

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and product-focused Software Engineer with over 9 years of experience building scalable backend systems, cloud-native APIs, and enterprise-grade ERP solutions. Proven ability to deliver performant microservices using Python, FastAPI, and containerized DevOps tooling such as Docker and Kubernetes. Comfortable in startup environments, building MVPs quickly, and working across disciplines to align engineering with user outcomes. Skilled in data engineering, infrastructure automation, and integrating ML components into production environments.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, SQL, Bash
- **Backend:** FastAPI, Flask, Django (basic), Odoo ORM
- **Frontend:** React, Next.js, Tailwind CSS, Redux, jQuery, HTML/CSS
- **Data/ML Tools:** Pandas, NumPy, Sci-kit Learn (basic), Snowflake, Databricks
- **Databases:** PostgreSQL, MySQL, MongoDB, Elasticsearch
- **Cloud & Infra:** Kubernetes, Docker, GitHub Actions, Heroku, DigitalOcean, Vercel
- **Testing & DevOps:** Pytest, TDD, CI/CD Pipelines, Git, Linux Shell
- **Other Tools:** Postman, Figma, Storybook, Zeplin, JIRA, Confluence

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Built FastAPI microservices integrated into a Kubernetes deployment, delivering model-based inference APIs and scalable internal tools for ERP and analytics systems.
- Designed pub/sub-based event architecture using Redis Streams to coordinate asynchronous jobs across ML pipelines and transactional microservices.
- Implemented JWT + OAuth2-secured API layers, exposing robust endpoints for internal apps and third-party mobile clients across finance, CRM, and HR domains.
- Developed PostgreSQL and Elasticsearch indexing strategies for scalable querying of CRM records, achieving over 60% faster response times in production dashboards.
- Contributed to an internal ML model integration using FastAPI for exposing predictions via REST endpoints, handling pre/post processing using Pandas pipelines.
- Deployed services on Docker and Kubernetes clusters with GitHub Actions-based CI/CD workflows, managing staging, production, and rollback strategies with minimal downtime.
- Mentored junior developers and led architectural decisions for refactoring legacy monoliths into containerized microservices aligned with event-driven patterns.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Engineered robust FastAPI backends with Snowflake database connectors to aggregate marketing campaign data across several external analytics and CRM APIs.
- Developed Odoo modules that orchestrated ML-based segmentation and automated lead prioritization based on live campaign feedback from external channels.
- Created monitoring tools to visualize API health and system events using Prometheus metrics and Grafana dashboards piped through FastAPI middleware.
- Optimized Python code for handling streaming datasets from advertising platforms, handling anomaly detection and cleaning malformed or partial records.
- Applied DevOps best practices using Docker Compose and GitHub Actions to streamline deployment across development and staging environments with automated testing.
- Contributed to deployment of asynchronous background tasks using Celery and Redis to enable heavy data processing workloads without blocking user-facing requests.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Architected internal HR systems with Python APIs served via FastAPI, managing employee lifecycle events and integrating Kubernetes for deployment scaling.
- Wrote custom integrations to Databricks for processing payroll and timesheet data, leveraging SQL and Pandas to handle reconciliation and transformation tasks.
- Migrated legacy monolithic Odoo apps to modular FastAPI services with PostgreSQL backends, reducing average response time and improving debugging traceability.
- Automated deployment pipelines using Docker, Kubernetes, and GitLab CI/CD for continuous delivery of HR and finance tools across on-prem and cloud environments.
- Collaborated with analysts to integrate analytics pipelines into operational dashboards, using Plotly and FastAPI to serve real-time visualizations.
- Defined internal schema standards for REST API endpoints and authored documentation using Swagger/OpenAPI for internal API consumption.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Built FastAPI services to support ingestion of analytics logs into PostgreSQL, enabling near real-time reporting for marketing clients across multiple industries.
- Refactored Odoo ORM modules to better comply with new data architecture, resolving bottlenecks and improving reporting reliability.
- Created CLI tools for reconciling customer data across multiple ERP versions, reducing manual reconciliation time by more than 40%.
- Used Kubernetes to orchestrate containerized deployments for QA and production, ensuring consistent environment behavior and easier rollback.
- Supported team with frontend modernization, aligning older Odoo templating systems with JavaScript and HTML best practices.
- Led testing initiative for staging environment upgrades, creating scripts and mock environments to evaluate system stability pre-deployment.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Developed internal Python microservices using FastAPI prototypes to test API-driven account log access and ERP metadata services.
- Conducted early performance testing of containerized environments on Docker, enabling team to identify memory leaks in ERP module code.
- Wrote scripts for batch transformations of Excel and CSV records during early ERP onboarding projects, ensuring data integrity and migration safety.
- Participated in cross-functional architecture reviews for API-first development, helping build mental models for scalable service communication.
- Studied Odoo framework extensively and contributed to client-side UI patches, fixing bugs and edge cases in multiple views.
- Authored internal documentation covering API contracts, request/response formats, and expected behaviors under stress testing.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Python for Data Science** – Coursera
- ❖ **Docker for Developers** – Udemy
- ❖ **Odoo Technical Training** – OdooClass
- ❖ **Kubernetes for Developers** – Linux Foundation
- ❖ **Designing Event-Driven Architectures** – Pluralsight

PROJECTS

- ✓ **ML Inference Gateway**
Built a FastAPI-based backend exposing ML model predictions over REST, integrating with Kubernetes autoscalers and Redis queues for scalable job orchestration.
- ✓ **ERP Campaign Sync Tool**
Custom FastAPI and Odoo service to fetch, normalize, and synchronize CRM campaign data with live dashboards and lead attribution systems.
- ✓ **Finance Report Generator**
Python microservice using FastAPI, Pandas, and Celery to generate real-time financial summaries in PDF/CSV, with scheduler triggers and Slack integration.
- ✓ **Kubernetes CI/CD for FastAPI Apps**
Developed containerized CI/CD pipelines for FastAPI projects using GitHub Actions, Helm charts, and automated deployment to DigitalOcean Kubernetes clusters.
