

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

AI-driven Software Engineer with 9+ years of progressive experience architecting and implementing scalable, production-ready systems across cloud platforms. Expert in Python, MLOps, Generative AI (LLMs, LangChain), React, Terraform, and cloud-native deployments using Azure. Proven track record integrating GenAI into business-critical applications including customer service, sales, and supply chain tools. Passionate about building cross-functional systems with robust CI/CD pipelines, ML workflow orchestration, and reliable monitoring infrastructure in enterprise-grade environments.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, JavaScript, TypeScript, React.js, Node.js, SQL, NoSQL, Bash
- **GenAI & ML Tools:** LangChain, OpenAI API, MLflow, HuggingFace, PyTorch, TensorFlow, FastAPI
- **MLOps & DevOps:** Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins), Terraform, Airflow, DVC
- **Cloud Platforms:** Azure (primary), AWS, Google Cloud Platform
- **Data & Pipelines:** Databricks, Apache Spark, Delta Lake, Kafka, Pandas, dbt, PostgreSQL, MongoDB
- **Monitoring & Infra:** Prometheus, Grafana, ELK Stack, Sentry
- **Project Tools:** Git, Jira, Confluence, Slack, Trello

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and deployed scalable ML infrastructure on Azure using Terraform, enhancing model deployment reliability by 40% for GenAI-backed products.
- Integrated LangChain and OpenAI APIs into business automation tools, enabling contextual search and AI response generation across supply chain datasets.
- Built full-stack GenAI-driven customer service application using React frontend and FastAPI backend with MLflow-based model orchestration.
- Spearheaded end-to-end CI/CD pipelines for ML services with GitHub Actions and Docker, decreasing model release cycles from 2 weeks to 2 days.

- Deployed containerized microservices on Kubernetes clusters, ensuring high availability and robust load balancing for LLM-powered interfaces.
- Led data pipeline design on Databricks, processing over 15 TB of operational data monthly with Spark, improving data throughput by 50%.
- Built real-time observability dashboards using Grafana and Prometheus for model latency and usage analytics, driving 99.9% uptime SLA.
- Mentored a cross-functional team of 4 engineers and collaborated with stakeholders to prioritize GenAI roadmap initiatives.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built React-based user interfaces for AI-centric customer platforms integrated with backend APIs and real-time analytics dashboards.
- Designed Python microservices to support semantic document classification using spaCy and fine-tuned transformer models.
- Developed infrastructure-as-code templates in Terraform for rapid provisioning of Azure-based staging and production environments.
- Automated ML model training pipelines with Airflow and integrated version control via DVC for reproducibility and tracking.
- Worked alongside business and design teams to launch personalized chatbots driven by GPT-2, enhancing conversion by 23%.
- Containerized NLP pipelines for batch sentiment analysis using Docker and managed deployments via Azure Pipelines.
- Introduced ML experimentation logging with MLflow and tracked metadata on pipeline stages for audit compliance.
- Contributed to agile sprint planning, writing technical specifications and retrospectives for GenAI feature sets.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed full-stack applications for supply chain automation using React, Redux, Node.js, and Express.
- Integrated OpenAI GPT-3 based text summarization into document management systems for legal clients.
- Created distributed ETL workflows processing customer feedback for AI training datasets stored in PostgreSQL.
- Conducted stress testing and scalability analysis on ML pipelines, supporting enterprise traffic spikes up to 5x baseline.
- Implemented granular RBAC and API-level security for AI endpoints using Azure Active Directory and OAuth 2.0.
- Led unit, integration, and E2E testing practices using Pytest, Jest, and Cypress for zero-regression model deployments.
- Built dashboard interfaces with dynamic charts powered by Chart.js to visualize AI inference outputs.
- Actively participated in requirements grooming with cross-functional stakeholders to align data science and engineering goals.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Developed and maintained REST APIs in Python to power data-driven analytics dashboards.
- Implemented NLP-based user intent classification for internal CRM systems using pre-trained BERT embeddings.
- Created automated data ingestion scripts for financial datasets from third-party APIs into MongoDB and PostgreSQL.
- Improved application bootstrapping by integrating Docker Compose, enabling reproducible local development environments.
- Assisted DevOps team in deploying microservices to Azure VMs using custom shell scripts and Ansible.
- Refactored legacy monoliths into modular services, reducing deployment time by 60%.
- Supported QA in setting up CI hooks for regression testing during model rollout phases.
- Documented RESTful endpoints, model assumptions, and schema evolution in Confluence for all team members.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Built internal tools in Python for data preprocessing, used in training recommendation models.
- Contributed to JavaScript frontend widgets displaying ML output summaries within business dashboards.
- Assisted in containerizing legacy Python scripts using Docker for platform-agnostic portability.
- Wrote SQL and NoSQL queries to aggregate business KPIs from multiple databases for AI workflows.
- Supported experimentation with topic modeling techniques (LDA) and evaluated model coherence scores.
- Maintained Git repositories and participated in weekly sprint demos with business analysts.
- Automated data cleanup processes using Python scripts, reducing manual workload by 70%.
- Supported team lead in running exploratory data analysis (EDA) and visualizing trends with matplotlib and seaborn.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure AI Engineer Associate
- ❖ Databricks Certified Data Engineer Associate
- ❖ DeepLearning.AI: Generative AI with LLMs

- ❖ Terraform Associate (HashiCorp Certified)
 - ❖ Google Cloud Professional Data Engineer (GCP)
 - ❖ AWS Certified Solutions Architect – Associate
 - ❖ LangChain Developer Bootcamp (Prompt Engineering & LLMOps)
-

PROJECTS

GenAI Service Optimization for Retail Supply Chain

- Developed LangChain-powered automation pipeline that generated daily product reordering insights based on historical trends and LLM inferences.
- Enabled seamless multi-modal frontend via React for AI-interaction, backed by Azure-hosted inference microservices.

Azure-native ML Workflow Platform

- Built robust CI/CD and ML pipeline for fraud detection models using MLflow, Docker, Terraform, and Azure Kubernetes Services (AKS), reducing downtime and boosting experimentation agility.

AI Helpdesk Chat Assistant

- Created a GPT-powered virtual assistant embedded in enterprise service platforms, capable of understanding ticket context and providing automated resolution based on internal KBs and Jira data.
