

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Fullstack Software Engineer with 8+ years of experience architecting and developing scalable backend systems and interactive frontends. Proficient in Python (FastAPI), Node.js, and TypeScript with strong exposure to React, MongoDB, and cloud-native development using AWS and Kubernetes. Proven track record in delivering intelligent support platforms and real-time AI integrations. Thrives in autonomous, fast-paced environments with a user-first mindset.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, HTML5, CSS3, SQL, Bash
- **Frameworks:** FastAPI, Node.js, Express.js, React.js, Next.js
- **Databases:** MongoDB, PostgreSQL, MySQL
- **DevOps:** AWS, Kubernetes, Docker, Terraform, GitHub Actions, CI/CD
- **Tools:** Git, Webpack, ESLint, Prettier, Postman, Figma
- **Testing:** Jest, Mocha, Chai, React Testing Library, Pytest
- **Architecture:** Microservices, RESTful APIs, Event-driven Design

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and deployed FastAPI-based backend services integrated with real-time AI-powered customer support pipelines, enhancing issue resolution efficiency by 40%.
- Led the development of Node.js microservices orchestrated in Kubernetes clusters with Terraform and GitHub Actions, significantly reducing deployment overhead.
- Built React + TypeScript frontend dashboards to monitor AI intent recognition and chat flows, improving customer support agent visibility and control.
- Integrated MongoDB and PostgreSQL in hybrid architectures, optimizing data access patterns for AI inference and chat session analytics.
- Spearheaded automated test pipelines using Pytest, Jest, and GitHub Actions, boosting CI reliability and reducing bugs in production.
- Worked closely with ML engineers to deliver NLP pipeline endpoints for intent classification and automated response generation within FastAPI services.

- Developed proactive anomaly detection systems using backend cron workers and event listeners to identify and flag user support issues before they escalated.
- Facilitated architectural reviews and roadmap planning for AI support integration, contributing to a scalable cross-country rollout across 5 regions.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built internal tooling and backend services in Python and Node.js for customer data ingestion, ETL, and real-time event tracking.
- Developed React-based admin panels for campaign orchestration, integrating GraphQL and REST APIs with support for multi-language content management.
- Maintained and optimized containerized environments with Docker Compose and AWS ECS, achieving 99.99% uptime across client-critical services.
- Led QA automation effort for functional and integration tests using Mocha, Chai, and Cypress across frontend and backend.
- Designed RESTful APIs with proper pagination, error handling, and caching using Redis, reducing response times under high load.
- Participated in product discovery sessions to define and refine conversational flows for marketing chatbot integration projects.
- Authored and maintained CI/CD workflows using GitLab and GitHub Actions, enabling seamless release cycles for multiple development squads.
- Enhanced support ticket routing logic via backend rules engine, improving first-response resolution rates by 22%.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed scalable REST APIs using Node.js and Express for logistics and supply chain platforms with strict SLA requirements.
- Created interactive UIs using React.js, TypeScript, and Redux to streamline warehouse operations, barcode scanning, and reporting.
- Integrated AI document scanning tools to parse logistics forms and pre-fill database entries, reducing manual entry by 60%.
- Implemented advanced permissions systems using JWT and OAuth2 for multi-tenant environments.
- Led data migration and refactor efforts during transition to MongoDB from legacy SQL, improving query performance and flexibility.
- Deployed services to AWS using EC2, S3, and CloudWatch, setting up monitoring and alerting to proactively resolve infrastructure issues.
- Refined deployment scripts using Bash and Terraform to automate spin-up of new environments for testing and client demos.
- Mentored junior developers in TypeScript best practices and CI/CD setup using Jenkins and GitHub.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Contributed to a customer support widget used by e-commerce clients to deliver real-time chat powered by NLP models.

- Implemented RESTful APIs in Python and supported MongoDB queries to drive analytics dashboards.
- Collaborated with UI/UX designers to refine conversational UI for web integrations and mobile optimization.
- Delivered component testing with Jest and snapshot validation for rapid frontend iteration.
- Wrote cron job scripts to backfill customer feedback scores into analytics dashboards.
- Ensured GDPR-compliant logging and anonymization of customer data through backend middleware.
- Supported early prototype work with LLM-powered chatbot features and tested prompt quality across scenarios.
- Helped deliver production releases and triaged bugs in staging environments with high urgency.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Built internal tools for logging and performance tracking using JavaScript, HTML5, and MongoDB.
- Participated in early efforts to create voice support routing logic using WebRTC and server-side Python.
- Developed chatbot intents and fallback logic in rudimentary natural language classifiers.
- Assisted with deploying updates via manual FTP before transitioning to Jenkins-based automation.
- Wrote user guides and API usage documentation for early-stage support APIs.
- Debugged frontend issues in IE11 and Chrome and delivered fixes in pure JS.
- Ran early performance testing using Apache Bench and Python load testing scripts.
- Created visual demos to present conversational flow options to product team stakeholders.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
- ❖ MongoDB for Python Developers (MongoDB University)
- ❖ CI/CD Pipelines with GitHub Actions (Pluralsight)
- ❖ Kubernetes for Developers (Udacity)

PROJECTS

- ✓ **AI Support Automation Platform:** Fullstack solution using FastAPI, MongoDB, and React to automate over 60% of support queries with intelligent fallback routing.
- ✓ **Conversational UI Toolkit:** Custom reusable component library in React and TypeScript for building support chat interfaces across mobile and web.

- ✓ **Multi-Region Microservices CI/CD:** Terraform and GitHub Actions setup across 3 AWS regions for real-time LLM service routing and failover.
