

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Python Developer with over 9 years of backend experience, specializing in designing scalable systems, real-time platforms, and cloud-native microservices. Seeking to leverage extensive Python expertise and cloud proficiency to contribute to cutting-edge gaming infrastructures and high-performance services

TECHNICAL SKILLS

- **Languages:** Python (Advanced), JavaScript, TypeScript, PHP, Bash
- **Frameworks:** FastAPI, Flask, Django, Node.js, Express
- **Cloud & DevOps:** AWS (ECS, Lambda, S3), Azure, GCP, Docker, Kubernetes, GitHub Actions
- **Database:** PostgreSQL, MySQL, MongoDB, Redis
- **Auth & Security:** OAuth2, OpenID Connect, Azure AD, JWT
- **CI/CD & Infra:** Terraform, Helm, Nginx, Git, Jenkins, Linux
- **Tools:** Pytest, Postman, Swagger/OpenAPI, VSCode, Sentry, Jira
- **Other:** RESTful API Design, Microservices Architecture, Event-Driven Systems, AI Integration

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and deployed scalable Python microservices using FastAPI and Celery for high-availability, latency-critical business processes powering real-time analytics.
- Led the design of internal APIs supporting 100K+ concurrent users with robust authentication via OpenID Connect and Azure AD integration.
- Implemented Kubernetes deployment strategies with Helm charts for zero-downtime CI/CD using GitHub Actions and AWS ECS Fargate.
- Developed automation pipelines for provisioning infrastructure using Terraform across multi-region AWS accounts, enabling faster rollout of services.
- Integrated Sentry and Prometheus to proactively monitor microservices performance, reducing incident response time by 30%.
- Delivered REST APIs and internal SDKs to support ML-driven automation tools for data enrichment and model deployment.

- Refactored legacy PHP services to modular Python architecture, reducing technical debt and increasing deployment speed by 3x.
- Collaborated cross-functionally with AI and frontend teams to deliver performant features in support of gaming and real-time data services.
- Worked in Agile/Scrum environments, providing mentorship and code reviews for junior developers across multiple time zones.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Engineered backend services in Python and Node.js to manage campaign delivery and analytics for high-volume marketing platforms.
- Created Dockerized microservices deployed via Kubernetes on Azure, reducing infrastructure cost by 25% while boosting scalability.
- Implemented CI pipelines with GitHub Actions and Azure DevOps for automatic testing and deployment across dev/staging/prod.
- Secured all public-facing APIs using OAuth2 and JWT standards, including rate-limiting and abuse detection systems.
- Deployed observability tooling (ELK Stack, Grafana) to monitor SLA-critical services used by enterprise partners in real-time.
- Designed schema and queries for PostgreSQL-based reporting engines capable of analyzing over 50M records weekly.
- Developed internal DevOps CLI tools in Python to automate cluster scaling and backup verification.
- Contributed to API versioning strategies that supported backward compatibility across multiple mobile app versions.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Designed full-stack web platforms for B2B SaaS products with backend APIs in Flask and frontend in Angular.
- Migrated monolithic PHP applications into service-oriented Python systems, improving maintainability and test coverage.
- Deployed applications to AWS using Docker and managed environments via ECS and CloudFormation templates.
- Conducted performance profiling and load testing of APIs to optimize latency-sensitive endpoints by 40%.
- Implemented RBAC using OAuth2 and integrated enterprise login via Azure Active Directory.
- Enhanced the reliability of notification and messaging services by introducing message queues (RabbitMQ, Redis).
- Automated deployment and backup workflows, ensuring disaster recovery policies and reducing manual operations.
- Documented all internal APIs using Swagger for frontend integration and third-party consumption.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Built RESTful APIs in Flask for e-commerce product inventory management and checkout pipelines.
- Developed real-time data synchronization services across distributed NoSQL (MongoDB) and relational (PostgreSQL) systems.
- Created Docker-based dev environments to streamline onboarding and code review cycles.
- Participated in sprint planning, technical grooming, and architecture discussions with senior staff.
- Delivered secure payment gateway integrations using Stripe and custom token-based encryption methods.
- Built testing infrastructure using Pytest and coverage reports that improved QA confidence.
- Collaborated with frontend teams to build internal tools using React and Redux.
- Reduced API latency by 20% through query optimization and Redis caching mechanisms.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in the design of Python-based tools to automate data extraction and reporting tasks.
- Implemented cron-based background scripts to generate scheduled PDF reports and email them to clients.
- Wrote unit and integration tests for backend logic, improving overall codebase coverage to over 85%.
- Supported migration of legacy code from VB to Python and PHP, ensuring feature parity.
- Participated in UX discussions to shape web interfaces for operational dashboards.
- Developed SQL queries for customer segmentation and behavioral reporting.
- Managed Linux VPS and set up automated deployment pipelines using Bash scripting.
- Collaborated on cross-functional hackathon team to deliver internal CMS prototype within 72 hours.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **AWS Certified Developer – Associate**
- ❖ **Microsoft Certified: Azure Developer Associate**
- ❖ **Python for DevOps (Udemy)**
- ❖ **Designing Distributed Systems by Microsoft (edX)**

PROJECTS

- ✓ **Gaming Analytics Platform (Sensidev)**
Developed a real-time gaming analytics backend in Python (FastAPI) processing live player actions with event sourcing, deployed on AWS EKS, integrating with Redis and Kafka for high-throughput pipelines.

✓ **Secure Auth Gateway**

Engineered a centralized authentication service with OpenID Connect support, used across microservices to enforce SSO via Azure AD, enabling unified user management and compliance tracking.

✓ **Infra-as-Code DevOps Tool**

Built a CLI utility in Python to automate AWS resource provisioning using Terraform, aiding non-DevOps teams in launching sandbox environments with pre-approved configurations.
