

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Backend Engineer with 9+ years of experience designing, developing, and deploying **high-performance API systems, cloud-native services, and large-scale distributed applications**. Proven expertise in **Python, FastAPI, AWS, GCP, Docker, Kubernetes, SQL, NoSQL, Redis, API security, and CI/CD pipelines**. Skilled at architecting **multi-service API Gateways, securing sensitive integrations, optimizing performance, and ensuring observability** in FinTech, RegTech, and enterprise platforms. Adept at delivering **scalable solutions in fast-moving environments** while mentoring teams and driving technical excellence.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python 3.11+, FastAPI, asyncio, TypeScript, JavaScript (ES6), Go
- **API & Security:** REST, Async APIs, JWT, OAuth2, HMAC, OpenAPI, Rate Limiting, Idempotency
- **Cloud & Infrastructure:** AWS (ECS, Lambda, CloudWatch, IAM, S3), GCP (Cloud Run, Pub/Sub), Docker, Kubernetes, GitHub Actions CI/CD
- **Databases:** PostgreSQL, MySQL, Supabase (RLS), MongoDB, Redis, Elasticsearch
- **Observability:** Prometheus, Grafana, OpenTelemetry, Tracing, Metrics, Logging
- **Other Expertise:** Payments, Identity, E-Signature, Multi-tenancy, Agile/Scrum

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and developed **multi-service API gateways in Python (FastAPI)**, integrating payments, identity, and e-signature providers with strong security and scalability.
- Implemented **advanced API security mechanisms** including JWT tokens, HMAC signatures, encryption, and rotating API keys, ensuring compliance with OWASP Top 10.
- Architected and optimized **PostgreSQL schemas with Supabase RLS**, delivering multi-tenant support, secure role-based access, and faster query performance.
- Built **Redis caching layers and idempotent retry systems**, improving fault tolerance, resilience, and handling traffic spikes without service degradation.
- Deployed services using **Docker and Kubernetes** on AWS and GCP, leveraging CloudWatch, Pub/Sub, and container orchestration for scalable cloud-native workflows.
- Implemented **GitHub Actions CI/CD pipelines** with automated testing, container builds, and zero-downtime deployments, accelerating delivery velocity.

- Established **observability practices** using Prometheus, Grafana, and OpenTelemetry, enabling real-time monitoring, distributed tracing, and alert-driven support.
- Delivered clear **OpenAPI documentation and lightweight SDKs (Python, TypeScript)**, improving developer adoption and accelerating partner integrations.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed **public REST/async APIs in Python with FastAPI**, enabling external partners to integrate payments, digital marketing, and analytics solutions seamlessly.
- Secured APIs with **OAuth2, JWT, HMAC signatures, and role-based access controls**, protecting sensitive financial and user data in compliance with enterprise standards.
- Implemented **PostgreSQL databases with advanced indexing, migrations, and partitioning**, improving query efficiency and ensuring high availability under load.
- Integrated **Redis caching, message queues, and rate limiting**, supporting real-time event processing, campaign analytics, and fraud prevention measures.
- Containerized services with **Docker and orchestrated deployments on Kubernetes clusters**, optimizing scalability and resource allocation across AWS/GCP environments.
- Automated **CI/CD pipelines with GitHub Actions**, introducing automated linting, testing, and rolling deployments that reduced operational errors significantly.
- Enhanced **logging, monitoring, and tracing** with Elastic Stack and Prometheus, providing full observability for troubleshooting and SLA compliance.
- Collaborated with cross-functional teams in **Agile/Scrum**, delivering feature-rich platforms on schedule while mentoring junior engineers on API design principles.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Designed **API-driven microservices in Python and Node.js**, integrating third-party providers for payments, authentication, and content management workflows.
- Developed secure **PostgreSQL and MySQL schemas**, implemented migrations, and optimized queries to handle millions of records with reduced latency.
- Implemented **NoSQL databases (MongoDB, Redis)** for caching, real-time data synchronization, and analytics dashboards supporting high-traffic platforms.
- Built **Dockerized environments** for consistent development and deployed services into **AWS ECS clusters** with automated scaling and health checks.
- Introduced **CI/CD pipelines with Jenkins and later GitHub Actions**, reducing release times and enforcing continuous integration best practices.
- Secured APIs and backend systems with **TLS, IAM roles, secrets management, and rate-limiting strategies**, improving compliance with industry standards.
- Implemented **async background jobs** with Celery and Redis, enabling reliable retry strategies, scheduling, and handling long-running tasks efficiently.
- Partnered with stakeholders to design **system architecture diagrams, data flows, and deployment strategies**, ensuring alignment with business objectives.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Built **Python and PHP-based backend services** to support digital content platforms, integrating secure APIs with third-party identity providers and CRMs.
- Developed and maintained **PostgreSQL schemas, queries, and stored procedures**, enabling faster reporting and supporting transactional workflows at scale.
- Integrated **Redis caching layers** to accelerate data retrieval and support burst traffic conditions during high-load business events.
- Deployed services with **Docker containers** and configured CI/CD pipelines for continuous delivery across AWS-hosted environments.
- Implemented **API access logging, monitoring, and metrics collection**, improving system observability and troubleshooting capabilities.
- Collaborated on **encryption strategies, key rotation, and security patching**, ensuring data confidentiality and system hardening.
- Participated in **Agile sprints**, handling development, bug fixing, and code reviews with senior team members in an international environment.
- Delivered solutions with **scalability and maintainability in mind**, laying the foundation for multi-tenant usage and future cloud migration.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in building **REST APIs in Python and PHP**, supporting e-commerce and digital marketing workflows for international clients.
- Developed **PostgreSQL queries and database schemas** while optimizing them for faster response times and reduced operational bottlenecks.
- Experimented with **Redis and MongoDB NoSQL solutions**, learning caching techniques and non-relational database modeling in real projects.
- Created **Docker environments for testing and development**, gaining early exposure to containerized workflows and modern DevOps practices.
- Contributed to **CI/CD pipeline automation**, writing scripts for builds and tests to improve code quality and delivery consistency.
- Supported **API security enhancements** with authentication, SSL/TLS configuration, and logging for monitoring suspicious activities.
- Participated in **bug fixing and QA cycles**, learning test-driven development and debugging practices in a collaborative setting.
- Documented **technical processes and integration guides**, helping improve team onboarding and external API consumer experience.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
 - Google Cloud Certified Professional Cloud Developer
 - Docker Certified Associate
-

PROJECTS

- **API Gateway Platform:** Built a multi-service API Gateway in FastAPI with JWT, HMAC, PostgreSQL, Redis, and Dockerized Kubernetes deployments on AWS/GCP.
- **Payment Integration Hub:** Orchestrated secure integration with regional and global payment providers, adding encryption, retries, and observability.
- **Identity & E-Signature Service:** Developed API-driven identity verification and e-signature workflows with strong authentication and API security controls.
- **Cloud Migration:** Migrated monolithic APIs into containerized microservices deployed on AWS ECS and GCP Cloud Run with CI/CD pipelines.
- **Real-Time Analytics:** Designed dashboards using SQL and NoSQL backends with Redis caching and async APIs for instant data visualization.
