

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and results-driven Senior Python Fullstack Engineer with over 9 years of professional experience designing and developing scalable backend systems and responsive web applications. Specialized in Python (Django), TypeScript, React, and cloud platforms including AWS and GCP. Passionate about cybersecurity, vulnerability intelligence, and emerging tech. Seeking to contribute to cutting-edge R&D-driven environments by building secure, efficient, and impactful software solutions.

TECHNICAL SKILLS

- **Backend Development:** Python, Django, Django REST Framework, Node.js, Express.js
- **Frontend Development:** React.js (v18/19), Next.js, TypeScript, Tailwind CSS, Redux, HTML5, CSS3
- **Database Technologies:** MySQL, PostgreSQL, MongoDB, SingleStore, Redis, SQLite
- **Cloud & DevOps:** AWS, GCP, Azure, Docker, Kubernetes, CI/CD, GitHub Actions, GitLab CI
- **Security Tools:** SAST, DAST, VM Scanning, Container Security, OWASP ZAP
- **Big Data & Analytics:** BigQuery, Redshift, Snowflake, Databricks
- **Testing & QA:** Jest, Cypress, React Testing Library, PyTest, TDD
- **Tools & Platforms:** Jira, Bitbucket, Git, VS Code, Postman, Linux

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Architected scalable backend services using Python (Django 4.2) and MySQL, powering a multi-tenant risk management platform for enterprise clients in finance and security.
- Built RESTful APIs with Django REST Framework to support automated workflows in vulnerability detection and risk analysis across hybrid cloud environments.
- Developed complex frontend modules with React 18+, TypeScript, and Tailwind CSS, implementing role-based access controls, dashboards, and alert systems.
- Integrated 20+ third-party APIs including VM scanners, container registries, and threat intel feeds to enhance the platform's exposure aggregation capabilities.
- Led system design sessions to improve performance bottlenecks in batch data processing pipelines and microservice-to-microservice communication latency.

- Automated CI/CD pipelines using GitHub Actions and Docker containers to support faster deployment cycles and ensure zero-downtime updates.
- Participated in R&D with cross-functional teams to prototype AI-driven asset prioritization models using real-time vulnerability trends and metadata scoring.
- Conducted extensive code reviews and mentored junior engineers on backend architecture and secure coding practices aligned with OWASP standards.
- Implemented data lake ingestion to SingleStore for analytics teams to perform near-real-time vulnerability scoring using big data frameworks.
- Designed and enforced end-to-end encryption protocols for sensitive scan data transmitted between client nodes and central threat assessment core.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed fullstack modules using Python (Flask) and React to manage real-time campaign data for digital marketing analytics used by top-tier clients.
- Built an internal admin dashboard in React with dynamic visualizations to monitor engagement metrics, user cohorts, and lead funnel conversions.
- Created scalable data ingestion services for processing multi-gigabyte CSV and JSON datasets using Python's async capabilities and PostgreSQL.
- Deployed microservices to AWS using Docker and CloudFormation, enabling decoupled infrastructure for better security and scalability.
- Enhanced platform security posture by integrating OAuth 2.0 and JWT-based access management for internal and client-facing APIs.
- Worked closely with DevOps to implement robust CI/CD pipelines using Jenkins and GitLab CI, supporting over 100 deployments monthly.
- Spearheaded migration of legacy APIs from PHP to Django REST Framework, improving performance by 60% and reducing bugs across endpoints.
- Designed alert and notification systems with dynamic filters for threat detection based on anomaly patterns in API request logs.
- Delivered solutions with a strong focus on data privacy, ensuring GDPR compliance and encryption of PII in transit and at rest.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed internal web-based tools using Django and Angular to streamline client onboarding workflows and user management systems.
- Designed scalable MySQL schemas and wrote advanced SQL queries to support reporting dashboards and KPI tracking for operational performance.
- Implemented automated scripts for data validation and cleanup to ensure accuracy across user accounts, audit logs, and activity trails.
- Created visualization modules using React and Chart.js to show real-time performance metrics, SLA tracking, and security compliance statuses.
- Deployed and monitored application environments on GCP Compute Engine and integrated monitoring tools like Prometheus and Grafana.
- Engineered backend logic to support multi-language content delivery and role-based permissions for a global SaaS analytics platform.

- Built RESTful APIs with extensive unit and integration test coverage, ensuring high reliability and coverage over 90%.
- Participated in bi-weekly sprint reviews, contributed to backlog grooming, and led two successful feature releases under tight deadlines.
- Enhanced system reliability by implementing retry queues and circuit breakers for all external API dependencies.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed reusable Python components for automating web scraping and report generation from multiple e-commerce platforms.
- Built lightweight Flask-based dashboards for internal use, focusing on modularity and responsiveness in user interactions.
- Migrated monolithic applications into modular blueprints for better scalability and team ownership across microdomains.
- Integrated external authentication mechanisms via SAML for internal tools used in partner collaboration.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in building Django-based tools for internal IT automation and issue tracking workflows.
- Learned fundamentals of secure backend development by writing form validations, CSRF-protected routes, and database sanitizations.
- Collaborated in Agile sprints to fix bugs and deliver new features across multiple internal modules including user profiles and logs.
- Experimented with containerization and deployed early Docker environments under mentorship guidance.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Certified Django Developer – Django Software Foundation
- ❖ AWS Certified Developer – Associate (2023)
- ❖ Google Cloud Associate Cloud Engineer (2023)
- ❖ Secure Coding Practices for Python – Cybrary (2024)
- ❖ React Security Masterclass – Udemy (2023)

PROJECTS

- ✓ **AI-Powered Vulnerability Intelligence Platform** – *Sensidev*
Led development of a real-time threat and vulnerability scoring system integrating SAST, DAST, and container scans. Built scalable backend with Django and SingleStore and frontend dashboard in React + Tailwind. The system handled over 500K assets and cut response time by 40%.
- ✓ **Security Exposure Hub Integrator** – *Syscom Digital*
Developed an API gateway and aggregator for 30+ external security tools using Python microservices and RabbitMQ queues. Implemented retry logic, failover patterns, and asynchronous batch loaders. Enabled faster exposure correlation and visualization for SOC analysts.
