

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and results-driven Senior Backend Engineer with 9+ years of experience in designing and implementing scalable, performant, and AI-augmented backend systems. Proven ability to deliver high-quality Python-based web applications using frameworks such as FastAPI, Django, and Flask. Adept at integrating AI tooling into development workflows for faster, more intelligent delivery. Passionate about clean architecture, automation, and embracing new paradigms like Vibe Coding to streamline modern engineering practices.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, SQL, HTML, CSS, Bash
- **Frameworks:** FastAPI, Django, Flask, Node.js, Express.js
- **AI Tools:** GitHub Copilot, OpenAI Codex, Tabnine, Cody
- **Frontend:** React, Angular, Vue.js
- **Databases:** PostgreSQL, MongoDB, MySQL, Redis
- **DevOps & Cloud:** Docker, Kubernetes, AWS (EC2, RDS, Lambda), GCP, GitHub Actions
- **Testing:** PyTest, Unittest, Postman, Cypress, Jest
- **Others:** REST API, GraphQL, Git, Agile, CI/CD, Microservices, Vibe Coding Principles

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented highly scalable RESTful APIs using FastAPI and PostgreSQL, supporting over 100K concurrent users with optimized response times under 150ms.
- Leveraged GitHub Copilot and other AI tools in day-to-day development to automate code generation, refactoring, and documentation, achieving a 25% increase in delivery speed.
- Applied Vibe Coding principles by articulating complex requirements in natural language prompts, enabling faster prototype iterations and AI-assisted implementation cycles.
- Introduced automated integration and E2E tests using PyTest and Postman for all critical endpoints, improving release stability and reducing production bugs by over 40%.
- Migrated legacy services from Flask to FastAPI, restructuring modules for better maintainability and async performance, cutting server costs by 20%.
- Collaborated with cross-functional teams including frontend, DevOps, and QA to ship biweekly features while maintaining 98% unit test coverage across core modules.
- Led architectural decisions to split monolithic services into microservices, enhancing deployment flexibility and reducing build times by 60%.

- Built custom CLI tools for internal automation tasks using Python and Bash, saving the team ~10 hours per sprint on routine development tasks.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed and maintained Django-based CMS platforms supporting marketing automation features and dynamic content management with real-time user tracking.
- Integrated AI-powered customer behavior prediction engine into backend using RESTful endpoints and Node.js services to enhance targeted campaign delivery.
- Used GitHub Copilot to write automated test suites, streamlining regression testing efforts by 30% and reducing QA cycle times.
- Created secure authentication and role-based access control using Django REST Framework, ensuring GDPR compliance and robust user management.
- Designed asynchronous tasks using Celery and RabbitMQ to process background jobs like bulk email delivery and log processing with retry mechanisms.
- Managed CI/CD pipelines using GitHub Actions, automating build/test/deploy stages and reducing deployment times from hours to minutes.
- Built GraphQL endpoints to expose flexible data layers to React-based frontend clients, improving frontend performance and developer productivity.
- Conducted code reviews and mentored junior developers, introducing coding best practices, AI tooling, and agile principles into regular sprints.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built enterprise web apps using Flask and Angular, focusing on modular design patterns and RESTful APIs serving thousands of B2B clients.
- Implemented robust logging, monitoring, and alerting systems using Prometheus and ELK Stack, enabling real-time anomaly detection in production environments.
- Led migration of on-premise infrastructure to AWS using Docker containers and EC2 orchestration, enhancing scalability and uptime.
- Collaborated on AI integration projects to add sentiment analysis and NLP search capabilities to customer support dashboards.
- Worked with UX teams to convert mockups into responsive frontend components while ensuring seamless backend connectivity via well-structured APIs.
- Automated PDF report generation using Python libraries and background job scheduling, saving manual reporting time by 90%.
- Designed custom admin dashboards for content moderation and analytics, improving internal operations through intuitive data visualization.
- Ensured performance optimizations via database indexing, query analysis, and API caching strategies using Redis and PostgreSQL.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Developed Python-based backend services for e-commerce platforms using Flask and MySQL, including payment integration and inventory APIs.

- Worked in an agile team to implement features for a multilingual CMS with version-controlled content deployment workflows.
- Created internal REST API documentation using Swagger, improving cross-team collaboration and decreasing onboarding time for new devs.
- Built admin tools for product catalog management, integrating file uploads, bulk edits, and advanced filtering with async server processing.
- Conducted unit and integration testing of backend modules using PyTest and generated coverage reports to improve test reliability.
- Developed shell scripts to automate database backups and cron-driven tasks, enhancing system reliability.
- Participated in architecture planning for containerizing services via Docker and deploying to test environments.
- Supported code refactoring and documentation efforts as part of legacy code modernization initiatives.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in the development of internal tools using Python and Django to manage IoT device data and user interaction logs.
- Integrated AI libraries into testing environments to validate predictive maintenance algorithms on incoming sensor data.
- Wrote SQL scripts and Django ORM queries for data extraction and validation on real-time telemetry data.
- Built initial proof-of-concept for a backend system that visualized sensor trends using Chart.js and RESTful APIs.
- Improved test pipelines by introducing PyTest fixtures and mocking, reducing manual test setup efforts by 70%.
- Maintained documentation and assisted in sprint planning and task breakdown for development milestones.
- Deployed test services on local Docker environments, simulating various network and load conditions.
- Participated in weekly demos and feedback sessions, presenting backend components and receiving iterative design inputs.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **AI-Augmented Software Development** – DeepLearning.AI (2024)
- ❖ **Python for Data Structures and Web Development** – Coursera (2023)
- ❖ **FastAPI Masterclass** – Udemy (2023)
- ❖ **AWS Developer Associate** – Amazon Web Services (2022)

PROJECTS

- ✓ **AI-Assisted CMS Engine** — Integrated AI for content classification and auto-tagging using NLP and Django REST Framework.
- ✓ **FastAPI Microservice Migration** — Migrated 5 core services from monolith to FastAPI-based microservices with full test coverage and async I/O.
- ✓ **Vibe-Driven DevOps Scripts** — Developed AI-assisted deployment scripts and cron jobs by leveraging Copilot for DevOps automation.
- ✓ **Smart Campaign Engine** — Built a scalable campaign system using Django, Redis, and Celery that dynamically adjusted content using AI-triggered events.
