data transformation scripts to migrate legacy systems into modern microservices using Python and shell automation.
- Developed AWS Lambda functions for serverless workflows tied to S3 triggers and SNS notifications.

- Contributed to analytics modules by exposing API endpoints for reporting dashboards in frontend.
- Created reusable frontend hooks and services in React with TypeScript and Axios.
- Improved system stability by automating test coverage with Mocha and Pytest frameworks.
- Supported team adoption of Git-based version control and release branching strategies.
- Managed ticket estimation and backlog refinement with PMs using Agile Scrum methodologies.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Built internal admin tools using Python Flask backend and vanilla JavaScript frontends.
- Implemented core features such as data import/export, table pagination, and role-based access.
- Built dashboards to monitor internal tool usage and detect anomalies in system data flows.
- Designed user authentication and permission flows using session-based logic and tokenized roles.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in Python scripting for internal automation tasks and unit testing coverage.
- Supported database migrations and schema updates using Alembic and SQL scripts.
- Shadowed senior developers in developing microservices and RESTful endpoints.
- Participated in daily stand-ups, contributing to bug fixes and internal documentation.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **AWS Certified Developer – Associate (2024)**
- ❖ **Python for Data Engineers (Udemy)**
- ❖ **Full Stack Web Development with React and Node.js (Coursera)**

PROJECTS

Data Insights Dashboard –

- Full stack internal analytics tool with Python (Flask), React, PostgreSQL, and AWS hosting. Built REST APIs, custom metrics aggregators, and frontend charts using Recharts.

AWS Deployment Automation –

- Developed IaC using AWS CDK and GitHub Actions to auto-deploy microservices. Included rollback logic, staging previews, and Slack notifications.

Marketing Campaign Engine –

- Backend system in Python that served dynamic assets and tracked performance metrics, with analytics sent to a React dashboard in real-time.
