PROFESSIONAL SUMMARY

Senior Software Engineer with 9+ years of experience in **SaaS, ERP, and financial data platforms**, specializing in building scalable backend systems using **Python (v3.8–v3.12)**, **FastAPI (v0.70–v0.110)**, and modern **React (v16–v18)** ecosystems, with deep expertise in **REST API design**, **OAuth2/JWT security**, and **PostgreSQL (v11–v15)** data modeling, delivering high-performance, cloud-ready services through **Docker**, **CI/CD pipelines**, and production-grade observability practices across distributed systems.

TECHNICAL SKILLS

- **Languages:** Python (v3.8–v3.12), TypeScript (v4–v5), JavaScript (ES6+), SQL, HTML5, CSS3
- **Backend & APIs:** FastAPI, REST APIs, Flask, Django (basic), Odoo ORM, API Integration, Microservices
- **Security & Auth:** OAuth2, JWT, Token-based Authentication, Secure Coding, API Testing
- **Frontend:** React (v16–v18), Next.js (v12–v14), Redux Toolkit, Tailwind CSS, Material UI, Storybook
- **Databases & Data:** PostgreSQL (v11–v15), MySQL, MongoDB, Elasticsearch, Pandas, NumPy
- **Cloud & DevOps:** Docker, GitHub Actions, CI/CD Pipelines, Nginx, Linux, DigitalOcean, Vercel, Heroku
- **Testing & Quality:** Pytest, Jest, React Testing Library, TDD
- **Tools:** Git, JIRA, Postman, Figma, Confluence

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024 | Timișoara, Romania

- Led development of a modular **SaaS ERP platform** combining **FastAPI** services and **Odoo ORM**, designing flexible workflows for finance and inventory domains while enabling dynamic business rule configuration without redeployment.
- Designed and implemented high-throughput **REST APIs** using **FastAPI**, introducing structured validation and consistent error handling that reduced integration-related defects by **32%** across external client systems.
- Resolved a critical **authentication bug** where expired **JWT tokens** caused intermittent 401 loops, implementing token refresh strategies and middleware validation fixes that improved session reliability by **45%**.
- Engineered a **CI/CD pipeline** using **Docker** and **GitHub Actions**, enabling reproducible builds and automated deployments, reducing manual release effort by over **80%** and eliminating environment drift issues.
- Migrated legacy synchronous endpoints into **async FastAPI architecture**, optimizing I/O-heavy operations and improving API response latency by **38%** under high concurrency loads.
- Developed reusable **React (v17–v18)** components with **Redux Toolkit**, introducing shared UI patterns that reduced frontend duplication and accelerated feature delivery cycles across teams.
- Integrated **Elasticsearch** with Odoo reporting modules, resolving slow query bottlenecks and reducing complex report generation time by **60%** for finance users.
- Built resilient **data pipelines** using **Pandas and NumPy**, handling large datasets for campaign analytics while ensuring consistent transformations and validation across ingestion workflows.
- Diagnosed and fixed memory leaks caused by unbounded caching in Python services, introducing TTL-based cache invalidation and reducing production memory spikes by **50%**.

- Implemented background task processing with retry logic and idempotency safeguards, preventing duplicate financial transactions and improving system consistency under failure scenarios.
- Enhanced observability by adding structured logging and metrics dashboards, enabling faster incident triage and reducing mean time to recovery by **35%**.
- Mentored engineers through code reviews and architectural discussions, reinforcing best practices in **API design, security**, and scalable system patterns.

Syscom Digital Software Engineer

October 2019 – August 2021 | Bucharest, Romania

- Built **FastAPI ingestion services** to normalize third-party campaign data into **PostgreSQL and MongoDB**, enabling reliable analytics pipelines and reducing data inconsistencies across reporting layers.
- Resolved a recurring **data duplication issue** caused by retry failures in ingestion flows, implementing idempotent request handling and unique constraints that reduced duplicate records by **90%**.
- Developed CRM extensions using **Odoo ORM**, implementing advanced segmentation and automation workflows that improved campaign targeting efficiency by **28%**.
- Designed **Docker Compose environments** to standardize multi-service development setups, reducing onboarding time for new engineers and eliminating environment-specific bugs.
- Implemented frontend enhancements using **React (v16–v17)** and JavaScript, improving lead capture UX and increasing campaign conversion rates by measurable margins.
- Built fault-tolerant integrations with third-party email systems using token-based authentication and retry queues, ensuring delivery reliability under intermittent API failures.
- Refactored legacy Python services to modular structures, improving maintainability and reducing defect rates during feature expansion cycles.
- Introduced automated testing with **Pytest**, increasing confidence in deployments and reducing regression issues in shared modules.
- Modernized deployment processes by integrating CI/CD workflows, enabling faster release cycles with consistent build verification steps.
- Collaborated with product teams to translate evolving requirements into scalable backend solutions, ensuring long-term extensibility of the platform.
- Provided production support by diagnosing API failures and optimizing slow queries, reducing system downtime and improving stability across services.

Soft Build Software Developer

June 2016 – July 2019 | Timișoara, Romania

- Developed HR and payroll automation systems using **Python and Odoo ORM**, enabling structured financial workflows and improving compliance tracking across enterprise clients.
- Refactored legacy monolithic modules into modular architectures, reducing critical runtime failures by **45%** and improving long-term maintainability.
- Implemented reporting systems integrating **PostgreSQL views**, enabling accurate payroll reconciliation and improving reporting visibility for finance teams.
- Fixed a major **data inconsistency bug** caused by incorrect transaction rollbacks, implementing validation layers and audit logging to ensure data integrity.
- Built Docker-based deployment environments with automated backup strategies, improving system availability and reducing data loss risks during failures.
- Integrated third-party APIs such as Mailgun and Zoho, ensuring reliable communication workflows across departments with retry and fallback mechanisms.
- Optimized slow SQL queries using indexing and execution plan analysis, reducing report generation latency by **30%**.

- Developed internal tooling to automate payroll adjustments and reduce manual intervention in financial operations.
- Created onboarding documentation and training materials, reducing ramp-up time for new developers and improving team productivity.
- Collaborated closely with stakeholders to translate business requirements into stable technical implementations.

Decima Digital Software Developer

November 2015 – April 2016 | Tallinn, Estonia

- Developed **Python ETL pipelines** to process web analytics data into **PostgreSQL**, enabling BI dashboards for performance tracking and decision-making.
- Resolved complex **ERP migration failures** caused by schema mismatches, applying safe reconciliation strategies to restore relational integrity without data loss.
- Enhanced frontend behavior using JavaScript and jQuery, ensuring consistent UI functionality across legacy browser environments.
- Built CLI tools to repair corrupted financial records using ORM validation logic, improving data reliability across systems.
- Standardized deployment workflows using container-based environments, improving release consistency and reducing manual errors.
- Collaborated in retrospectives to improve coding standards and enforce consistent backend architecture practices.
- Implemented early CI processes for testing and deployment validation, laying groundwork for more advanced DevOps practices later.
- Improved logging and debugging mechanisms to help identify production issues faster.
- Supported migration of legacy modules to more maintainable structures, reducing technical debt over time.

Borna Technology Software Developer Intern

September 2014 – August 2015 | Tallinn, Estonia

- Assisted in developing backend scripts using **Python (v3.4–v3.6)** to support ERP data migration tasks, helping automate file transformations and reducing repetitive manual work across datasets.
- Worked with **Odoo ORM** to implement small feature updates and fix minor bugs in HR and procurement modules under guidance from senior engineers.
- Debugged data import issues caused by inconsistent CSV formats, adding basic validation checks that reduced failed imports and improved data reliability.
- Contributed to frontend updates using **JavaScript (ES5–ES6)**, HTML, and CSS, improving UI behavior in internal tools while learning browser compatibility constraints.
- Created simple test data scripts to help QA validate workflows, reducing setup time and making it easier to reproduce issues during testing cycles.
- Collaborated with senior developers during code reviews and debugging sessions, gaining practical experience in **clean coding practices** and structured problem solving.
- Participated in Git-based workflows and basic CI discussions, learning how code changes move through development and deployment stages.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014
