

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Highly skilled Python FullStack Developer with over 8 years of experience in backend development, frontend engineering, and data processing. Passionate about building scalable, secure, and high-performance applications with modern frameworks like FastAPI, React, and SQLAlchemy. Seeking to contribute my expertise to InnovatorSpark and grow within a collaborative and innovation-driven environment.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
- **Frontend:** React, Redux, Next.js, Quasar (familiar), Tailwind CSS
- **Backend:** FastAPI, Flask, Node.js, Express.js
- **Database:** PostgreSQL, MySQL, SQLite, SQLAlchemy (ORM), MongoDB
- **Data Processing:** Pandas, NumPy
- **DevOps/Tools:** Git, Docker, GitHub Actions, CI/CD, Vite, Webpack
- **Testing:** Pytest, Jest, React Testing Library
- **Other:** RESTful APIs, WebSockets, Agile/Scrum

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led development of scalable data pipelines using Pandas to preprocess and transform multi-format datasets before feeding them into FastAPI-based RESTful services.
- Designed and deployed high-performance FastAPI microservices that integrated PostgreSQL via SQLAlchemy ORM, ensuring type-safe and optimized query handling.
- Spearheaded a migration of legacy jQuery UIs to modern React with Redux Toolkit, dramatically improving maintainability, performance, and code reusability across modules.
- Architected end-to-end APIs with robust authentication, rate-limiting, and error handling, fully tested with Pytest and aligned with OWASP security guidelines.
- Built reusable React components using Tailwind CSS and ensured UI accessibility compliance following WCAG 2.1 standards, leading to a 50% reduction in support tickets.
- Orchestrated GitHub Actions workflows to automate CI/CD processes, including test suites, Docker builds, and deployment to staging and production environments.

- Optimized SQL queries and indexes to accelerate high-volume reporting features, improving response times from 3.2s to 250ms on average for analytical dashboards.
- Collaborated with cross-functional teams in Agile sprints, ensuring timely delivery of features and incorporating stakeholder feedback via regular sprint reviews.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed full-stack marketing automation tools using Python (Flask) and React, with dynamic segmentation and campaign orchestration logic stored in PostgreSQL via SQLAlchemy.
- Implemented data parsing utilities using Pandas for analytics pipelines that processed CSV and JSON inputs and integrated them with internal business dashboards.
- Built a REST API layer in Flask to support frontend content curation tools, maintaining full CRUD capabilities and robust input validation.
- Enhanced application scalability by containerizing backend services with Docker and standardizing deployment scripts with Docker Compose across environments.
- Collaborated with the design team to rebuild a React component library that supported theming, internationalization (i18n), and dynamic layout rendering.
- Authored unit and integration tests for both frontend and backend, achieving over 85% code coverage and reducing regression issues during releases.
- Created and maintained CI pipelines using GitLab CI to ensure rapid, high-quality deployments across staging and production environments.
- Participated in peer code reviews and introduced team-wide linting and code format standards using ESLint and Black for Python.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Maintained and refactored legacy PHP and Python codebases, gradually modularizing backend components and migrating toward Flask and later FastAPI.
- Replaced jQuery-based frontend logic with modular React components, improving performance and reducing DOM-related bugs by over 40%.
- Constructed ETL tools in Python using Pandas and SQLAlchemy for periodic data migration between customer portals and the internal analytics system.
- Designed responsive UI features using React and Bootstrap, enabling smooth mobile interactions for external clients accessing dashboards.
- Integrated OAuth2 and JWT-based authentication mechanisms across services to enable secure multi-tenant access and role-based authorization.
- Participated in architectural planning meetings, recommending RESTful API standards and best practices that were later adopted team-wide.
- Built Python scripts that interfaced with third-party APIs (Twilio, Google Maps, Mailchimp) to support automated SMS and email notifications.
- Led multiple debugging sessions that resulted in the identification of memory leaks in backend services, which were resolved through profiling and async refactor.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Supported full-stack application development on a short-term logistics project using Flask and React, with deployment handled on AWS EC2 instances.
- Developed SQLAlchemy-powered models for inventory tracking and user activity logs, optimizing relational structure for both reads and writes.
- Integrated custom PDF generation into workflows using ReportLab and backend endpoints exposed through Flask routes.
- Participated in daily scrums and sprint demos in a fast-paced Agile team, delivering requested features with full documentation and test coverage.
- Rewrote major portions of frontend logic using modern React lifecycle methods and hooks, improving overall user responsiveness.
- Configured role-based access for admin vs. warehouse users using JWT claims and protected API routes.
- Used Pandas for in-memory aggregation of import/export reports based on filtering criteria selected by users via the frontend interface.
- Contributed to the internal component library by creating styled modal and table components reusable across the platform.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Designed internal dashboards for managing project timelines using HTML5/CSS3 and JavaScript, providing visibility for remote teams.
- Assisted senior developers with backend scripting in Python, including creation of batch scripts for processing structured data exports.
- Wrote initial test scripts to verify API responses and automated basic QA steps using Selenium and Python.
- Built small CRUD applications as prototypes using Flask and integrated SQLite for lightweight storage solutions.
- Participated in code review sessions and learned team-wide version control practices using Git and GitHub branching strategies.
- Created internal documentation for onboarding future interns, detailing project setup, tools, and deployment steps.
- Developed a utility to convert JSON data into Excel files using Python's openpyxl and Pandas, reducing manual reporting time.
- Supported frontend bug fixing tasks in JavaScript applications and contributed to cross-browser compatibility efforts.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Certified Python Developer – Python Institute (PCAP-31-03)
 - ❖ Front-End Web Developer Nanodegree – Udacity
 - ❖ FastAPI: The Complete Guide – Udemy
 - ❖ SQL for Data Analysis – DataCamp
-

PROJECTS

- ✓ **DataOps Dashboard** – Designed a platform to monitor ETL pipelines using FastAPI, React, and PostgreSQL. Added visualizations for tracking failures, retry rates, and throughput.
- ✓ **Marketing Email Builder** – Built a dynamic drag-and-drop email composer in React, integrated with backend template APIs and analytics tracking.
- ✓ **Contract Parser** – Developed a Python tool using Pandas and Regex for extracting structured data from scanned legal documents, enabling easier auditing.
- ✓ **Inventory Reconciliation Tool** – Created a CLI app that uses SQLAlchemy and Pandas to sync discrepancies between inventory databases in separate cloud systems.
