

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Highly experienced Backend Developer with over 9 years of experience building resilient, scalable, and performant backend systems using Golang, Python, SQL, and AWS. Proven expertise in database design, microservices, cloud-native infrastructure, and high-volume data processing. Seeking to contribute to a dynamic, remote-first team on cutting-edge backend projects in a contract role.

TECHNICAL SKILLS

- **Languages:** Golang, Python, SQL, TypeScript, JavaScript, Java (basic)
- **Databases:** PostgreSQL, MongoDB, MongoDB Atlas Search, Snowflake, MySQL
- **Cloud & DevOps:** AWS (ECS, S3, Lambda, API Gateway), Terraform, GitHub Actions, Docker, Kubernetes
- **Search Engines:** OpenSearch
- **Tools & Platforms:** JIRA, Splunk, Slack, Git, GitHub, Bitbucket, Jenkins
- **Frameworks:** FastAPI, Flask, Django, Express, Node.js
- **Testing:** PyTest, GoMock, Postman, Cypress
- **Other:** RESTful API design, CI/CD pipelines, Event-driven architecture

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Architected and implemented scalable microservices in Golang and Python for a high-load SaaS platform handling millions of requests monthly with AWS infrastructure.
- Designed PostgreSQL and MongoDB schemas optimized for read/write throughput, reducing query time by 60% across core endpoints.
- Built data pipelines to ingest, clean, and transform terabytes of data into Snowflake for real-time analytics and reporting.
- Integrated MongoDB Atlas Search for fuzzy-matching user search with sub-100ms latency, improving discovery features for clients.
- Deployed microservices via ECS and Lambda using Infrastructure-as-Code with Terraform, ensuring zero-downtime rollouts.
- Automated testing using PyTest and GoMock, increasing test coverage by 45% and reducing regression bugs.

- Set up GitHub Actions workflows for build/test/deploy pipelines, cutting manual DevOps effort by 75%.
- Monitored backend health and performance using Splunk and AWS CloudWatch, proactively resolving scaling issues.
- Participated in pair programming sessions via HackerRank to mentor junior developers and review architectural changes.
- Used Slack and JIRA to collaborate with distributed team across 4 time zones, ensuring smooth sprint planning and delivery.
- Designed event-driven modules using SQS and SNS to decouple services and handle asynchronous workflows.
- Contributed to internal backend standards and documentation, helping to onboard new engineers efficiently.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built REST APIs using Python (FastAPI) and Golang that supported complex customer interactions and automation workflows.
- Led migration from MySQL to PostgreSQL to improve data consistency and indexing for analytics-heavy dashboards.
- Developed secure authentication systems and role-based access controls using JWT and OAuth2.
- Containerized legacy applications with Docker and deployed on AWS ECS, improving uptime and maintainability.
- Created dynamic aggregation and filtering logic over large MongoDB collections, improving reporting engine speed.
- Introduced OpenSearch for user behavior log indexing and visualization, enhancing operational visibility.
- Designed CI/CD workflows using GitHub Actions for development and staging environments.
- Implemented ETL scripts to load marketing analytics data from third-party platforms into Snowflake.
- Developed custom Terraform modules for automating infrastructure provisioning and AWS networking.
- Enhanced API observability with structured logging and error tracking via Splunk integration.
- Used JIRA to manage sprints and track deliverables within Agile Scrum cycles.
- Coordinated with QA engineers to build automated integration and smoke tests for production confidence.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built and maintained multiple Python-based microservices interacting with MongoDB and PostgreSQL.
- Worked with legacy PHP systems to extract, transform, and migrate data into modern APIs and services.
- Developed complex SQL queries and optimized indexes, significantly improving report generation times.
- Maintained Terraform configurations for internal AWS infrastructure, streamlining staging deployments.
- Collaborated with frontend developers to define RESTful API contracts and ensure backward compatibility.
- Introduced automated unit and integration test suites for Python services, raising coverage to 80%+.

- Used GitLab CI/CD for pipeline automation and Docker container builds.
- Monitored application performance using Splunk dashboards and optimized slow routes via profiling.
- Documented system architecture and database flows to ease cross-team onboarding.
- Built real-time logging service with OpenSearch integration for system events and audit trails.
- Engaged in daily Slack standups and monthly sprint retrospectives with distributed team.
- Helped establish coding guidelines and peer-review process within the backend team.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Assisted in the development of Python Flask APIs backed by PostgreSQL for financial reporting applications.
- Participated in AWS cloud migration project, provisioning EC2 and S3 buckets via Terraform scripts.
- Built frontend integrations with REST APIs and templating systems to support legacy dashboard apps.
- Maintained MongoDB replica set for internal analytics tools and implemented data backup strategies.
- Set up Jenkins pipelines for backend test and deploy automation.
- Participated in daily Agile ceremonies and demoed features bi-weekly to product owners.
- Wrote automated tests and fixtures to ensure accurate business logic implementation.
- Supported dev environment provisioning with Docker and Git versioning.
- Assisted in translating analytics requirements into backend data models.
- Contributed to refactoring legacy endpoints to match API versioning standards.
- Reviewed pull requests and merged into production after manual QA sign-off.
- Documented technical decisions and edge cases in Confluence.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Collaborated on the development of backend features using Python and PostgreSQL.
- Gained hands-on experience deploying apps to AWS and monitoring with basic shell scripts.
- Developed internal CLI tools for JSON and CSV data manipulation.
- Worked on MongoDB data migrations as part of backend API restructuring.
- Participated in QA cycles and fixed assigned bugs from JIRA.
- Used Git and Bitbucket for version control and pull requests.
- Shadowed senior developers in sprint planning and estimation processes.
- Built simple REST endpoints and participated in integration testing.
- Created internal documentation for microservices developed during internship.
- Attended weekly technical learning sessions and pair programming practice.
- Learned Agile methodology and participated in sprint reviews.
- Supported junior teammates with debugging and environment setup.

EDUCATION

Tallinn University

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate (DVA-C02), 2023
 - ❖ Terraform Associate Certification, HashiCorp, 2022
 - ❖ MongoDB for Developers, MongoDB University, 2022
 - ❖ Golang Microservices Mastery, Udemy, 2023
 - ❖ Snowflake Data Engineering & Administration, Coursera, 2023
-

PROJECTS

Real-Time Analytics Engine for Marketing Automation (Sensidev)

- Built a scalable data ingestion pipeline using Python and AWS (S3, Lambda, Kinesis) that streamed user events to Snowflake for live reporting.
- Designed and implemented Golang-based services to perform real-time customer segmentation.
- Indexed user interaction logs into MongoDB Atlas Search and OpenSearch for rapid filtering in admin dashboards.

Microservice Infrastructure Automation (Syscom Digital)

- Led a project to refactor and modularize Terraform IaC templates for AWS ECS clusters, improving reusability across environments.
- Automated environment-specific GitHub Actions workflows for deploy/test/release pipelines.
- Integrated Slack alerts and JIRA tickets into CI workflows for improved release transparency.
