

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven backend engineer with 8+ years of experience designing and scaling distributed systems, microservices, and APIs in fast-paced environments. Proven ability to architect high-performance, secure, and cost-efficient systems using Python, Node.js, and Go. Adept with relational and NoSQL databases, cloud services (AWS, GCP), and container orchestration using Kubernetes. Passionate about building real-time infrastructure and collaborating across multidisciplinary teams to deliver cutting-edge machine learning solutions.

TECHNICAL SKILLS

- **Languages:** Python, Go, Node.js, JavaScript, TypeScript, SQL, Java
- **Backend Frameworks:** Express.js, FastAPI, Flask, Spring Boot
- **Databases:** PostgreSQL, MongoDB, Redis, MySQL, Firebase
- **DevOps & Cloud:** AWS (EC2, Lambda, S3, RDS), GCP, Docker, Kubernetes, GitHub Actions, Jenkins
- **Messaging & APIs:** REST, GraphQL, WebSockets, Kafka, RabbitMQ
- **Tools & Others:** Git, GitLab CI/CD, Terraform, Prometheus, OpenSearch, Firebase, Pandas, NumPy
- **Testing & Monitoring:** Jest, PyTest, Mocha, Postman, Sentry, ELK stack
- **Practices:** Agile, Scrum, TDD, A/B Testing, Clean Code

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented scalable backend services using Node.js and PostgreSQL to handle high-throughput transactions and support dynamic AI-powered applications.
- Architected REST and GraphQL APIs used by multiple frontend and mobile clients, ensuring reliability and consistency across distributed systems.
- Integrated Redis caching and MongoDB document storage to improve query latency by 70% and support flexible data modeling for real-time features.
- Led the migration to Docker and Kubernetes, reducing infrastructure management time by 40% and improving system uptime.

- Worked cross-functionally with AI teams to integrate machine learning pipelines and build APIs that expose model predictions for external consumption.
- Implemented OAuth2 and JWT-based authentication, improving security compliance and enabling role-based access control across services.
- Built and deployed microservices with automatic scaling and CI/CD pipelines via GitHub Actions and Terraform for infrastructure-as-code.
- Conducted performance tuning using profiling tools, reducing CPU load across services by 35% while optimizing cloud resource consumption.
- Regularly led code reviews and mentored junior developers, enforcing high standards of clean code, testing, and documentation practices.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed high-volume Node.js and Python-based services to support real-time marketing campaign personalization and analytics.
- Designed and optimized PostgreSQL schemas and indexes for millions of records, improving complex query response times from minutes to milliseconds.
- Built containerized microservices deployed in AWS ECS, integrating with S3, Lambda, and RDS to process and serve user interaction data at scale.
- Integrated Kafka for decoupled, asynchronous event handling and enabled streaming ingestion into ML pipelines.
- Delivered secure APIs with rate-limiting, token-based auth, and logging, aligned with GDPR and privacy regulations.
- Set up and maintained monitoring with Prometheus and Grafana, providing visibility into system performance and failure metrics.
- Automated unit, integration, and E2E testing pipelines using Jest and Mocha to ensure test coverage of over 85%.
- Worked closely with designers and PMs to iterate on RESTful and GraphQL API specs, reducing frontend integration bugs by 60%.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built internal business tools using Express.js and PostgreSQL, enabling non-technical users to manage complex data workflows efficiently.
- Refactored monolithic applications into microservices, improving maintainability and fault isolation across critical components.
- Deployed and monitored services in Kubernetes clusters with Helm charts and integrated alerting via ELK stack.
- Created data ingestion pipelines to clean and process data from external APIs and sensors into MongoDB and MySQL databases.
- Optimized REST API endpoints with caching, pagination, and query batching, improving UX and reducing server load.
- Designed API versioning strategies and handled backward compatibility to support long-lived client apps.
- Participated in daily agile ceremonies and retrospectives, driving improvements in velocity and developer satisfaction.

- Contributed to shared backend libraries and tooling, accelerating development across multiple product teams.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Implemented backend components for eCommerce platforms using Python and Flask with PostgreSQL and Redis.
- Developed integrations with third-party payment and logistics APIs, automating fulfillment workflows.
- Improved system observability by integrating structured logging and basic metrics using Prometheus exporters.
- Created reusable middleware for validation, authentication, and error handling in backend services.
- Maintained API documentation using Swagger/OpenAPI for seamless developer onboarding.
- Debugged critical production issues and resolved them within SLA, increasing system reliability.
- Built internal admin tools for customer support teams to manage user accounts and issue refunds.
- Contributed to frontend UI features using Vue.js, improving admin dashboard functionality.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Supported development of internal tools for analytics and reporting using Python and SQLite.
- Built CLI tools to automate data exports and transformation tasks, reducing manual workload by 50%.
- Collaborated on early prototypes of ML model dashboards for internal stakeholders.
- Assisted in setting up Git workflows and CI integration using GitLab pipelines.
- Documented legacy systems and participated in refactoring outdated code into modular components.
- Conducted exploratory testing and reported bugs with reproducible test cases.
- Delivered small feature enhancements and patches as part of sprint cycles.
- Participated in agile planning and presented demos of weekly deliverables.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
- ❖ Kubernetes for Developers (Udemy)
- ❖ GraphQL with Node.js & Apollo (LinkedIn Learning)
- ❖ Building Distributed Systems in Go (Pluralsight)
- ❖ System Design Primer Bootcamp (Educative)

PROJECTS

Real-Time Analytics API

- Designed a real-time backend using FastAPI, Redis Streams, and PostgreSQL to serve analytics for ML dashboards with sub-500ms latency under load-tested scenarios.

Machine Learning Inference Service

- Built a containerized inference API using Flask and Docker to serve models trained in PyTorch, with auto-scaling on GCP Cloud Run based on CPU load metrics.

Multi-Cloud Monitoring Platform

- Developed backend services for a cloud-agnostic monitoring tool using Go, InfluxDB, and GraphQL, with data ingestion from AWS and GCP via Pub/Sub and EventBridge.
