

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced full-stack engineer and team leader with over 9 years of hands-on experience in designing and delivering scalable, secure, and maintainable software systems. Proven expertise in Python, Django, PostgreSQL, Docker, and cloud platforms, with an additional focus on AI quality assurance, autonomous validation platforms, and full ownership of complex SaaS projects. Seeking to contribute to the mission of Validaitor in advancing trustworthy AI systems through robust engineering and leadership.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript (ES6+), TypeScript, SQL, Bash
- **Frameworks:** Django, FastAPI, Node.js, Next.js, React.js, jQuery
- **Databases:** PostgreSQL, MySQL, MongoDB, ElasticSearch
- **DevOps & Cloud:** Docker, Docker Compose, Kubernetes (basic), AWS EC2/S3, Azure VMs, DigitalOcean
- **Testing & QA:** Pytest, UnitTest, Postman, bUnit, Jest
- **Tools & Platforms:** Git, GitHub Actions, Bitbucket, Jira, Notion, REST, GraphQL
- **Other:** Agile/Scrum, CI/CD, System Design, Leadership, API Design

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led cross-functional agile teams in the development of B2B SaaS platforms using Django, PostgreSQL, and React/Next.js deployed via Docker on cloud environments.
- Implemented API-first backend systems using Django REST Framework, ensuring 100% test coverage with Pytest and seamless integration with multiple frontends and third-party services.
- Designed cloud deployment workflows using Docker Compose and GitHub Actions for AWS and Azure infrastructure, achieving multi-cloud readiness.
- Built intelligent data ingestion pipelines using Python that aggregated metrics from IoT sources and logged them efficiently in PostgreSQL and MongoDB.
- Introduced internal CI/CD standards and code quality gates via GitHub Actions, significantly reducing bugs in production and accelerating sprint velocity.
- Coordinated end-to-end system testing, regression test scripts, and platform verification protocols following ISO-aligned QA processes.

- Provided technical mentoring to junior developers and led architectural discussions, improving system scalability and team performance.
- Conducted thorough code reviews across backend and frontend codebases to enforce best practices in security, performance, and reusability.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed cloud-native marketing automation tools using Python, Django, and Celery, handling real-time consumer interactions and campaign analytics.
- Engineered scalable frontend modules using React and integrated REST/GraphQL APIs with dynamic dashboards tailored to client KPIs.
- Migrated monolithic services into modular Dockerized microservices, improving system uptime and fault tolerance across AWS environments.
- Integrated NoSQL solutions like MongoDB for high-volume event tracking while combining structured analytics in PostgreSQL.
- Configured Docker containers for development, testing, and production environments, and orchestrated them via Docker Compose and GitLab CI/CD pipelines.
- Implemented authentication and permission models using JWT and OAuth2.0, improving security and user-level data segmentation.
- Authored technical documentation and API specs using Swagger and Notion to support cross-team onboarding and external clients.
- Collaborated with UI/UX teams and performed frontend accessibility testing using Lighthouse and Chrome DevTools.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Designed and implemented multi-tenant CRM modules with Django backend and Vue.js frontend, used by dozens of regional SME clients.
- Integrated Elasticsearch-based search systems across multiple entities, optimizing retrieval of customer support tickets and product inventories.
- Automated customer report generation pipelines using Pandas and PostgreSQL procedures, significantly reducing manual workload.
- Performed data normalization and migration scripts between MySQL and PostgreSQL systems using custom Python ETL jobs.
- Maintained rigorous documentation and ensured GDPR compliance across all user data pipelines and cookie/session tracking methods.
- Worked with AWS Lambda and S3 to offload static file processing and event-based triggers, reducing infrastructure costs.
- Built REST APIs with proper input validation and test cases, enabling safe integration with third-party apps and internal dashboards.
- Participated in daily stand-ups and sprint planning, refining tasks for continuous delivery with high visibility and low technical debt.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Helped migrate legacy PHP services into Python-based Django apps to standardize backend logic and improve maintainability.
- Assisted in creating frontend modules using jQuery and Bootstrap integrated with Django templates for responsive web portals.
- Built internal management dashboards connected to PostgreSQL using Django ORM, with filters and aggregate logic for quick access.
- Maintained Git version control and collaborated in code reviews, gradually adapting team processes to Agile practices.
- Deployed apps via Docker containers on DigitalOcean droplets and managed basic monitoring tasks via Cron and systemd.
- Developed admin modules with user audit trails and granular role-based permissions, enhancing transparency and traceability.
- Conducted manual QA and wrote unit tests using Django's test framework, catching regressions before deployment.
- Wrote technical specs and postmortems for internal bug-fix cycles, improving retrospective feedback loops.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Developed student-facing dashboards for course progress tracking using Django and PostgreSQL, deployed on internal LAN.
- Implemented initial CI scripts using Bash and Git to automate testing and deployment processes.
- Collaborated with senior devs to build forms-based workflows, handling edge cases and validation logic with Django Forms.
- Performed test-driven development and maintained documentation to onboard future interns and junior hires.
- Optimized SQL queries in student performance modules, decreasing query load time by over 60% for large classes.
- Participated in regular sprint retrospectives and demo presentations, gaining early exposure to Agile processes.
- Investigated and fixed over 50 bugs logged by QA during testing cycles, including user session handling and validation cases.
- Configured virtual environments and standardized internal development setup using pip, venv, and custom shell scripts.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Docker & Kubernetes: The Complete Guide – Udemy, 2024
 - ❖ Python for Cloud Automation – Coursera, 2023
 - ❖ Django Advanced: Security and Optimization – Pluralsight, 2023
 - ❖ Cloud Developer Essentials (AWS & Azure) – Cloud Academy, 2023
 - ❖ Git Version Control Masterclass – Udemy, 2022
-

PROJECTS

- ✓ **Cross-Cloud Validation Suite**
Designed and deployed a system validation and data integrity platform across AWS and Azure using Docker, Django, and GitHub Actions. Supported full regression and performance testing.
- ✓ **IoT Metrics Dashboard**
Built a full-stack IoT dashboard collecting data from edge devices, storing in MongoDB, and visualizing with Next.js frontend. Integrated secure REST APIs and role-based dashboards.
- ✓ **Compliance Automation Engine**
Led a Python-based compliance checking tool leveraging Elasticsearch to scan and report non-compliant records in large datasets. Built internal API and frontend using React.
